Chapter 1

INTRODUCTION

Background of the Study

Religious education plays a crucial role in shaping the moral and ethical behavior of elementary pupils. It goes beyond being just a subject for Filipino pupils, as it instills values like respect, duty, and order. These values help learners interact well with others and fit into their communities. Paul et al.,(2025) found that Christian education at the Loakan Baptist Church Christian Education Center reduces negative behavior by promoting religious understanding, acceptance, and values. Moreover, the research by (Chansa, T. 2023) on the Impact of religious education on pupils' behavior: A case study of selected secondary schools in Lusaka District, Zambia, has attested that the role of Religious Education prepares learners to be morally upright and influences them to fear God and respect fellow human beings. Additionally, the findings revealed that the teaching of religious education is a critical component that enables school-going youth to acquire morality by instilling the proper attitudes toward social obligations and responsibilities in society. These studies suggest that teaching learners about religion alongside their schoolwork helps them behave better. Helping them develop strong morals at school and in their personal lives.

Studies from various countries show that religious education positively contributes to pupils' behavior and moral development. In Romania, Coman et al. (2024), in their study titled "How Religion Shapes the Behavior of Students: A Comparative Analysis Between Romanian Confessional and Non-Confessional Schools," found that

pupils enrolled in religious schools and who actively practiced their faith were less likely to display aggressive or delinquent behavior, and were more inclined to collaborate and show care for others. Similarly, Han and Carlo (2021) reported that religious education strengthens adolescents' self-discipline and moral decision-making, lowering their tendency to engage in harmful or risky behaviors. In the Philippine context, elementary pupils who receive continuous religious instruction also tend to demonstrate more respectful, cooperative, and caring interactions with their classmates. Supporting this, Kadafi et al. (2021) found that religious and spiritually based virtual media significantly increased pupils' helpfulness, with prosocial behavior scores in the experimental groups rising by an average of 11.79 points.

These findings suggest that religious education not only teaches moral principles but also supports pupils' religious and moral formation, shaping not only belief but also daily behavior. This aligns with Pope John Paul II's strong emphasis that religious formation must remain faithful to the Church's mission while adapting to modern realities an approach that helps pupils internalize values and express them through positive conduct (Sanchez, 2025).

Religious education teaches learners how to get along with others, work together, and respect teachers and other adults, which helps decrease behavior problems (Purnama et al. 2022). However, challenges remain in consistently implementing the curriculum and keeping pupils engaged Ogula (2024). Despite religious education, some pupils still struggle to grasp moral values fully. This affects their behavior and how they interact with others. Families and communities need to be involved in religious education,

and schools should collaborate with them (Kurniawan et al. 2022). According to Teixeira et al. (2022) Teachers' attitudes and teaching methods, such as storytelling and group discussions, help young learners learn moral values even more effectively. Research indicates that positive school environments shaped by religiosity are associated with reduced bullying and better pupils-teacher relationships, thereby enhancing the benefits of religious education (Hannam et al. 2020).

Thus, religious education helps determine youth crime and fosters a culture of respect and kindness Smith (2023). Ogula (2024) and Rochmat et al. (2024) state that teachers often observe that religious education helps pupils act better, develop positive attitudes, and feel more responsible both at school and at home. Families and communities must engage in religious education and align it with school efforts (Kurniawan et al. 2022).Pupils at Saint Michael College of Caraga in Nasipit face behavioral issues that indicate a need for strengthened Religious Education (REED) as part of the Elementary Curriculum. Based on interviews with teachers, it has been observed that challenges remain in delivering Religious Education, they find it hard to help pupils connect the lessons to their daily lives and to keep students from different religions fully engaged.

Teachers also shared that although non-Catholic pupils join REED activities, some feel disconnected because the lessons mainly follow Catholic teachings. These observations highlight the need to examine how effectively the components of religious education faith understanding, participation in worship and sacraments, and Christian morals affect pupils' daily behavior in the classroom, regardless of religion. Thus, this

study aims to determine how religious education as an academic subject influences the classroom behavior of Grades 3–6 pupils and which of the aforementioned components contributes most to improving their behavior. These interview-based observations reveal a gap in understanding the underlying reasons behind these behaviors. While much has been written on the importance of religious education in teaching morals, character, and proper conduct, there is limited research on how specific aspects such as faith understanding, participation in worship and sacraments, and Christian morals affect pupils' behavior in the classroom at Saint Michael College of Caraga. Addressing this gap is essential to the school's mission of producing graduates who are both responsible citizens and people of faith. It is also important for curriculum development, character formation, and improving classroom behavior.

The goal of this study is to determine the influence of religious education on the behavior of elementary pupils at the SMCC Triangulo Campus. The findings of this study on Religious Education can benefit the SMCC academic community in several ways.

Teachers of Religious Education can use the results to improve their lessons and help pupils develop stronger moral and spiritual behavior through class activities.

School administrators can design programs and activities that reinforce learning in Religious Education and support teachers in creating a faith-centered learning environment.

Parents can reinforce the lessons learned in school at home and guide their children in applying Christian values in daily life. Pupils can become more disciplined,

respectful, and compassionate, connecting what they learn in Religious Education to their behavior and daily actions.

The SMCC academic community as a whole can promote a culture of faith, morality, and respect, encouraging collaboration between teachers, parents, and pupils to strengthen both character and community life.

Review of Related Literature

This chapter examines key books and research papers relevant to the present study, "The Influence of Religious Education on the Classroom Behavior of the Elementary Pupils." The researcher reviewed related literature, online studies, and other academic sources to clarify the concepts, findings, and gaps that support this investigation. Each part of the literature is discussed to show how religious education, as an academic subject, may influence the classroom behavior of elementary pupils.

The study is anchored on the Catechism of the Catholic Church (CCC), which upholds three key factors that shape moral and spiritual formation: Faith and Understanding, Responsibility and Participation, and Respect for the Human Person and Good and Evil Acts. These factors guide the present research in identifying how religious education influences pupils' behavior in the classroom.

Classroom behavior strongly influences pupils' school performance. Dulay (2020) examined how pupils' interactions with peers, participation in activities, and communication with teachers and other adults in authority affect their academic success. Dulay (2020) emphasized that cooperative behavior, respect, and active participation contribute to a positive and supportive classroom environment. In contrast, disrespectful,

off-task, or argumentative behavior toward teachers or classmates can hinder learning and slow academic progress. Dulay's (2020) work highlights the importance of understanding the link between classroom behavior and learning outcomes, since teachers can develop more effective strategies to improve behavior and promote success.

Similarly, pupils' actions in class affect both academic performance and personal growth. Dimacangun and Sambo et al. (2024) stated that pupils' behavior toward peers, classroom activities, educators, and authority figures significantly impacts academic achievement. Their research at Abaga Integrated School in the Philippines found that pupils who behaved well during class were more likely to succeed academically. However, they also noted that behavior toward peers, educators, and authority figures did not always significantly predict academic performance. Adulay (2020) supported this by showing that mixed classroom behaviors such as inattentiveness and talking over peers reduced engagement, though not consistently academic results. These findings suggest that responsible behavior and active participation in classroom activities are stronger indicators of academic success than mere compliance or social interaction, highlighting the need for teachers and administrators to understand behavioral influences in order to promote positive conduct and improve performance (Mafie et al., 2024).

Educators today recognize that teaching academics alone is not enough to develop responsible and moral pupils. Religious education, as part of holistic schooling, nurtures pupils' values, conscience, and character alongside academics. Many schools are facing worsening behavior and declining morals, making religious education an important avenue for guiding pupils toward self-discipline, respect, and positive classroom conduct.

Granero-Gallegos et al. (2020) argued that this situation calls for renewed attention to teaching religion in schools. Law-Davis (2023) likewise stated that religious education helps learners become respectful, empathetic, and self-controlled, improving social interactions and moral decision-making.

Research in different regions has also established that religious education influences pupils' moral behavior. In several European countries, including Ireland and Germany, religious education is integrated into school systems (Hyland & Bocking, 2020). This reinforces the view that religious education is not only about faith knowledge but also about forming responsible and ethical pupils. Thus, this review examines how religious instruction shapes children's ability to manage emotions, interact positively with others, and make moral choices. It also explains how religious values become part of pupils' daily classroom conduct, promoting habits such as respect for authority, care for others, and responsibility. Understanding these dynamics is important for creating learning environments that support both pupils' academic success and their development into morally responsible individuals.

By understanding how religious education influences classroom behavior, educators can design learning plans that help pupils grow academically and morally. Teachers can nurture well-rounded pupils by integrating moral and ethical principles into instruction. Such understanding also informs teacher training and strengthens values-based education, enabling pupils to apply religious lessons to real-life situations and improving their social and personal development (Smith, 2023).

Religious Education

Religious education refers to religious cultivation or growth within a particular faith tradition, and also to education about religions that provides accurate information taught with sensitivity and understanding of religious language Priala, n.d. (2024). Eric & Mbiti, (2024)stated that religious education helps pupils understand life in a multi-faith community by building awareness and respect for others' beliefs. Eric & Mbiti, (2024) added that religious education carries the responsibility of passing on knowledge, values, and attitudes that society needs to prosper.

Education, in general, is a strategic factor for national development, and it should empower pupils with skills, values, and critical thinking. Schooling shapes pupils' minds, relationships, and emotions, preparing them to contribute positively to their communities. Rochmat et al., (2024)emphasized that education encourages community involvement and prepares pupils to become responsible and helpful members of society. Within religious education, pupils learn beliefs and practices in ways that relate to their present lives.

Hannam et al., (2020) argued that religious education should go beyond teaching rituals and doctrines by encouraging reflection, personal connection, and application to daily experiences. Jalal, (2022) likewise noted that learning core religious values helps pupils understand right and wrong, develop empathy, and grow in responsibility values that influence how they behave toward others in the classroom.

Teaching methods are also important in religious education. Milerski, (2023) explained that effective teaching strategies help pupils grasp, apply, and internalize

religious knowledge. Common strategies include lectures, discussions, case studies, simulations, and applying religious values to everyday life (Orchard et al., 2024). However, ineffective methods may limit pupils' understanding and ability to apply religious concepts, negatively affecting both learning and moral practice (Khairani & Aloysius, 2023).

Mathes (2019) offered an evolutionary perspective on Kohlberg's moral development theory, suggesting that understanding moral growth stages helps structure religious education to support moral reasoning. As children mature, they understand abstract religious ideas better, and religious education supports this growth. Still, without emotional and practical support from families, religious concepts may remain theoretical.

For religious culture to grow, schools must agree on shared values, assign teachers to model these values, and collaborate with parents and communities. A spiritually rich school environment helps pupils apply faith beliefs in both school and daily life. Pupils Baha' (Students Baha' Shawaqfeh & Almahaireh, n.d.) noted that positive psychology in learning promotes motivation, confidence, and creativity, while also strengthening teacher-pupil relationships and supporting mental well-being.

Faith-based education in other traditions shows similar outcomes. Bahri (2025) reported that Islamic religious education shapes pupils' morals and prevents moral decline by teaching honesty, respect, and responsibility. (Ramang, 2022)added that schools reinforce religious education through co-curricular activities such as prayer groups, retreats, and community service, helping pupils practice values and grow spiritually and morally.

Teacher competence affects the success of religious education. (Law-Davis, 2023)found that teachers' confidence in Catholic primary RE improves when they have strong religious backgrounds and structured training, including Scripture pedagogy. Abramowitz and Hellberg (2020) likewise argued that pupils grounded in Christian morals show greater self-control, perseverance, integrity, humility, and accountability. Such values help pupils stay focused in school, cooperate with others, and manage peer pressure. This spiritual-moral foundation supports academic and personal well-being (Rifa Hidayah, 2021).In addition, Anugrah et al., (2025) showed that PBL deepens pupils' understanding of religious teachings and encourages practical moral reflection.

Faith, Understanding, and Doctrine

According to the CCC, faith is both a gift from God and a human response rooted in understanding and trust (CCC 158). Faith seeks understanding, meaning that believers should know, reflect on, and deepen revealed truths. In elementary religious education, this connection supports pupils in integrating doctrine into daily life.

Early exposure to religious values greatly influences pupils' character formation. Masdul (2024) emphasized that introducing faith-based teachings at a young age shapes positive attitudes and behaviors that last over time. Through guidance from teachers and structured religious lessons, pupils begin to develop a sense of right and wrong that helps regulate their actions in daily school life. The consistent guidance provided by teachers allows pupils to internalize moral lessons instead of simply memorizing religious concepts.

Connecting doctrine to real-life experiences strengthens pupils' understanding of their faith.Zafar Iqbal and Irsa Zahoor, (2024) found that linking religious teachings to

everyday situations helps pupils develop stronger moral awareness and practical wisdom. When pupils see the relevance of faith in their own lives, they become more likely to show honesty, kindness, and compassion in their behavior. This connection allows religious instruction to move beyond theory and become a guide for daily decision-making.

According to Manea, (2019) noted that continuous religious instruction enables pupils to connect belief with action, making moral behavior a natural part of their daily routine. Through repeated exposure to religious principles, pupils learn to practice patience, understanding, and empathy toward others. This consistent formation strengthens self-discipline and helps pupils manage their behavior in academic and social settings. Marks & Dollahite, (2025)further concluded that religious participation supports moral, social-emotional, and academic development, reinforcing prosocial classroom behavior.

Participation in Worship and Sacraments

The CCC teaches that participation in worship and the sacraments is central to Christian life because it unites believers with Christ and strengthens them through grace (CCC 1066–1075). Sacraments such as Baptism, Eucharist, and Reconciliation nourish spiritual growth, build community, and shape moral behavior. For pupils in Catholic schools, liturgical participation fosters responsibility, reverence, and belonging.

Religious education also strengthens pupils' responsibility and participation within school life.Arif & Elya, (2021) found that value-based religious character education increased pupils' school and community participation and improved responsible behavior in group tasks.Rachmadtullah et al., (2024) observed similar growth in accountability and

engagement when religious character education was implemented systematically. Hidayat (2024) explained that consistent religious character education strengthens pupils' sense of responsibility and involvement in moral activities. Jusubaidi et al. (2025) added that transformative religious education links moral lessons to real-life experiences, teaching pupils that responsibility means acting with honesty, compassion, respect, cooperation, and empathy.

Rodríguez-Fernández,(2025) showed that spiritual pedagogy in religious education encourages deep conversation, reflection, and ethical decision-making among pupils. Kurniawan et al., (2022) also noted that RE routines help pupils express spiritual understanding and apply religious values daily. Catholic curriculum integrates faith and reason through sensory worship and sacramental life (Franchi & Davis,2024), forming whole-person development. Monte Cassino, n.d. (2025) described sacraments as visible signs of God's love that reinforce discipline, respect, and empathy. In elementary RE, sacraments are taught as foundational experiences that strengthen Catholic identity (Archdiocese of New York, 2021) and encourage participation in prayer, service, and moral living(Franchi & Davis, 2021).

Participation in religious activities strengthens discipline and responsibility through lived experiences. Paul et al., (2025) explained that group prayer, reading of sacred texts, and involvement in religious social activities offer pupils practical opportunities to apply moral teachings. These experiences help transform theoretical learning into real-life behavior by developing habits of empathy, self-control, and service.

Continuous involvement builds a supportive environment where good behavior is encouraged through shared responsibility and community values.

Christian Morals and Respect for Others

The CCC teaches that every human person has dignity because they are created in God's image; therefore, moral formation requires respect, justice, and compassion. Pupils must learn to distinguish good and evil acts and choose what is right.

Religious education promotes respect for others among elementary pupils. Sari and Nugroho (2022) found that pupils exposed to value-based religious education showed stronger respect toward classmates, teachers, and school staff, including peaceful conflict resolution and helpfulness. Lestari et al. (2021) reported that religious moral education improved pupils' ethical awareness, leading to kinder peer relationships and cooperative classroom behaviorKleindienst & Kleindienst, (2024) supported this, emphasizing that religious and moral education fosters awareness of human dignity, empathy, and ethical conduct.

Religious education extends beyond classroom learning by helping pupils apply values daily. Priala, (2024) highlighted that education fosters tolerance and moral awareness in changing societies. Arif & Elya, (2021)found that schools integrating faith-based practices (prayers, projects, moral reflection) strengthened discipline and collaboration. Liu (2024) similarly reported that structured religious teachings increased pupils' good acts such as honesty, rule-following, and helping classmates.AfifaKhanam et al., (2021) found that pupils who regularly participated in religious learning developed greater empathy and accountability. Increased sensitivity to others' feelings improved

decision-making and social behavior. Moral awareness supported peaceful interaction and fairness in daily school life. Positive behavior was strengthened through the consistent practice of religious values.

Niskaromah, Abdullah A. C., and Amalia P. (2025) observed improved honesty, helpfulness, and discipline among pupils who participated in structured religious lessons. Understanding the importance of good acts made pupils more capable of resisting negative influences. Responsible behavior increased as learners practiced moral principles in real-life situations. Respect for others became more visible in classroom and community interactions. Debbarma (2024) likewise showed that pupils exposed to moral teachings were less likely to engage in lying, cheating, and bullying. Strong moral guidance supported better self-regulation and behavioral control. Awareness of the consequences of harmful actions strengthened ethical decision-making. Trust, harmony, and respectful relationships were reinforced through continuous moral education. Ogula, (2024) emphasized that valuing approaches moral debates, reflection, and real-life application help pupils internalize virtue and behave ethically.

Behavior

Classroom noise and behavioral problems affect learning and the classroom atmosphere. Behaviors such as talking out of turn, bullying, ignoring directions, and disrespect disrupt both teachers and pupils (Franklinet al., 2024). These behaviors lower

engagement, increase absenteeism, and strain teacher-pupil relationships.EdD Dissertations & Bell, (2024) emphasized early intervention for elementary misbehavior to prevent serious problems in later grades. Schools must nurture moral behavior through values and character educationHakim et al., (2020) especially as global moral challenges continue (Mastroianni & Gilbert, 2023).

Research also links religion and behavior to academic outcomes. Horwitz, (2021)found that pupils with stronger religious commitment tended to show higher levels of school engagement and more positive learning attitudes. Better classroom participation and respect for school rules were observed among these pupils. Strong value systems were linked to improved behavioral choices. Increased motivation and focus contributed to more stable classroom conduct. However, Abimbade et al. (2019) reported mixed findings, showing religion did not significantly predict attitudes toward misconduct among some Nigerian pupils. These varied results support the need for the present study in the Philippine elementary context.

Dimacangun & Sambo, (2024)reiterated that classroom behavior affects performance, with activity-related behavior being the strongest predictor. O. Ramacula & C. Pañares (2023)added that behaviorism explains how classroom environments shape pupil conduct, meaning teachers can directly improve behavior through guided reinforcement. Temel et al., (2024) found that participation in traditional children's games improved pupils' sense of belonging and positive social behavior, contributing to better school awareness and sportsmanship. Similarly, Marks & Dollahite, (2025) observed that disruptive behavior frequently stems from lack of rule-following and poor

listening skills, stressing the importance of strong teacher-pupil relationships, clear classroom routines, and structured expectations. Panaligan (2019) found that character education helps pupils understand the importance of respecting others, and that pupils often imitate teachers who model respectful and ethical behavior. Institutional policies, school climate, extracurricular activities, and clear behavioral standards contribute significantly to shaping pupils' conduct in school environments.

Castino (2023) revealed that child protection policies, especially anti-bullying campaigns, were effective when schools distinguished between playful behavior and harmful actions while reinforcing positive conduct through praise and rewards. B. Jayme & C. Tantiado, (2025) reported that strong classroom management practices such as clear rules, consistent procedures, and structured instruction were directly linked to improved learner behavior. Institutional support for teachers was shown to be crucial in sustaining effective classroom control and promoting positive behavior patterns.

Dulay (2020) highlighted that positive peer interactions strengthen cooperation and create supportive learning environments, whereas negative peer relationships often lead to disruptive behavior and reduced academic performance. Religious education has been found to positively shape peer interactions by promoting empathy, respect, and acceptance.Adili et al. (2023) reported that 58.5% of teachers observed improved attitudes among pupils toward peers of different religions, races, and backgrounds. Religious teachings emphasizing forgiveness, humility, kindness, and cooperation were found to reduce interpersonal conflict and improve classroom harmony. Nur Hayati (2020) further revealed that school cultures that integrate spiritual routines such as

prayer and value-based activities strengthen pupils' patience, empathy, and respect for peers, transforming moral awareness into habitual prosocial behavior.

Learners' Classroom Behavior Toward Classmates/Schoolmates

Dulay, (2020) says that how elementary school pupils interact with their classmates significantly affects how they behave in class, including how well they do in school and with other kids. Positive relationships with peers are often linked to greater teamwork, while negative interactions can lead to disruptive behavior and make it harder to do well in school.

Adili et al., (2023) reported that many teachers observed RE improving pupils' attitudes toward peers of various faiths and backgrounds by strengthening empathy, tolerance, and respect. diverse classroom contexts.

Nur Hayati (2020)examined the integration of religious character education within school culture and its impact on pupils' moral behavior and social relationships. The study revealed that when spiritual principles are consistently practiced through daily routines such as morning reflections, prayer, and value-based cooperative activities, pupils gradually develop empathy, patience, and respect toward peers. These behaviors contribute to a cooperative classroom environment where learners support one another and resolve conflicts peacefully. The findings emphasized that faith-based school culture does not merely teach moral values but actively shapes pupils' interaction patterns, transforming moral awareness into habitual prosocial behavior that strengthens classroom harmony and peer relationships.

Elementary learning environments consist of young learners who are still adjusting to structured settings that differ significantly from their home environments. According to Aseery, (2024)learners often encounter challenges related to following schedules, adapting to classroom routines, and interacting with unfamiliar peers and teachers. These adjustment processes directly influence classroom behavior toward classmates and schoolmates, particularly in the development of cooperation, communication, and social participation. Successful adjustment is associated with respectful, friendly, and cooperative behavior, while difficulties in adaptation may manifest as withdrawal, conflicts, or disruptive actions. Understanding these behavioral patterns is essential in evaluating pupils' social development and their overall adjustment to formal school settings.

According to B. Jayme & C. Tantiado, (2025), most pupils prefer maintaining classroom peace by avoiding unnecessary conflicts and practicing polite and cooperative behavior toward their peers. These behaviors contribute to a safe, supportive, and inclusive learning environment where pupils feel encouraged to participate and express themselves. Teachers play a critical role in fostering these behaviors by integrating conflict resolution skills and social-emotional learning (SEL) into daily classroom instruction. Through SEL, pupils develop empathy, self-regulation, and effective communication skills, which enable them to manage emotions and resolve disagreements in constructive ways. The consistent teaching of these competencies strengthens peer cooperation, mutual respect, and shared understanding within the classroom community.

Jayme a Iqbal, Zafar and Zahoor, Irsa (2024) stated that classroom behavior problems such as excessive talking, rudeness toward classmates, disruptive actions, and violent behavior significantly interfere with teaching and learning processes. These behaviors disrupt instructional flow, distract other learners, and reduce overall classroom engagement. They also contribute to feelings of fear, tension, and discomfort among pupils, creating hostile learning environments where respect and cooperation decline. Over time, persistent behavioral problems negatively affect academic performance as well as pupils' social and emotional development. The study emphasized the importance of maintaining consistent classroom discipline and implementing effective behavior management strategies, including clear rules and social-emotional learning, to ensure a safe and productive learning environment.

According to Madalo et al., (2025)teachers experience considerable challenges due to poor classroom management and persistent pupil misbehavior during learning sessions. These challenges hinder effective instruction, disrupt classroom organization, and slow pupils' academic progress. In response, teachers have adopted visually stimulating learning materials, interactive teaching strategies, and learner-centered approaches to restore classroom order and enhance engagement. Similarly, Alakashee et al. (2022) emphasized the importance of addressing behavioral problems at the elementary level. The study explained that unaddressed behavior issues significantly hinder pupils' ability to acquire essential academic and life skills needed for long-term success. Persistent behavioral problems were linked to reduced classroom participation, missed learning opportunities, and declining interest in learning. As a result, pupils

struggled to develop critical academic competencies such as problem-solving, critical thinking, and effective communication. Alakashee et al. (2022) further stressed that early intervention is crucial because it supports the development of both academic and social-emotional skills required for successful schooling and future professional life.

Learners' Classroom Behavior Toward School Activities

Dulay, Lolita (2020) says that how a pupil feels about school activities strongly affects how much they participate in learning, which, in turn, affects how well they do in school. Active participation in projects and classroom work improves learning, but a lack of interest or disruptive behavior may result in lower grades.

Estrada et al. (2019) found that pupils receiving religious education show stronger self-discipline and healthier responses to challenges, becoming more motivated and consistent in schoolwork. Religious values such as duty, honesty, and service encourage pupils to view school tasks as meaningful. Hafid and Guru Sekolah Dasar (2019) reported that consistent reinforcement of discipline, cooperation, and responsibility results in increased learner participation and sustained effort. Pupils exposed to character-focused teaching tend to exert more effort during school activities and demonstrate stronger collaboration skills. These behaviors reflect a shift from compliance-driven participation to internally motivated engagement, which strengthens both academic and social learning outcomes.

Learners' conduct during school activities directly affects the classroom atmosphere and the effectiveness of instruction. Ramacula and Pañares (2023) noted that

learners who display attentiveness, respect, and cooperation allow teachers to manage time more efficiently and implement interactive strategies with fewer disruptions. Similarly, Herman et al. (2018) emphasized that appropriate classroom behavior reduces interruptions and enhances emotional regulation among learners. This interaction between behavior and instruction highlights how positive conduct functions as a structural support for meaningful learning experiences.

Participation in school-wide and co-curricular activities reinforces behavioral patterns associated with teamwork, discipline, and social responsibility. Temel et al. (2024) observed that learners involved in traditional games and school engagement programs develop higher levels of sportsmanship, rule adherence, and collaborative skills. These experiences strengthen learners' emotional attachment to the school environment, which in turn encourages consistent positive behavior during both classroom and extracurricular activities.

Sustained positive behavior toward school activities is associated with long-term academic and personal development. Dimacangun and Sambo (2024) emphasized that learners who consistently engage in structured activities and demonstrate self-regulation are more likely to develop persistence and independent learning habits. The presence of supportive classroom management practices and values-oriented instruction strengthens these outcomes by guiding learners toward responsible participation and adaptive learning behaviors.

Learners' Classroom Behavior Toward Teachers and Persons in Authority

Based on Dulay, Lolita (2020) Research has shown that the relationships between elementary school pupils and their teachers and other adults in charge have a big impact on how well they do in school. Pupils who get along well with their teachers are more likely to follow the rules and participate, while bad behavior can ruin the learning environment and hurt academic performance.

Religious education significantly influences how elementary learners perceive and interact with teachers and other figures of authority by cultivating attitudes of respect, obedience, and positive interpersonal relationships within the school setting. Vega Sya'bana et al. (2024) identified acts of disrespect, including disobedience and rude behavior, as among the most serious forms of pupil misconduct, underscoring the importance of fostering mutual respect between learners and educators. Learners' behavior toward teachers and administrators is further shaped by their exposure to biblical teachings that emphasize obedience, recognition of leadership, and adherence to authority. The Fordham Institute reported that pupils in Catholic schools exhibit stronger self-control, greater respect for property, improved openness to others' viewpoints, and enhanced ability to resist negative peer pressure, indicating that faith-based education contributes to higher levels of discipline and respect for authority structures.

Sarkadi (2022) examined how integrating character education into religious learning processes strengthens pupils' respect, compliance, and moral responsibility toward authority figures. The findings revealed that when educators intentionally incorporate value-based instruction focusing on honesty, humility, and self-discipline, pupils demonstrate increased reverence and willingness to follow classroom rules.

Continuous moral formation was also shown to improve pupils' internal self-regulation, reduce tendencies toward defiance, and promote positive perceptions of authority. Through sustained exposure to value-oriented instruction, moral principles move beyond theoretical understanding and become evident in pupils' actual classroom behavior and discipline, demonstrating the transformative effect of faith-based pedagogy on respectful conduct.

Religious education further teaches learners that respect for authority is rooted in spiritual accountability, reinforcing the belief that obedience to legitimate authority reflects obedience to divine order. This perspective reduces tendencies toward argumentation, defiance, and disruptive behavior among pupils. Emphasizing Christian virtues such as humility, obedience, and submission to rightful authority strengthens teacher pupil relationships and contributes to a more orderly, focused, and productive classroom environment. As learners internalize these faith-based values, they develop stronger self-discipline and greater respect for institutional structures, creating a foundation for responsible behavior within formal learning environments.

Temel et al. (2024) argued that religious values serve as a central foundation for moral and character development by guiding individuals' thoughts, actions, and social interactions. Acting as an internal moral compass, these values support ethical decision-making grounded in spiritual duty and social responsibility. When religious education is integrated into formal schooling, it extends beyond mere instruction and becomes a transformative process that shapes pupils' attitudes and dispositions. Through consistent engagement in prayer, reflection, and the study of sacred texts, learners acquire virtues

such as honesty, compassion, humility, and respect, which gradually become embedded in their daily behavior. These virtues not only promote harmonious relationships within school communities but also strengthen pupils' spiritual growth and alignment with both divine guidance and societal expectations.

Theoretical Framework

This study is guided by Bandura's Social Learning Theory (1986) and Kohlberg and Power's Theory of Moral Development (1981). Bandura (1986) explains that pupils learn behaviors and values through observation, imitation, and interaction. This theory is relevant to Christian religious education because pupils acquire moral behavior by watching teachers, peers, and religious figures. It highlights the school's role in shaping classroom behavior through modeling and reinforcement.

Bandura's theory includes four related processes: observational learning, modeling, cognitive processes, and self-regulation. Observational learning occurs when pupils watch moral and faith-based behavior in school. Modeling happens when teachers demonstrate classroom conduct aligned with Christian values. Cognitive processes involve pupils interpreting and internalizing what they observe. Self-regulation refers to pupils controlling their actions based on learned Christian principles. Together, these processes explain how religious education can influence classroom behavior by shaping what pupils believe and how they act.

Kohlberg and Power's (1981) Moral Development Theory complements Bandura by explaining stages of moral reasoning, from avoiding punishment to making principled ethical choices. Religious education supports pupils in moving through these stages by

providing moral discussions, Bible stories, prayer, and sacramental participation. These experiences allow pupils to reflect on right and wrong and practice faith-based moral decisions. As pupils mature morally through these stages, they become more responsible, kind, forgiving, and respectful in classroom life.

In summary, Bandura (1986) explains how pupils learn behavior through modeling and self-regulation, while Kohlberg and Power (1981) explain how pupils develop moral reasoning through stages. Both theories support the study's focus on how religious education influences elementary pupils' classroom behavior, particularly through faith understanding, responsible participation, and respect for others.

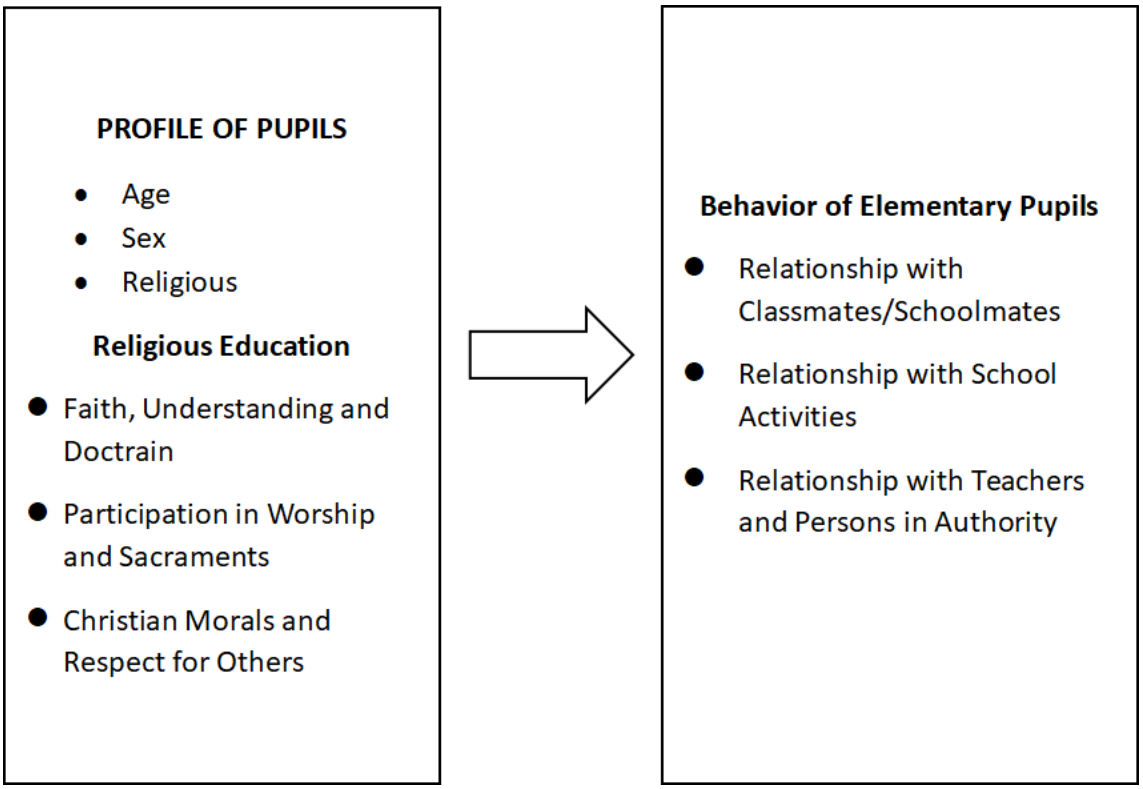

Figure 1. Schematic Diagram

Statement of the Problem

This study aims to determine the influence of religious education on the behavior of elementary pupils at Saint Michael College of Caraga, Triangulo Campus, during the School Year 2025–2026. Specifically, it will answer the following questions:

1.What is the profile of pupils in terms of:

1.1 age;

1.2 Sex, and

1.3 Religion?

2. What is the level of religious education as subject in the Elementary Catholic School of:

2.1 Faith, understanding and doctrine;

2.2Participation in Worship and Sacraments;

2.3 Christian morals and respect for others; and

3. What behaviors will be manifested by the elementary pupils in terms of:

3.1 Relationship with the classmates/schoolmates;

3.2 Relationship with school activities; and

3.3 Relationship with teachers and persons in authority?

4. Is there a significant relationship between pupils' Religious Education and their classroom behavior?

5. Is there a significant difference in pupils' Religious Education level and behavior when grouped according to age, sex, and religion?

Hypothesis of the Study

As the study investigates the relationship between religious education practices and pupils' behavior, the following hypotheses are proposed:

Null Hypothesis

H_{o1}: There is no significant relationship between pupils' Religious Education and their classroom behavior.

H_{o2}: There is no significant difference in the behavior of pupils when grouped according to their profile such as age, sex, and religion.

Scope and Limitation

This study will examine how religious education influences the behavior of elementary pupils at Saint Michael College of Caraga, Triangulo Campus, during the School Year 2025–2026. Specifically, it will focus on how the three key factors of religious education, Faith, Understanding and Doctrine, Participation in Worship and Sacraments, Christian Morals and Respect for Others, affect pupils' classroom behavior. The research will investigate how these aspects of religious formation shape pupils' relationships with their classmates and schoolmates, participation in school activities, and interactions with teachers and persons in authority.

The scope of the study will be limited to pupils from Grades 3 to 6, as these grade levels are considered crucial for moral and behavioral development. The research will focus solely on the experiences of pupils at the Saint Michael College of Caraga, Triangulo Campus. Factors beyond the school setting, such as family background, peer influence outside of school, and socioeconomic status, will not be included in the analysis.

Additionally, the study will not cover the long-term effects of religious education beyond the elementary level or compare findings with other schools.

Definition of Terms

To ensure clarity in this study, it is important to define key terms and concepts. This section provides clear definitions of the terms used throughout the research. This is to facilitate understanding of the terminology and context of the study on The Influence of Religious Education on the Behavior of Elementary Pupils:

Age refers to the number of years a pupil has lived since birth, based on school records. It is used to categorize respondents by developmental stage and to analyze variations in behavior and religious participation.

Behavior refers to the observable actions, attitudes, and responses of pupils within the classroom and school environment. In this study, behavior is operationalized through three measurable dimensions: behavior toward classmates or schoolmates, behavior toward school activities, and behavior toward teachers and persons in authority. It is quantified using survey responses that describe the frequency of positive or negative behaviors exhibited by the pupils.

Behavior Towards Classmates or Schoolmates refers to how pupils interact with their peers during class or school activities. It is observed through cooperative, respectful, and friendly interactions and is measured using a behavior checklist and survey responses regarding peer relationships and social conduct.

Faith, Understanding and Doctrine refers to the pupils' level of religious comprehension and belief as measured through their questionnaire scores on items

assessing how often they understand, recall, and express the teachings from their Religious Education lessons. Higher mean scores indicate stronger levels of faith understanding and doctrinal awareness.

Christian Morals and Respect for Others This refers to pupils' practice of moral behaviors aligned with Christian values as measured through their responses on items evaluating how often they demonstrate honesty, respect, obedience, kindness, cooperation, and avoidance of harmful acts. Higher scores indicate stronger moral and respectful behavior.

Religion refers to the faith or belief affiliation of each pupil (e.g., Catholic, Protestant, etc.), as indicated in school records or survey responses. It is used to classify pupils and analyze possible relationships between religious background and behavioral patterns.

Religious Education refers to the structured learning experiences provided by the school that aim to develop pupils' knowledge of faith, moral values, and Christian virtues. In this study, it is operationalized through the pupils' level of engagement in five measurable components: attending Mass, communication, instruction, participation in religious activities, and reception of the sacraments.

Participation in Worship and Sacraments This refers to the extent of pupils' involvement in religious practices as measured by their frequency ratings on participation in Mass, prayer activities, school religious events, and reception of sacraments. Higher scores represent greater participation in worship and sacrament.

Sex refers to the biological distinction between male and female pupils, as recorded in the school's enrollment data. It is used as a demographic variable to identify potential differences in religious engagement and classroom behavior.

CHAPTER 2

RESEARCH METHODOLODY

This chapter presents the research design, research locale, research respondents, research instruments, ethical standards, data-gathering procedure, and data analysis plan and procedure.

Research Design

Researchers will use a descriptive-correlational research design for this research. The descriptive component will describe the level of Religious Education that elementary pupils will receive and how they will behave in school. The correlational component will examine whether there will be a significant relationship between Religious Education and pupils' behavior.

The study will aim to describe the current situation and determine whether there will be a relationship between pupils' behavior and the religious education they will learn in school. Through this approach, the researchers will be able to gather reliable data to answer the research questions and provide teachers, parents, and school administrators with useful information.

Research Environment, Population and Sample

The study will take place at Saint Michael College of Caraga, Triangulo is a Catholic educational institution located at Atupan Street, Barangay 4, Nasipit, Agusan del Norte, with approximate geographical coordinates of 8.9698° N latitude and 125.3389° E longitude. Established in 1948, the institution has consistently provided quality education anchored in Christian values, academic excellence, and social responsibility. The main

campus serves as the administrative and academic hub, catering to various levels of education from basic to higher learning.

To accommodate the increasing number of learners, SMCC expanded its facilities through the establishment of the Triangulo Campus, which houses the Basic Education Department, particularly the Elementary Level. The campus provides a structured and nurturing environment designed to support pupils' holistic development spiritually, intellectually, and socially.

This educational setting is characterized by a supportive school community, competent educators, and adequate learning resources. Such an environment allows the effective implementation of diverse teaching approaches and strategies that foster active engagement and improved learning outcomes among elementary pupils.

Research Respondents

The study will involve pupils enrolled in Grades 3-6 at Saint Michael College of Caraga, Triangulo Campus, during the 2025–2026 school year. Purposive sampling will be employed to ensure equal representation across grade levels. Grades 3 to 6 will be selected because pupils at this developmental stage will be particularly influenced by religious education in their behavior within and outside the classroom.

Table 1. The Distribution of Respondents of the Study

	Male		Female		Total	
Grades	F	%	F	%	F	%
Grade 3	2	7.14	3	10.34	5	8.77%
Grade 4	10	35.71	3	10.34	13	22.81%
Grade 5	9	32.19	13	44.82	22	36.60%
Grade 6	7	25	10	34.48	17	29.82%
Total	28		29		57	100%

Research Instruments

Content validation will be conducted to ensure the instrument's validity. Experts in education and research will review the questionnaire to assess whether the items will accurately measure the intended variables, and their feedback will be used to refine the instrument. A pilot test will then be administered to a small group of pupils who will not be included in the main sample.

The questionnaire for the Religious Education variable is a researcher-made instrument developed by the researcher based on related literature. It focuses on four key factors: Faith, Understanding and Doctrine, Participation in Worship and Sacraments, Christian Morals and Respect for Others, affect pupils' classroom behavior. These factors are anchored in the Catechism of the Catholic Church (CCC) to ensure that the instrument

aligns with Catholic teachings on faith, morals, and values. This part of the instrument will undergo content validation by experts in education and theology to ensure each item accurately measures the intended concept. A pilot test will also be conducted to determine its reliability using Cronbach's alpha

For the Behavior variable, the study will use a standardized instrument adapted from Dulay (2020) in her study "Classroom Behavior and Academic Performance of Public Elementary School Pupils." This tool measures pupils' behavior in three domains: (1) relationship with classmates or schoolmates, (2) relationship with school activities, and (3) relationship with teachers and persons in authority. Permission to adapt this instrument will be obtained, and its reliability will be re-assessed before the main data collection.

2.4 Data Gathering Procedure

The researchers will follow a systematic procedure to ensure that data collection is accurate, reliable, and ethically conducted. The researchers will request permission from the School Principal of Saint Michael College of Caraga, Triangulo Campus, to conduct the study. Upon approval, the researchers will request the assistance of the classroom advisers in distributing and retrieving the questionnaires among all 57 pupil respondents from Grades 3 to 6.

Before administering the questionnaires, the researchers will clearly explain the purpose and procedures of the study to the respondents. It will be emphasized that participation is voluntary and that all responses will be treated with strict confidentiality.

Parents or guardians will also be requested to sign a consent form to allow their children to participate in the study, ensuring compliance with ethical standards involving minors.

The primary research instrument will be a structured questionnaire composed of two validated tools: a self made questionnaire of Religious Education Practices Instrument and a standardized Behavior Instrument (adapted from Dulay, 2020). The questionnaires will be administered during regular class hours with the assistance of classroom advisers, who will ensure that the pupils clearly understand each item.

Data Analysis Plan and Procedure

The collected data will be organized, analyzed, and interpreted using appropriate statistical methods suited for a quantitative descriptive–correlational design. Frequency and Percentage. To describe the profile of the respondents in terms of age, sex, and religion.

Mean. This will be used to determine the level of religious education practices and the behavioral manifestations of elementary pupils.

Pearson Correlation Coefficient (r). This will be used to determine whether there will be a significant relationship between religious education practices and the behavior of elementary pupils when grouped according to their profile variables.

Comparative Analysis. This will be used to determine whether pupils with higher engagement in religious education will demonstrate better classroom behavior across all behavioral areas compared to those with lower engagement.

The results will be interpreted using a five-point Likert scale and analyzed both descriptively and inferentially to answer the research questions and achieve the study's objectives.

Research Ethical Standards

A. Intellectual Property Rights (IPR)

The study respects intellectual property rights by ensuring that all research outputs, including instruments and analytical frameworks used, will be protected under Philippine copyright law. All third-party sources and secondary data used in this research will be properly cited. Since no new logos, symbols, or brands will be created, there will be no need for trademark registration.

B. Informed Consent

The research team will clearly explain the study's purpose, procedures, risks, and benefits to all participants. Before data collection, the elementary school pupils who will participate will be informed that participation is voluntary and that their responses will remain confidential. The researcher will provide a permission letter to the parents or guardians, who will then give their written consent for the child's participation. This process ensures compliance with ethical standards for research involving minors and guarantees that respondents are fully informed of their rights and the study details before taking part.

C. Data Privacy and Confidentiality

A structured questionnaire will be used to collect personal and sensitive data for this study. Researchers will keep all responses confidential. To protect privacy,

participants' data will be anonymized by assigning unique identifiers instead of names or other identifying information. All files will be stored digitally and protected by passwords, accessible only to authorized members of the research team. Anonymized data may be shared with third parties, such as school administrators or research colleagues, only for academic purposes and with prior consent from participants or their guardians. This process will ensure compliance with data privacy laws and ethical standards.

D. Voluntary Participation

Respondents in the study will be informed that they can withdraw at any time without facing any negative consequences. During the informed consent process, this right will be clearly explained to both participants and their guardians, ensuring voluntary participation without coercion or academic repercussions.

E. Minimization of Harm

Respondents in this study are expected to experience minimal risk. To minimize any potential physical, psychological, or emotional harm, all questionnaire items will be carefully designed to avoid sensitive or distressing topics. Participants were informed of their right to discontinue participation if they felt uncomfortable at any point during the data collection process. Appropriate support or referral to counseling services will be provided if needed. These measures ensure that all participants are treated ethically and that their well-being remains the top priority throughout the research process.

F. Beneficence

This study will contribute to academic knowledge by showing how religious education influences the behavior of elementary pupils, which may improve teaching

methods and lesson design. It aims to help teachers and pupils develop better approaches to encourage positive behavior through faith-based instruction. The results will also promote moral and ethical growth among young learners, fostering responsible and compassionate individuals. Research findings will be made available to participants and their guardians upon request to ensure transparency.

G. Justice and Fair Participant Selection

Respondents will be selected through purposive sampling, focusing on Grades 3 to 6 pupils at Saint Michael College of Caraga, Triangulo Campus, who are at a key stage of moral and behavioral development. This method will ensure fairness by selecting participants based on clear academic and developmental criteria relevant to the study's objectives. All qualified pupils within this grade range will have an equal opportunity to participate, ensuring just and unbiased representation.

H. Data Integrity and Accuracy

Researchers will ensure data integrity and accuracy by following standardized procedures in data collection and analysis. A validated structured questionnaire with a five-point Likert scale will be used to measure religious education practices and pupil behavior. Data will be carefully encoded, checked for consistency, and analyzed using appropriate statistical tools to maintain reliability and accuracy. All findings will be recorded truthfully and interpreted objectively to uphold the study's credibility.

I. Transparency in Reporting

The research results will be reported honestly and transparently. Findings will be presented accurately and will not be manipulated or selectively reported. All references,

copyrighted materials, and other relevant sources will be properly cited and acknowledged in accordance with citation standards. Any patented materials used will be clearly identified and credited to their rightful owners, ensuring the protection of intellectual property rights.

J. Use of Patented or Copyrighted Materials

The researchers will utilize a researcher-made questionnaire and conduct a pilot test to ensure its validity and reliability. The second instrument, which will be used for the other variable, will be adapted from a reputable online source. Proper acknowledgment will be given to the original author and source. All materials will be used ethically and in full compliance with copyright laws to ensure respect for intellectual property rights.

K. Ethical Considerations for Animal and Human Trials

The researchers will provide an informed consent form detailing the potential risks and benefits of participating in the study. Respondents will be given ample time to ask questions and seek clarification before agreeing to take part, ensuring informed and voluntary participation.

L. Responsible Use of AI and Related Technologies

Researchers will gather, process, and analyze information accurately and ethically. Standardized methods will be used to record and interpret performance and feedback data.

M. Ethical Approval

Ethical approval for the study will be obtained from the Institutional Review Board of Saint Michael College of Caraga, ensuring full compliance with ethical guidelines on participant protection, data privacy, and intellectual property rights.

Respondent Profile Survey

(Optional) Name: _____

Address: _____

Part I: Pupil's Profile

Panudlo: Palihug itsek ang angay nga item nga nagtugma sa imong tubag:

(**Direction:** Please check the appropriate item that corresponds to your answer:)

Edad (Age)

( ) 9 ka tuig (9 years old)

( ) 10 ka tuig (10 years old)

( ) 11 ka tuig (11 years old)

( ) 12 ka tuig (12 years old)

1. Seks (Sex)

( ) Lalaki (Male) ( ) Babaye (Female)

Religious Education Practices in School
Instructions: Rate the extent to which you feel these practices are present in your school. Put a check mark (√) on the appropriate column of your choice. Be guided by the indicators below:

Pagpanudlo: Irate kung unsa ka kanunay nimo nabati nga kaning mga binuhatan naa sa inyong eskwelahan.
Ibutang ang check mark (√) sa husto nga kolum nga imong pilion.

Scale	Description	Interpretation
4	Strongly Agree	It happens every single time without fail.
3	Agree	It happens frequently, but not all the time
2	Disagree	It happens occasionally
1	Strongly disagree	It does not happen at all

Scale Skala	Description Deskripsyon	Interpretation Kahubanan
4	Kusgan nga Uyon	Mahitabo kini pirme ug walay palya.
3	Uyon	Kanunay kini mahitabo, pero dili pirmi.
2	Dili Uyon	Usahay ra kini mahitabo.
1	Kusgan nga Dili Uyon	Dili kini mahitabo bisan gamay.

Religious Education	**Strongly Agree 4**	**Agree 3**	**Disagree 2**	**Strongly Disagree 1**
A. Faith, understanding, and Doctrine				
1. I learn that God loves me and created me with a purpose. (Nakat-on ko nga gihigugma ko sa Dios ug gimugna ko nga adunay katuyoan.)				
2. I know that God is Father, Son, and Holy Spirit. (Nakahibalo ko nga ang Dios mao ang Amahan, Anak, ug Espiritu Santo.)				

3. I enjoy learning Bible stories and lessons about Jesus. (Nalipay ko sa pagkat-on sa mga istorya sa Bibliya ug mga pagtulon-an bahin ni Jesus.)				
4. I understand that Jesus is truly God and truly man. (Nakasabot ko nga si Jesus tinuod nga Dios ug tinuod nga tawo.)				
5. I try to pray more because of what I learn in Religion. (Maningkamot ko nga mas kanunay mag-ampo tungod sa akong natun-an sa Religion.)				
6. I know that the Eucharist is Jesus truly present. (Nakahibalo ko nga ang Eukaristiya mao si Jesus nga tinuod nga anaa kanato.)				
7. I understand the meaning of the Sacraments. (Nakasabot ko sa kahulogan sa mga Sakramento.)				
8. I learn about Mary and the saints as examples of faith. (Nakat-on ko bahin ni Maria ug sa mga santos isip mga ehemplo sa pagtuo.)				
9. I believe that my faith helps me make good choices. (Nituo ko nga ang akong pagtuo makatabang nako sa paghimo og maayong desisyon.)				
10. I know that being Catholic means living with love, truth, and kindness.				

(Nakahibalo ko nga ang pagka-Katoliko nagpasabot sa pagpuyo uban sa gugma, kamatuoran, ug pagkamaayo.)				
B. Participation in Worship and Sacraments				
1. I join the class prayers with respect and attention. (Apil ko sa pag-ampo sa klase uban ang pagtahod ug pagtagad.)				
2. I feel closer to God when I am praying. (Mas duol ko sa Dios kung nag-ampo ko.)				
3. I commit to being present in Mass or Worship Day. (Maninguha ko nga motambong pirmi sa Misa o Worship Day.)				
4. I understand why we celebrate the Eucharist or Worship Day. (Nakasabot ko nganong ginaselebrar nato ang Eukaristiya o Worship Day.)				
5. I listen carefully during the reading of the Word of God. (Maminaw ko og tarong sa pagbasa sa Pulong sa Dios.)				
6. I participate respectfully in school prayer, liturgy, or spiritual activities. (Motambong ko og matinahuron sa pag-ampo, liturhiya, o espirituwal nga kalihokan sa eskwelahan.)				
7. I understand the importance of spiritual practices in my own faith tradition.				

(Nakasabot ko sa kaimportante sa espirituwal nga mga buhat sa akong kaugalingong pagtuo.)				
8. I am guided and prepared well before receiving the sacrament / (for non-Catholics, religious rites). (Giyahan ug giandam ko pag-ayo sa dili pa madawat ang sakramento o (alang sa dili Katoliko) relihiyosong ritwal.)				
9. I join school or parish activities that help me grow in my faith, such as prayer services, reflections, or opportunities for reconciliation appropriate to my religion. (Motambong ko sa mga kalihokan sa eskwelahan o parokya nga makatabang sa pagtubo sa akong pagtuo, sama sa prayer service, reflection, o mga higayon sa pagpakigdait sumala sa akong relihiyon.)				
10. I join school or parish activities that help me grow in my faith, such as prayer services, reflections, or opportunities for reconciliation appropriate to my religion. (Motambong ko sa mga kalihokan sa eskwelahan o parokya nga makatabang sa pagtubo sa akong pagtuo, sama sa prayer service, reflection, o mga higayon sa pagpakigdait sumala sa akong relihiyon.)				
C. Christian Morals and Respect for Others				

1. I know the difference between good and bad actions. (Nakahibalo ko sa kalainan sa maayo ug dautang binuhatan.)				
2. I try to be honest and tell the truth. (Maningkamot ko nga mahimong matinud-anon ug mosulti sa tinuod.)				
3. I say sorry when I hurt someone. (Mangayo ko og pasaylo kung nakapasakit ko sa uban.)				
4. I forgive others when they make mistakes. (Nagapasaylo ko sa uban kung sila masayop.)				
5. I treat everyone with kindness, even if they are different. (Ginatagad nako ang tanan uban sa pagkamaayo bisan lahi sila nako.)				
6. I avoid hurting others with words or actions. (Gilikayan nako ang pagpangdaot o pagpasakit sa uban pinaagi sa pulong o binuhatan.)				
7. I try to do what is right, even when no one sees me. (Maningkamot ko sa pagbuhat sa matarong bisan walay makakita.)				
8. I respect my teachers, parents, and classmates. (Ginarespeto ug ginatuman nako ang akong mga magtutudlo, ginikanan, ug kaklase.)				

9. I try to be fair when playing or sharing. (Maningkamot ko nga patas sa pagdula o pagpaambit.)				
10. I ask God to help me make good choices. (Nangayo ko og tabang sa Dios aron makahimo ko og maayong desisyon.)				

Learners' Classroom Behavior
(This is an adopted instrument from Dulay (2020) however, translations are provided by the researchers).
Instructions: Rate the extent to which you feel these practices are present in your school. Put a check mark (√) on the appropriate column of your choice. Be guided by the indicators below:

Scale	Description	Interpretation
4	Strongly Agree	It happens every single time without fail.
3	Agree	It happens frequently, but not all the time
2	Disagree	It happens occasionally
1	Strongly disagree	It does not happen at all

Behavior Towards Classmates or Schoolmates	**Strongly Agree 4**	**Agree 3**	**Disagree 2**	**Strongly Disagree 1**
1. I demonstrate respectful behavior. (Nagpakita ko ug maayong batasan.)				
2. I ask apology whenever necessary. (Mangayo ko'g pasaylo kung kinahanglan.)				
3. I challenged other's mental and physical weaknesses. (Dili ko magdaot sa kusog o hunahuna sa uban.)				

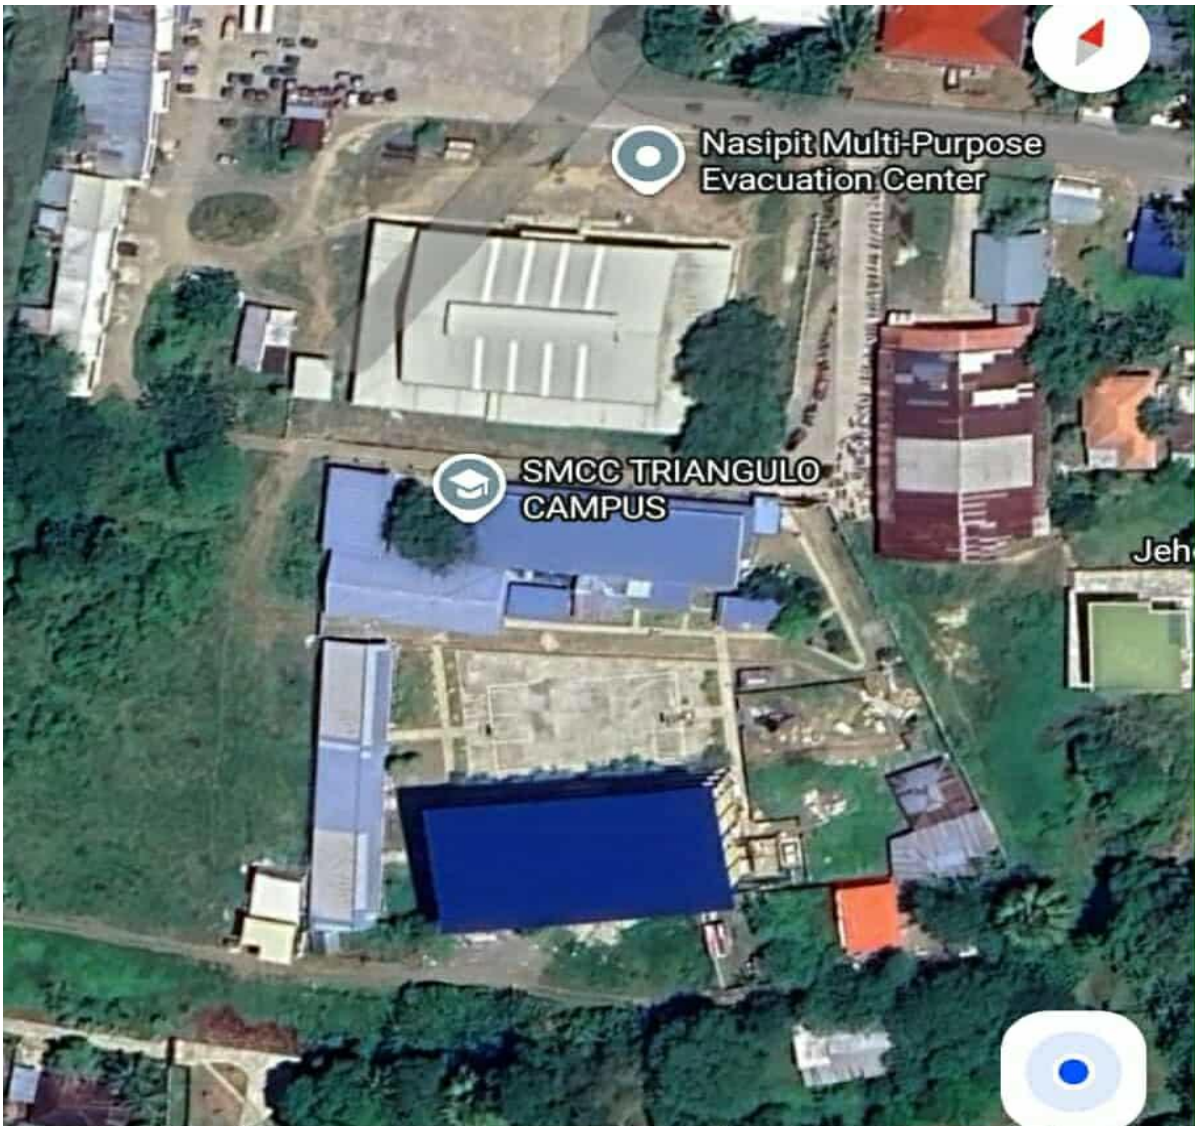

4. I tease classmates, schoolmates and laugh at anybody's wrong answers. (Manungog ko og magkatawa sa sayop sa uban.)				
5. I enjoy fooling / kidding classmates anybody else in the school which cause troubles. (Malipay ko pag magbinuang nga makasamok sa mga tawo sa eskwelahan.)				
6. I initiate verbal/ physical fights. (Ako ang magsugod ug away.)				
7. I possess a good relationship with peers. (Maayo akong pakig-uban sa akong mga amigo.)				
8. I interrupt or intrude on others. (e.g, butts in into conversation or games) (Manghilabot ko sa uban samtang nagstorya o nagdula sila.)				
9. I keep hand, feet, objects and unkind remarks to myself. (Ginapugngan nako akong kamot, tiil ug daotang istorya..)				
Learners' Classroom Behavior Towards School Activities	**Strongly Agree 4**	**Agree 3**	**Disagree 2**	**Strongly Disagree 1**
1. I bring complete materials to be used for class activities at all times. (Magdala ko pirmi ug kumpletong gamit sa klase.)				
2. I recite with my others classmates				

(Hindi ako sumasali sa mga pangkatang aktibidad.)				
3. I don't participate in group activities (Dili ko mag-apil sa grupo o kalihokan.)				
4. I copy from the work of others (Mangopya ko sa trabaho sa uban.)				
5. I just play around not doing the projects (Magdula ra ko imbis magtrabaho.)				
6. I do not stand up to recite. (Dili ko manindog kung pa-recite-on.)				
7. I look around for the answer (Mangita ko ug tubag sa uban.)				
8. I Get angry to my teacher for calling me to recite. (Masuko ko sa guro kung tawgon ko mag-recite.)				
Learners' Classroom Behavior Towards Teachers and Persons in Authority	**Strongly Agree 4**	**Agree 3**	**Disagree 2**	**Strongly Disagree 1**
1. I leave the class with teacher's permission. (Mangayo ko ug permiso kung mo-gawas sa klase.)				
2. I exhibit politeness to the teachers and person of authority. (Magpakita ko ug respeto sa mga guro ug opisyal sa eskwelahan.)				
3. I follow classroom rules and teachers expectations. (Mosunod ko sa mga balaod sa klase ug sa gusto sa guro.)				

4.	I listen quietly while teacher explains. (Maminaw ko sa guro kung magtudlo siya.)				
5.	I listen when spoken to directly. (Maminaw ko kung ako ang ginaistoryahan.				
6.	I commit habitual absences from the class. (Pirmi ko mag-absent.)				
7.	I talk excessively (Magsige kog tabi bisag nagtudlo ang guro.)				
8.	I actively defy or refuse to comply request or rules. (Dili ko mosunod sa sugo o balaod.)				
9.	I report to class/school late. (Ma-late ko sa klase o sa eskwelahan.)
