ABSTRACT

DEDICATION

DELETE BOX AFTER READING

Structure of a Dedication
1.**Opening Statement**
•Example: *"This thesis is dedicated to...*
2. **List and Explanation**
•Example: *"To my parents, for their love and support, and to my advisor, Dr. [Name], for invaluable guidance."*
3.**Closing (Optional)**
•Example: *"This work would not have been possible without you."*

ACKNOWLEDGEMENTS

DELETE BOX AFTER READING

Suggested Structure

Opening Statement
• Express general gratitude for the opportunity to complete the research or thesis.

Acknowledgment of Advisors and Professors
• Thank your thesis advisor, committee members, or professors for their guidance and expertise.

Acknowledgment of Family and Friends
•Thank those who provided emotional or financial support.

Acknowledgment of Institutional or Financial Support
•Recognize scholarships, grants, or organizations that funded or facilitated your research.

Special Thanks (Optional)
Mention individuals who provided significant help, such as peers, mentors, or technical staff.

Closing Statement
•Conclude with a general expression of gratitude.

Example

I am deeply grateful to everyone who contributed to the completion of this thesis. My sincerest thanks to my advisor, Dr. [Name], for your invaluable insights and guidance. To my committee members, thank you for your constructive feedback and support.

To my family, your love and encouragement kept me going through this journey, and to my friends, your support meant the world to me. I would also like to thank [Institution/Organization] for funding this research.

Special thanks to [Name], for your assistance in [specific task]. To everyone who helped in any way, thank you for making this possible.

CHAPTER 1

THE PROBLEM AND ITS SCOPE

1.1 Background of the study

Identity development is a lifelong process of discovering who we are, what we value, and where we belong. We do not grow up alone—our sense of self is shaped by the daily interactions we have with our family, friends, and community. Even when not directly stated, the expectations and values of those around us influence who we become. While we make our own choices and learn from experience, our identity is still deeply connected to the customs and values we were raised with. In short, becoming who we are is a mix of personal decisions and the shared stories of our community—our identity reflects both our individual journey and our group's collective story.

When we talk about how people form their identities, experts like George Herbert Mead (Stanford Encyclopedia of Philosophy, 2022) say it happens through our everyday interactions with the world around us. Our culture, family, religion, and education each play an essential role. These parts of our lives work together—they support each other rather than compete. Culture, in particular, provides the big picture, helping us understand the values and beliefs of our society. This allows us to know where we fit in with others and also shapes our own sense of self. Places like schools and other parts of society act as cultural guides, teaching us what's essential and showing us, through shared values and everyday expectations, what it means to be ourselves within a group.

Families play a crucial role in teaching children how to behave, express emotions, and understand right from wrong, thereby helping them build a sense of identity (Mastrotheodoros et al., 2024). Faith and traditions also guide us as we grow, offering values that serve as simple rules

for making moral decisions (Munandar et al., 2024). In school, learning goes beyond subjects like math or science—we also learn kindness, teamwork, and how to understand our place in the world (Offner, 2023). Together, our families, beliefs, and schools shape who we are and help us become our best selves. Education isn't just about learning facts—it also helps us become more caring, respectful, and connected to the people around us.

Families, faith, and schools all play a part in shaping who we become, reminding us that our identity is closely tied to the people and places that support us. Studies show that schools, especially, help us find out who we are. They are not just structures or classrooms-they are communities where we make friends, learn new things, and begin to figure out what is truly essential to us. Every institution has its own Vision, Mission, Goals, and Objectives (VMGO), which reflect the values and dreams of its community (Daniel et al., 2024). When these principles are practiced daily—not just displayed in posters or speeches, but shown through actions and relationships—they create a sense of belonging. As students, we learn not only from lessons and books, but also from how people around us behave and from our own experiences of both fitting in and standing out. All of these shape us into the individuals we strive to become, both within and beyond the school walls.

The true essence of a school can be seen in the way individuals treat one another daily, not in flashy slogans or decorations. What truly matters are the times when values come to life—when a student shows kindness, a teacher offers help, or friends work together toward a shared goal. As Huffines et al. (2023) explain, when a school's promises and values are reflected in how people treat one another, students are more likely to feel included and connected. Living out these values transforms a school into a true community—one where everyone feels seen, supported, and part of something meaningful.

According to Huffines et al. (2023) and Bui et al. (2024), having a shared purpose in universities is not just a symbol or slogan. It is a unifying vision that helps shape how teachers teach and how research is done, especially in different social and cultural settings. Similarly, Sakellarios and Gann (2024) explain that vision and mission statements are important parts of a school's identity. They are not just words placed on paper, but strong guides that shape what the organization believes in and how its members act. In brief, an organization's vision and mission are not a reflection of its audiences, but rather an enacted architecture of meaning, one that works out the collective purpose while maintaining coherence in organization, as well as developing identities for those who learn, teach, and lead within its auspices.

In recent years, people have started to see how important the VMGO (Vision, Mission, Goals, and Objectives) really is—especially in making sure that schools keep high quality, gain accreditation, and build a strong identity. Accrediting groups like Philippines Association of Colleges and Universities Commission on Accreditation (PACUCOA) explain that a school's quality is not only shown through how well its VMGO is written, but also by how well it is shared, understood, and practiced by everyone in the school community (Cagape & Prado, 2025). Studies also support this idea, showing that when stakeholders clearly understand and accept the VMGO, it helps the school stay aligned with its goals and improves its overall performance. This connection supports the quality assurance framework of PACUCOA (Limama et al., 2025). These institutions can articulate and demonstrate stakeholder ownership of their VMGO.

Central to school identity development is how teachers, administrators, and students interact with these institutional norms. Most of the literature in this domain has emphasized that both vision and mission statements serve as guiding texts, but also as powerful vehicles for influencing culture and Identity in educational settings (Sakellarios & Gann, 2024); (Bialik & Merhav, 2020). When this is the case, students, teachers, alumni, and community partners can

internalize the school's cultural script by embodying its values in their daily actions; they feel a sense of belonging to it, attach themselves to it, and experience personal pride for it.

However, other stakeholders do not share the same level of appreciation for the school's identity with the institutional culture. Identity-misalignments, or dissonances in some cases, are experienced when members perceive a gap between their own values and those of the school as portrayed in an official mission statement. Findings from studies on organizational values suggest that individuals are likely to disengage in the communication process, distrust one another, and become an under-integrated collectivity if espoused institutionalized values do not align with what is in people's hearts and minds (Miloud & Mourad, 2024). In schools, when there is misalignment between espoused values and the embedded student culture—where vision statements are spoken of but not lived—the perceived authentic nature of the school is known to be weakened, along with owners' confidence and investment in the Institution (Blodget, 2022) Without clear, shared values and identity, teachers may feel that they are just "any school" without individual investment or meaning (Wator et al., 2025)

Therefore, this study focuses on the gaps related to how the VMGO aligns or conflicts within Higher Education Institutions (HEIs), since the cultural aspects behind them are often overlooked. Most studies only talk about VMGO as a tool for guiding institutional direction, ensuring quality, and maintaining academic alignment (Limama et al., 2025). For instance, Limama et al. (2025) found that the stakeholders of the Bachelor of Public Administration program at Davao del Norte State College showed a very high level of understanding and acceptance of the VMGO. They saw it as an important part of keeping the institution clear, consistent, and well-organized. However, most findings tend to confine VMGO to static documents or evaluative judgments about how much stakeholders "accept" or are even "aware of" statements rather than acknowledging

them as living narratives that hold the potential to animate identity construction among students, faculty, and the larger community.

The focus of this study is part of the growing discussion about Institutional Identity, with special attention to the VMGO in Higher Education Institutions (HEIs). While many studies have looked at how aware and accepting stakeholders are of the VMGO, there is still a big gap in research that views these institutional statements as cultural expressions. This study highlights how the VMGO actively shapes and reflects the identity of an institution (Limama et al., 2025). In this sense, the study seeks to go beyond a descriptive account of awareness towards an interpretive understanding of how stakeholders internalize, perform, or contest VMGOs in their everyday academic and community environment. By adopting this perspective, the study also aims to draw attention to how a school's identity is underpinned or problematized through stakeholder alignment and dissonance of values with organizational norms.

This study matters because it takes a close look at how the heart and soul of a school—its core values—actually show up in the lives of everyone on campus. It is not enough for a school to have its mission and vision written on paper or posted on a wall. What really matters is how people demonstrate these values every day—by helping each other, being kind, and working together, whether they are students, teachers, or staff. When everyone follows the same values, the school feels like one big family. People feel a sense of closeness and are happy to be part of the college. However, if there is a disconnect between what the school claims to stand for and what people actually feel or experience, that sense of trust and belonging can break down. This issue is significant for students preparing to step into the world beyond school, since they will face their own struggles between what they have learned and what life expects of them. These are significant questions for schools right now, as they strive to keep pace with a fast-changing world and the many hopes that students and their families bring.

For Higher Education Institution Administrators. The results of this study will provide empirical evidence for HEIs' administrations regarding the extent to which their corporate values permeate community life. This investigation will help administrators and policy makers clearly identify where the fit between institutional values and stakeholder experiences is high, low, or a source of dissonance. In this way, the organization will have a solid foundation to build upon both in terms of success and challenges. Such feedback is helpful in institutional planning, curriculum design, and the creation of programs and policies. The results will also ensure that the college remains true to its mission while being responsive to the realities and desires of stakeholders. This research thus supports the college's ongoing struggle to maintain its identity and preserve the principles on which it was founded, as well as its good name, in both academic and moral formation.

For Teachers and Staff. This study also holds great significance for teachers and staff. They are more than just employees—they are role models and caretakers of the school's spirit. Teachers help students grow by sharing the school's values in every lesson, while staff show these same values by assisting and caring for everyone each day. This study looks at how teachers and staff live out these values, so we can see what is working well and where more support is needed. When everyone feels like they are working toward the same goal, it is easier to stay motivated and work as a team. If there are problems, discussing them together helps everyone learn and get better. The goal is to build a school where everyone feels proud of their work and the values they share.

For Students. Students are genuinely at the heart of the school, and this study holds special significance for them. Understanding how students perceive and embody the school's identity is crucial because it shapes not only their time on campus but also who they become as individuals. When students feel their values align with the school, the school sparks a deep sense of pride and belonging—they genuinely feel it. This harmony encourages them to embody the

school's core values—like faith, service, community, and striving for excellence—not only while they are in school, but also as they move on to make their mark in the world. However, when students are taught one thing and see another, it can be confusing and even hurtful, making it harder for them to trust the school or feel connected to it. By listening to these experiences, the college can learn how to support its students, ensuring that the lessons taught in class truly match what is lived and felt every day.

Academically, the study adds to the growing literature on institutional identity and value congruence in higher education. Although international research has discussed concepts such as person–organization fit, value congruence, and organizational identity, studies in the Philippines remain sporadic, particularly in HEIs, and have not yet explored how these ideas play out in practice. By focusing on the school's identity and exposing both alignment and dissonance between stakeholder categories, this paper fills a gap in the literature. It provides local data that can be benchmarked against results from other hospitals. The community dimensions of faith-based school life provide a foundation for future research in education, sociology, psychology, and organizational studies, which can use this work as a reference point for exploring the contributions these schools make to communities, organizational cultures, and stakeholder experiences.

1.2 Review of Related Literature

This chapter discusses other perspectives. It is about the importance of certain things for schools. It looks at what people think is essential. Related studies help schools know who they are. The chapter uses studies published between 2019 and 2025. These studies originate from the Philippines and other parts of the world. These intended studies were considered relevant to educational institutions, including how values shared in institutional documents and practices, particularly the VMGO statements, are addressed. The presentations will cover three things. These

things are all connected to the research. They are: value alignment, dissonance, and institutional identity. Value alignment means things that match. Dissonance means things that do not match. Institutional identity refers to a group's identity. First, the non-material cultural element, VMGO, is a philosophical articulation of how formal statements, such as these, are used as intangible tools to embed values into an organization and shape cultural norms. First, we will discuss the basic parts. Second, the idea is that we all agree on the same goals. In this way, it helps everyone at the school work together. The third theme, which examines identity dissonance in the light of VMGO, examines how conflicts in experience arise from discordant values and their detrimental consequences. This thematic framework corresponds to the study's aims in questioning alignment and misalignment with VMGO, ultimately situating them within a broader context of Identity production.

School VMGO as a Non-material Cultural Element

VMGO as the Cultural Foundation of Institutional Identity

Non-material culture is all about the unseen parts of our lives—our beliefs, values, morals, traditions, and even the ways we speak—that shape how we act and connect with others (Syahputra & Kamal, 2025;Vicar, 2023). In organizations, this kind of culture shows up in the values people share, the ethical standards they follow, and the philosophies that guide leaders. When these invisible threads are strong, vision statements become more than just words—they are brought to life and guide real actions, because people genuinely believe in them. Syahputra & Kamal (2025) note that values such as discipline, motivation, and ethical behavior help people feel that their own goals align with those of the organization, thereby fostering better teamwork. In the same way, Vicar (2023) highlights that leaders who act with honesty, show respect, and encourage teamwork can inspire others and help build a positive, principled workplace where everyone feels they belong.

Identity is more than just words written in a vision or mission statement—it comes to life in the daily actions, choices, and relationships of everyone in the school community. Teachers, students, and staff all play a part by living out the school's values and beliefs, making them real through their everyday interactions. People are asked to make sense of the school's guiding principles in ways shaped by their own experiences and the shared culture around them (Daniel et al., 2024). Vision and mission statements are important because they give everyone a clear picture of what the school stands for and help set expectations for how people should act and find meaning in their roles. These values are not just ideas—they are something people carry inside, helping them feel connected, included, and motivated to work toward something bigger than themselves. However, when what is written does not match what is actually practiced, it can cause confusion or discomfort. This gap between stated values and actual actions can cause individuals to question, resist, or feel less connected to the group. Research supports these ideas, showing that such gaps can affect how committed and satisfied people feel at work (Skaalvik & Skaalvik, 2023). High-value congruence among teachers is associated with greater professional commitment and job satisfaction, whereas misfit is associated with burnout and turnover intentions. However, a significant portion of this literature lacks broader cultural depth, including characteristics of non-material culture that form the basis for organizational behavior as part of analysis or impact on identity-building processes within educational settings. Closing this gap might offer a deeper understanding of how institutional culture supports or challenges adolescent issues of solidarity.

Beyond this perspective, cultural identity is predominantly associated with adolescents' psychosocial outcomes. Longitudinal studies have shown that when youth are allowed to investigate and invest in their cultural identity, they not only derive the most benefit from their activities but also feel a sense of belonging with others and continue to experience this feeling

throughout different social and institutional spheres (Ceccon et al., 2024). Research shows that when young people have opportunities to learn about and engage with their own culture, they tend to enjoy their activities more and feel a stronger sense of belonging. This sense of belonging stays with students, whether they're at school or out in the world (Ceccon et al., 2024). Inside schools, students are drawn to traditions, celebrations, and familiar routines that make the environment feel like home and help create happy memories. Borlaug et al. (2023) note that joining a group—whether it's a big school event or a small club—allows students and teachers to connect and work together. On the other hand, when a school feels owned by others rather than the students, it becomes harder for them to feel comfortable or truly accepted (Abbott, 2020; Matriano & Bueno, 2024)

According to Mazzer (2022), school culture arises from shared beliefs and practices that shape how members participate in educational life. Garcia et al. (2021) explain that the VMGO embodies the school's core values and character, guiding teaching practices and strengthening the institution's sense of identity. Similarly, Cunanan A. & Heretape (2023) found that stakeholders' understanding of the VMGO aligns with the school's cultural foundation, influencing decisions and encouraging meaningful participation. Mion et al. (2024) also emphasized that a mission statement is more than just words—it holds real social value by guiding school activities in line with shared norms and beliefs, showing the cultural importance of VMGO in schools. Similarly, Truong et al. (2025) revealed the two significant variables: the roles of organizational culture and strategic vision in shaping institutional outcomes, and VMGO as a policy construct that serves as an invisible yet compelling cultural framework to drive behavior and community feeling.

Stakeholder Awareness and Internalization of VMGO

To engage stakeholders effectively, researchers have stressed that awareness, understanding, and clear articulation of such elements are needed. When stakeholders are more aware of and aligned with the institution's VMGO, the school community becomes more culturally unified, allowing members to build shared meaning and purpose (Florentino & MST, 2023). Furthermore, Arado et al. (2019) maintained that the level of consciousness, recognition, and congruency of the VMGO among stakeholders are key determinants of their effectiveness in being internalized as one of the cultural threads in the school.

Accreditation and Institutional Reinforcement of VMGO Values

Allison (2019) noted that past cross-case studies on mission and vision statements revealed differences in how organizations interpret and apply them. Recent studies suggest that their actual value goes beyond simply stating an institution's purpose—they also reflect cultural meaning when values are clearly defined and practiced. Makie & Buado (2025) further found that when information is shared and understood, stakeholders are more likely to recognize and support the institution's goals together. The study on VMGO shows that VMGO's cultural impact depends not on its words, but on how deeply people have embraced and lived by its values.

In addition to institutional practices, accreditation standards also underscore the importance of VMGO in shaping organizational culture. Standards for Accreditation and Requirements of Affiliation | Fourteenth Edition - Middle States Commission on Higher Education emphasizes that institutional identity and cultural experience are increasingly validated to the extent that the VMGO are well-articulated, executed, and related to the lived experiences of stakeholders. These results indicate that VMGO serve as significant non-material cultural components that define both Institutional Identity and the macroscopic organization of the academic community.

VMGO Statements and Agents of Socialization

VMGO statements connect with the agents of socialization that help shape a person's identity. In close communities, values such as respect, responsibility, and compassion are taught early, forming the moral and social foundation that shapes children's growth and character (Ceccon et al., 2024). All of these are non-material culture values—invisible moral standards, beliefs, and shared meanings that shape how we perceive our roles and relationships in society. When institutional values align with family values—such as spirituality, service, and integrity—the sense of identity alignment becomes stronger. This connection is evident in studies of Catholic school communities in Australia (Sultmann & Brown, 2019). So, as an expression of intangible culture within educational activities, the VMGO would help to mediate concrete pedagogical values and ethical and spiritual objects of reference for all to share between the institution and the community. On the other hand, when family practices that emphasize discipline, faith, and social responsibility differ from those promoted by institutions, students may face inner conflict, making it harder for them to adopt the institution's identity (Vaknin & Schachter, 2025). This situation highlights how home and institutional non-material cultures significantly impact learners' development of their sense of belonging, and religion also tends to add depth to the consideration of value alignment, particularly with n organizations.

Religion Is More Than Just Rites. Beyond religious rituals, religion represents one type of non-material culture—the invisible set of rules and shared meanings that shape moral behavior and social relations. It serves as a malleable factor in adolescents' sense of belonging to the community, which in turn affects their psychosocial outcomes (Ceccon et al., 2024). In the academic community, the VMGO manifests as a corresponding articulation of this non-material culture, which turns religious and ethical norms into institutional ideals and principles. When

individuals align their personal values with those of the organization, they begin to feel a sense of their own beliefs and the institution's identity. This alignment fosters a genuine sense of belonging and identity within the organization (Stacey & Mashayekh, 2025). On the other hand, inter-religious noise can undermine engagement by posing institutional disputes against individual faith commitments and the integrity of an institution's identity.

School vision, mission, goals, and objectives (VMGO), therefore, constitute significant non-material cultural artifacts that encapsulate institutional identity and guide shared purpose. They are not merely formal declarations but texts with cultural significance that contain values within, and they create symbolic meaning for schools and universities (Bialik & Merhav, 2020). VMGO Organizational Outcomes point the direction and culturally ground disparate constituencies in common notions of why we do our educational work.

In addition, there needs to be stakeholder awareness and buy-in from all quarters of VMGO if these values are to be effectively integrated within the institutional ethos. Researchers have established that when students, faculty members, and communities internalize the VMGO, the content of these statements transcends mere rhetoric and becomes lived cultural practices (Michael et al., 2022; Clemente et al., 2021). This change demonstrates how VMGO contributes to departmental identity and coherence.

The cultural aspect of VMGO is in its ability to harmonize personal beliefs and collective ideals. According to studies, once individuals internalize institutional core values, the VMGO fosters a sense of direction and commitment that guides membership in an educational organization (Dagdag et al., 2024). They also act as symbolic tools that enable stakeholders to make sense of education in a particular setting (Domingo et al., 2025).

In the Philippines, while there are multisectoral investigations that highlight the understanding and acceptability of VMGO as important to sense-making and institutionally.

Findings show that VMGO crafts cultural scripts, which serve as structures of meaning for how institutions are understood and for how contextual actors internalize value connotations (Belango & Joy Escobar, 2021; Garcia et al., 2021). The points raised by Belango et al. and Garcia et al. strengthen the role of VMGO as an ingredient of a culture that connects identity to educational activities.

Furthermore, academics have observed that VMGOs are not fixed but continually renegotiated in organizations. The language in which they speak, gestures, and evolve identity narratives and cultural positioning, especially in the higher education sector (Santos, 2025).VMGO operates as a virtual set of cultural frameworks that are flexible in the face of new demands while still retaining some symbolic meaning for stakeholders (Morallo & Cedron, 2025).

At the international level, VMGOs are considered cultural insignia of institutional development and identity-construction. Comparative analyses reveal efficacy in promoting teacher motivation and organizational improvement in diverse regions (Bui et al., 2024; Moraal et al., 2024). These insights indicate that mission and vision statements are textually constructible reports of wonders in the cultural unfolding of educational systems globally.

Large international frameworks also emphasize that VMGO belong to the broader social and cultural context of education. UNESCO (2021) maintains that institutional goals should be anchored in the values of solidarity, equality, and human development, thereby aligning them with a broader cultural mandate. Likewise, mission and vision statements are foundational in setting the identity of higher education institutions, offering a veneer of symbolism that goes beyond organizational performance (Loyack, 2025).

The cultural power of VMGO lies in its agglutinative, motivating, and conciliatory forces within a unified educational identity. They perpetuate values across the school's space, strengthening the school's symbolic mission while adapting to the current cultural idiom (Astorga

et al., 2022; Sakellarios & Gann, 2024). As intangible cultural artifacts, VMGO provide the scaffolding by which institutions articulate who they are, what they value, and the futures that they wish to achieve.

Identity Consonance through VMGO

Alignment of Personal and Institutional Values

Recent scholarship describes identity consonance as the psychological and cultural harmony that occurs when individuals perceive alignment between their personal identities and the dominant values or purposes of the institution to which they belong. As Clark (2025) noted, when educators experience a professional identity that aligns with their sense of belonging, it strengthens their collective esprit de corps and retention rate. Conversely, identity dissonance occurs when an individual's beliefs conflict with those of institutions, often leading to detachment or a fragmented sense of identity.

In colleges and universities, students feel a stronger sense of belonging when their personal values align with the school's vision, mission, goals, and objectives (VMGO). Sultmann & Brown (2019) explained that a school's mission helps teachers grow not just in their jobs, but also as people. When teachers align with the school and its teachers' group, they don't just feel like they fit in—they also feel called to do their work. Laurente & Laurente (2019) also found that when everyone at a school understands and accepts these values, it builds a shared school culture, trust, and a common sense of purpose. This congruence between personal and Durkheim's values is related to Durkheim's theory of collective consciousness, which refers to the common morality or normative system that joins individuals together as members of a society (Durkheim et al., 2014). In schools and universities, the collective conscience is expressed through moral obligations, ceremonies, and narratives that make up these institutions. Thus, when identity

consonance predominates, the VMGO functions as a piece of cultural work at the non-material level, promoting the non-visible direction of collective behavior, solidarity, and well-being/opportunities in terms of meaning and belonging within educational society.

VMGO as Lived Non-material Culture

Recent studies show that it's not enough for a school to talk about its mission and vision—everyone needs to actually live them out each day. When students, teachers, and school leaders truly believe in and live by the school's values, these values influence how they act and treat one another. You can see this happening most clearly when the school's vision, mission, goals, and objectives (VMGO) become part of daily routines and friendships, not just words on a wall. Fraser (2021) saw that when school leaders truly believe in and follow their school's mission and vision, they feel more inspired and work harder to support their school. These leaders use the school's central values to guide their choices and actions every day, which helps keep the school community strong. Similarly, Solola (2020) found that leaders' congruence between their espoused and enacted values, as well as their organizational identification, allowed members to experience a sense of authenticity and belonging within the institution. Collectively, these studies confirm that in educational settings, alignment between personal beliefs and institutional values, mediated through the VMGO, constitutes a form of non-material culture that cultivates a culturally coherent environment in which meaning, belonging, and moral purpose are shared across the community.

Scholars have studied how people feel when their personal values align with the values of their school or workplace. This sense of harmony is called consonance, and it helps shape who we are, both as people and in our jobs. For example, Abramson and Schachter (2024) found that new teachers adjust more easily when the school's expectations align with their personal beliefs. This means it's easier for them to grow and feel like they belong. Jang and Lee (2024) also found that

students feel more comfortable and trusting when school leaders and the community share their values.

Similarly, Kalogeropoulos et al. (2021) found that teachers who reflect on their own values and align them with the school's values are more motivated, honest in their work, and feel that their job matches who they are. Building on these ideas, Aktaş (2023) found that teachers, whether teaching in person or online, use the school's mission and vision to guide their beliefs and align their goals with the school. This means the VMGO isn't just something written down; it actually helps everyone work together and feel connected, giving both teachers and students a shared sense of purpose.

Transitioning from the individual to the collective dimension, scholars have underscored that value alignment within the VMGO framework not only cultivates unity but also enhances adaptability to organizational change and engagement with collective goals. When the school's core values truly match what people believe, it brings everyone together and helps the school stay strong, even when things change. When teachers and students feel that their values align with the school's, they become more willing to work together, explore new ideas, and support one another. For example, Deng et al. (2023) found that people who see this kind of value match are more open to change and help make the school more flexible. Cao & Zhang (2023) found that teachers with shared values are more motivated and committed to their work. Yang et al. (2022) also noticed that when teachers and schools share the same values, teachers feel more confident, included, and willing to help their coworkers. Students also benefit. Johnson et al. (2024) found that sharing common values helps them feel a sense of belonging, even when they differ from one another. Leah (2024) explained that when a school's mission is clear and lived out, it helps everyone put those values into action in daily life. All of these studies agree: when people and institutions share values, everyone is more engaged, willing to grow, and connected as a community. This is how the

VMGO helps the school grow stronger and more united. Taken together, these studies show that when personal and institutional values are in sync, people are more engaged, open to change, and connected as a group. In this way, the VMGO becomes a powerful force for growth and unity within the school.

Extending these insights, scholars such as Clemente et al. (2021) and Belango & Joy Escobar (2021) emphasized that VMGO operates as a non-material anchor that shapes how individuals state themselves within the educational community. Clemente et al. (2021) highlighted that the meaningful interpretation and acceptance of institutional statements allow stakeholders to transform formal declarations into lived experiences, thereby sustaining educational identity. Similarly, Belango & Joy Escobar (2021) found that students and educators who perceive alignment between their personal values and the VMGO express a stronger sense of belonging and pride, underscoring the relational dimension of value consonance.

Meanwhile, at the student level, consonance between institutional philosophy and personal identity has also been shown to influence engagement and the broader school climate. Vaknin & Schachter (2025) demonstrated that students who perceive their home and school values as consistent develop a deeper identification with the institution, whereas value incongruence weakens their sense of belonging. In parallel, Abbott (2020) found that discrepancies between family and school values disrupt teacher–student relationships, highlighting the importance of cultivating harmony between personal convictions and institutional visions to reinforce identity consonance across multiple social environments.

Building upon the discourse on alignment and consonance, scholars have asserted that institutional identity achieves its most authentic expression when the VMGO is not merely articulated in documents but enacted through daily practices and interactions. This shift from rhetoric to lived culture highlights how non-material culture operates within organizations—not

as abstract ideals, but as guiding principles embodied in behavior, decision-making, and relationships. Michael et al. (2022) emphasized that stakeholder awareness of a university's VMGO strengthens the institution by linking institutional ideals to tangible, lived actions. Supporting this, Astorga et al. (2022) introduced the VMGO Impact Model (VMGOIM), which demonstrates that alignment between institutional goals and stakeholder values yields measurable effects on organizational culture, belonging, and identification. Collectively, these studies reaffirm that VMGO consonance is most potent when it transcends rhetoric, transforming from textual declaration into embodied practice that sustains a cohesive, value-driven institutional identity.

In addition, the idea that institutional authenticity emerges when the VMGO is enacted rather than merely declared, recent research extends this view by emphasizing that identity consonance is not only individual or organizational but also collective and multisectoral. In other words, the enactment of VMGO becomes most effective when all stakeholders—administrators, faculty, students, and external partners—actively participate in shaping and living out institutional values. Garcia et al. (2021) found that VMGO acceptability among teacher education stakeholders fosters institutional trust and coherence across constituencies, suggesting that shared understanding builds a culture of mutual accountability. Similarly, Dagdag et al. (2024) revealed that when stakeholders institutionalize and embody the institution's mission and vision, the institution becomes part of the institutional fabric, reinforcing an integrated and participatory educational identity. These findings collectively indicate that consonance is cultivated not through top-down mandates but through inclusive, dialogic engagement, in which an institution's meaning within material culture is shaped.

The institution's nature of institutional identity further underscores the dynamic role of VMGO in shaping notions of belonging and meaning over time. Santos (2025) states that mission and vision statements serve as linguistic anchors of institutional identity, tracing how language

constructs and reconstructs organizational self-definition. Complementing this, Domingo et al. (2025) demonstrated that students who actualize identity consonance with the institution's philosophy, vision, and values transform abstract ideals into lived experiences. Thus, consonance is achieved when institutional language and values are consistently enacted, fostering a shared sense of purpose within the academic community.

Consonance as a Source of Institutional Cohesion and Adaptability

Ultimately, as institutions navigate complexity and change, consonance emerges as an adaptive cultural mechanism that preserves unity amidst diversity. Borlaug et al. (2023) found that nested identities—organizational, disciplinary, and professional—require continuous negotiation, and that vision and mission statements serve as symbolic anchors that maintain cohesion. Likewise, Matriano & Bueno (2024) highlighted that school orientation and reorientation programs play a crucial role in aligning stakeholder values with the organization's institutional values, ensuring the continuity of a shared moral compass. Collectively, these studies affirm that identity consonance through VMGO is a living, evolving process—one that is continuously negotiated, enacted, and reaffirmed through shared purpose, participatory engagement, and embodied values.

Identity Dissonance through VMGO

Misalignment between Personal and Institutional Values

Identity dissonance arises when stakeholders perceive a misalignment between their personal values and the VMGO's institutional values, creating tension that weakens identification and engagement. Macadangdang et al. (2022) revealed that although stakeholders at the College of ICT in Bulacan State University understood its goals and objectives, ambiguities persisted,

leaving individuals uncertain about how their identities connect with the institution's ideals. Similarly, Laurente & Laurente (2019) found that while stakeholders of Leyte Normal University were generally aware of the VMGO, varying levels of acceptance indicated that not all groups experienced alignment—suggesting that value-based dissonance can subtly emerge within institutional structures.

Organizational Anomie and Cultural Disruption

Extending this discourse, studies on organizational anomie have provided a deeper lens for understanding the consequences of such misalignment. Anomie, initially conceptualized by Émile Durkheim, refers to a state of non-ness or the erosion of shared social meaning. In modern institutions, it manifests when organizational ideals lose coherence with individuals' lived experiences. Watermeyer et al. (2025) demonstrated that academic professionals who experience organizational anomie report diminished purpose, belonging, and engagement—reflecting the psychological consequences of identity dissonance. Likewise, Chen et al. (2025) found that anomic conditions within educational institutions arise when institutional values become detached from educators' professional identities, resulting in role confusion and disengagement. In this sense, identity dissonance reflects not merely personal tension but a cultural disruption—an anomic condition in which institutional values fail to provide meaningful moral direction. Thus, maintaining value coherence through the VMGO organization's efforts to preserve its non-material culture and foster a sense of purpose and belonging among its members.

Expanding on this, Fraser (2021) emphasized that when institutional values are poorly practiced or inconsistently communicated, educators experience uncertainty and disengagement, signaling ruptures in professional identity. Similarly, Solola (2020) demonstrates that discrepancies between leaders' stated and enacted values affect leaders' organizational trust and members'

identity, which in turn affects members' commitment. Building upon members' rights, Cunanan A. & Heretape (2023) found that insufficient awareness and inconsistent implementation of the VMGO exacerbate stakeholders' sentiments, diminishing stakeholders' sense of belonging and connection to institutional purpose. Taken together, these findings reveal that when institutional ideals fail to resonate or are inadequately embodied, value incongruence disrupts unity and weakens organizational culture. Supporting this view, Mausz et al. (2022) reported that unresolved dissonance often results in emotional strain and psychological distress among professionals torn between personal beliefs and institutional expectations—further undermining the cohesion that VMGO seeks to foster.

Cultural Mismatch and Stakeholder Alienation

Beyond these institutional inconsistencies, dissonance also stems from broader cultural and social mismatches. Feasel et al. (2024) showed that first-generation students who encounter norms at odds with their cultural backgrounds struggle with coping and help-seeking behaviors, illustrating how misalignment destabilizes identity within academic settings. Similarly, Ives & Castillo-Montoya (2020) found that cultural incongruence in universities undermines student engagement and belonging, underscoring the need for institutional expectations to reflect diverse identities. Extending this perspective, Lin & Yang (2025) explained that parental involvement, grounded in cultural mismatch theory, can mitigate social-emotional strain, suggesting that systemic dissonance between institutional goals and lived values directly impacts well-being. Collectively, these studies affirm that when institutional philosophy fails to connect with its members' cultural and personal identities, dissonance emerges, fracturing both integration and institutional cohesion.

At a deeper level, sustained cultural or value misalignments perpetuate disengagement and uncertainty. Feasel et al. (2024) found that perceived cultural mismatch and discrimination increase status uncertainty, negatively affecting student outcomes and confidence. Similarly, Vasquez-Salgado et al. (2021) noted that cultural dissonance within academic contexts can lower self-efficacy, but also emphasized that targeted interventions can help bridge these gaps by aligning institutional and student values. In parallel, Vasquez-Salgado et al. (2021) demonstrated that discrepancies between home and school values contribute to learners' psychological strain, limiting learners' integration within the school environment. Collectively, these findings underscore that unresolved dissonance erodes both individual belonging and institutional solidarity.

In some cases, the roots of dissonance lie not in cultural differences but in the disconnect between institutional texts and lived experiences. Bryan Nozaleda (2019) found that while stakeholders at Cagayan State University were aware of the VMGO, not all accepted it, revealing a gap between institutional expectations and personal convictions. Likewise, Ramos (2021) observed that even among BPEd program stakeholders, awareness did not guarantee alignment; both faculty and students questioned the relevance of the VMGO to their academic and professional goals. These examples illustrate that awareness alone does not guarantee consonance and that unresolved gaps may manifest as identity dissonance.

Further studies indicate that dissonance intensifies when institutions revise or articulate the VMGO without addressing stakeholder perceptions. Mon et al. (2024) found that at PRMSU, reactions to the revised vision and mission varied, with some expressing doubts about its relevance to program objectives. In a similar vein, Michael et al. (2022) reported that at Laguna State Polytechnic University, while the VMGO was broadly acknowledged, stakeholders differed in

how they internalized it, suggesting that institutional identity can fragment when formal statements diverge from lived realities.

Structurally, symbolic inconsistencies further complicate institutional coherence. Sulastri et al. (2021) observed that leadership practices sometimes fail to embody declared institutional ideals, thereby generating contradictions that weaken collective Identity. Together, these analyses reveal how structural misalignments can compromise institutional representation and the integrity of identity.

Parallel to these structural inconsistencies, other scholars emphasize that dissonance emerges when institutional ideals remain aspirational but detached from implementation. Sethi et al. (2023) documented how universities struggle to translate their VMGO into actionable strategies, fostering disillusionment among stakeholders. Correspondingly, Adebanke Olusola et al. (2022) reported that even prestigious African universities often adopt visionary mission statements that fail to reflect operational realities, creating a disjuncture that undermines both credibility and institutional unity. These findings affirm that ideals confined to rhetoric rather than practice inevitably magnify identity dissonance.

Viewed globally, dissonance is also shaped by cultural and contextual diversity. Al'Abri et al. (2022) found that in schools' visions emphasizing global citizenship, the practical grounding is often lacking, leading to dissonance between inspirational ideals and actual student experiences. Similarly, Daniel et al. (2024) observed that school vision statements tend to highlight abstract values without ensuring their relevance to daily learning contexts, thereby reinforcing identity gaps. These patterns suggest that institutional ideals detached from local realities risk alienating rather than unifying their stakeholders.

Finally, scholars highlight the more profound implications of VMO in shaping institutional identity and belonging. Chaudhry (2019) argued that although vision and mission statements are

essential in defining identity, their influence weakens when stakeholders fail to see themselves reflected in them. Supporting this, Gomez et al. (2022) reported that at Cavite State University, perceived misalignment between personal and institutional identities hindered the cultivation of a unified culture. Collectively, these studies affirm that while VMGO remains central to articulating institutional purpose, it can also become a potential source of dissonance when ideals are disconnected from the lived realities and values of the academic community.

Implications for the Study

The review explored the school's VMGO as a non-material cultural school, highlighting how these institutional statements transcend administrative formality to become the moral and symbolic backbone of educational life. It is suggested that the VMGO serve as invisible threads connecting shared beliefs, ethical norms, and collective aspirations within schools. When deeply understood and practiced, these ideals foster a unified sense of purpose that strengthens institutional identity. This VMGO, therefore, emphasizes the VMGO's cultural power in shaping how members of the academic community think, act, and belong—suggesting that cultural embodiment, not mere awareness, determines the authenticity of institutional values.

Likewise, the researchers explored identity consonance through VMGO, focusing on how harmony between individual and institutional values enhances belonging and engagement. Studies reveal that when teachers, students, and administrative staff institutionalize the meaning of the institution's mission and vision, the institution deepens, leading to stronger collaboration and increased professional motivation. Consonance serves as a stabilizing force that fosters trust, unity, and resilience, particularly during organizational transitions. Hence, fostering identity consonance requires inclusive leadership and continuous reflection to ensure the VMGO remains the school's evolving expression of its shared culture.

The researchers also studied the converse of consonance—identity dissonance through VMGO—and have revealed the cultural and emotional rifts that occur when institutional ideals are misaligned with lived experiences. The literature shows that such misalignment can lead to confusion, disenchantment, and even loss of institutional belonging. Dissonance often emerges when the VMGO are perceived as symbolic rhetoric rather than guiding principles embodied in daily practice. This theme underscores the crucial need for coherence between declared values and actual organizational behavior—without which institutional authenticity and stakeholder trust are compromised.

Collectively, the literature presents a clear research gap and a critical insight. While many studies affirm the importance of the VMGO, few investigate how these statements function as lived cultural processes that shape and sometimes challenge institutional identity. This gap invites a closer look at how alignment and dissonance coexist in educational settings, influencing the moral and cultural foundations of schools. By exploring these dynamics, the present study aims to deepen understanding of how institutional identity is negotiated, sustained, or disrupted through the continuous interplay between personal values, organizational ideals, and the VMGO as cultural mediators.

1.3 Theoretical Framework

Theory of Collective Conscience (Durkheim, 1893)

Émile Durkheim (1858–1917) was a French sociologist who is regarded as one of the founders of modern sociology. He had a profound interest in how societies held together by common moral beliefs could reconcile individual differences. In his seminal work The Division of Labor in Society (1893), Durkheim based this inquiry on the concept of the Collective Conscience,

which he defined as the shared values and morals that bind members of society together. He explained that these shared values create a moral framework that guides behavior, strengthens cooperation, and ensures social stability.

Durkheim believed that the strength of a community depends on how well its members internalize shared moral norms, which serve as the foundation for solidarity and ethical conduct. His ideas continue to shape how scholars and institutions understand moral education, value formation, and the development of a cohesive and responsible community.

Origin of Collective Conscience and Consciousness

The concept of collectivism first appears in Durkheim's The Division of Labor (1893). He described it as the shared system of moral ideas that binds society together. In traditional societies, unity was defined by shared values and life experiences — this he called mechanical solidarity. As societies develop, he argued, mechanical solidarity shifts to organic solidarity: Social solidarity is based on the need for one another who perform different functions within a shared system.

Later social discussions, as explained by Ritzer (2014), suggest that the collective conscience is not merely a closed or theoretical notion but also an actual, living social entity that develops through human interactions. It is perpetuated and reinforced through shared communication, rituals, and education. These are the processes by which people can internalize collective moral values and transform these into personal convictions that guide behavior and lead us towards a more harmonious society.

Within the school context, the collective conscience emerges through everyday experiences, such as classroom routines, community service, and institutional settings, which express the school's moral and cultural values. School's sacred practices enable students and

teachers to live out the institution's ideals. As a result, institutions align with the collective identity, fostering a more profound sense of belonging, responsibility, and solidarity.

Discussion of the Theory

Specific to the study, the researchers will be using his Theory of Collective Conscience, which posits that the unity and stability of any group are based on uniform ideas, beliefs, and moral norms that its members follow. These shared moral understandings serve as a collective guide that influences how people behave and interact. As defined by Durkheim (2014), collective conscience refers to the shared beliefs and feelings of people within a given community. It is something that transcends the individual and orients social life with a sense of moral order and mutual membership.

In contemporary views, such as those discussed by Ritzer (2014), the collective conscience is not only a structure that organizes society but also a process that grows through shared experiences, communication, and participation in institutional activities. People renew this collective moral awareness through regular interactions, rituals, and education that express and reinforce community values.

Within educational settings, the Collective Conscience operates through the values and traditions of the HEIs. Its shared moral foundation is embodied in the school identity, represented through the Vision, Mission, Goals, and Objectives (VMGO). These statements are more than formal declarations; they express the moral community that guides the school community's lives, learns, and intercommunity's students and teachers embrace and practice these institutions, they strengthen the institution's moral unity and identity. The institution's consistent actions show a living collective conscience that promotes respect, integrity, and faith. However, when these values

are not fully lived out or understood, differences in behavior and attitudes appear. It weakens the moral connection among members, leading to moral dissonance.

Durkheim's theory helps explain why Durkheim's alignment is within institutional communities. It demonstrates that a community's moral life depends on the community's transmission and practice of shared values. In this way, the collective conscience serves as both the moral guide and the foundation of solidarity within an HEI.

This study is closely related to the present investigation because it offers a sociological interpretation of the impact of shared moral values and organizational identity on individual and collective levels within a school community. In light of this theory, the researchers can understand the role of school identity as critical to sustaining teacher-student morale within an HEI.

Durkheim's notion that the moral life of society rests on shared beliefs captures how an educational institution preserves its culture through the shared system of common values and practices. Through collective participation in rituals, classroom activities, and community engagements, stakeholders reinforce these values, creating a unified moral culture that supports ethical behavior. By regularly engaging in rituals, classroom practices, and community settings, stakeholders strengthen these values, fostering a cohesive moral culture that promotes ethics and cooperation.

The theory also helps to explain what happens when the collective conscience loses its hold. No, people are not forced to do what they ought. However, when school teachers and pupils behave in ways contrary to institutional values, such as using foul language or disregarding the school's accepted norms, it becomes evident that the settled moral communal agreement is eroding. Durkheim specifically noted that such contradictions undermine the foundation of moral order and fragment solidarity. The theory also explains what occurs when the collective conscience weakens. When teachers and students act in ways that contradict institutional values, such as

using inappropriate language or showing indifference to school norms, it signals a weakening of shared moral understanding. Durkheim emphasized that such inconsistencies disrupt the collective moral foundation.

Durkheim's idea that a community's culture depends on a community's system of beliefs reflects how an educational institution sustains its culture through shared values and practices. When members of the school internalize the same moral standards, they develop a sense of belonging and responsibility that guides their actions and behaviors. In HEI, this shared moral foundation is embodied in the school institution's vision and mission, and through collective participation in rituals, classroom activities, and community engagements, stakeholders reinforce these values, creating a unified moral culture that supports ethical behavior and cooperation.

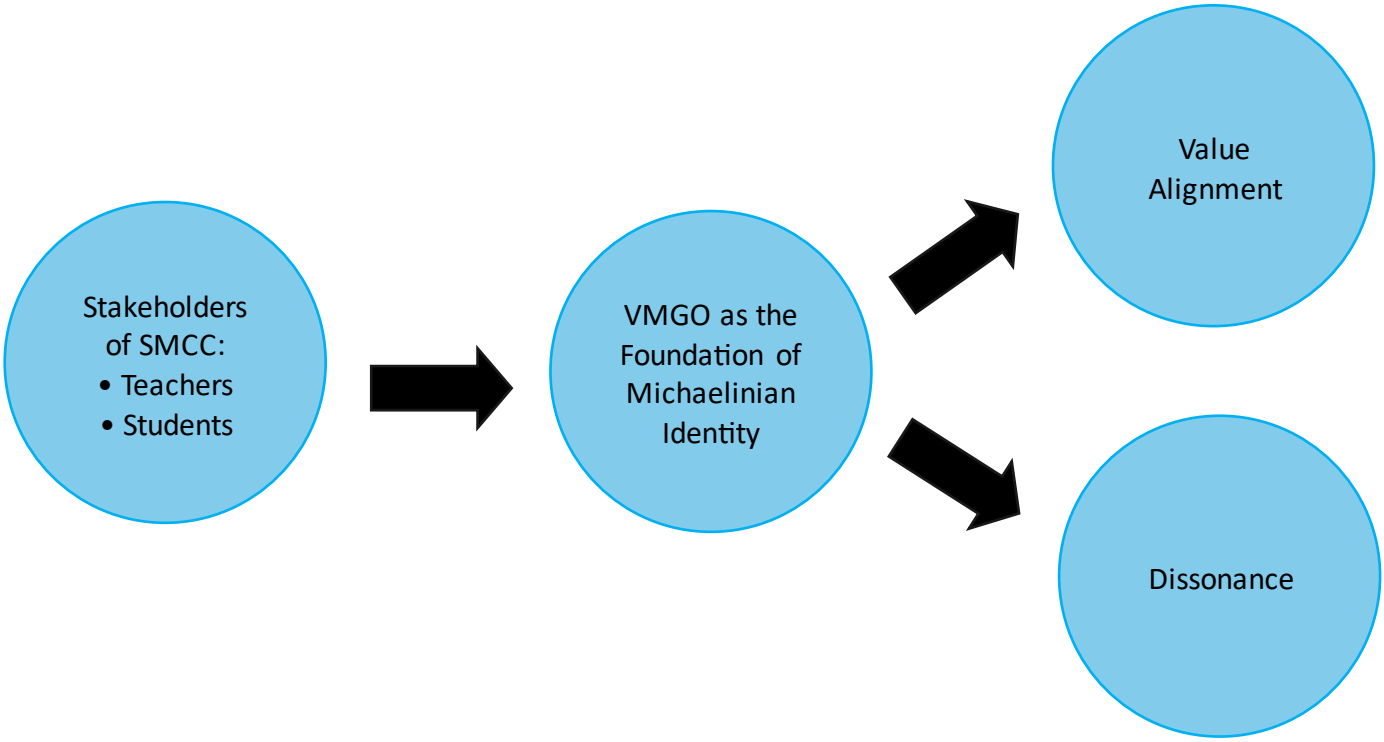

By applying this theory, the study aims to understand how moral alignment or dissonance among the institution's stakeholders shapes its collective conscience. The study aims to demonstrate how consistent moral education, active participation, and clear communication of values can strengthen alignment and reinforce a shared sense of purpose. The theory of Collective Conscience, therefore, provides a strong foundation for understanding how HEIs can build and sustain a cohesive moral community where the identity is not only taught but genuinely practiced by members of the institution.

Conceptual Framework

The conceptual framework illustrates how stakeholders of SMCC, specifically teachers and students, align their personal values to the school's identity, which represents the Michaelinian Identity as anchored through its VMGO. Within this framework, teachers and students, as key stakeholders, interact with and interpret the Michaelinian Identity as expressed through it's VMGO

based on their lived experiences and personal beliefs. This interaction leads to two possible outcomes — value alignment or dissonance.

When value alignment occurs, stakeholders internalize and embody the school's identity, resulting in strengthened unity, shared moral understanding, and a deeper sense of belonging to the Michaelinian community. Conversely, dissonance emerges when personal values doesn't match or align to the school's identity leading to misalignment and weakened institutional identity. Grounded in Durkheim's Theory of Collective Conscience, this framework highlights how shared moral values within an institution shape collective identity and influence the moral connection between individuals and the school community.

1.4 Objectives of the Study

The purpose of this study is to explore the extent to which stakeholders engage with vision statements as underpinning institutional identity, in a manner neither static nor uniform, but rather through an interplay of alignment and dissonance. Hence, this research intends to shed light

on the role of institutional identity in balancing stability and change, thereby finding power in alignment while also embracing the potential for transformation through dissonance. By recognizing these two, institutions can more consciously sustain an identity and rootedness that is also attentive to new contexts. Hence, this case study aims to answer these three questions.

Research Questions

1. How do the institution's stakeholders perceive the institution's identity (values)?
2. How does the perception of institutional identity influence the character (personal values) of stakeholders?
3. How do stakeholders react to institutional practices (consonant or dissonant).

1.5. Scope and Limitations

The study is delimited to examining stakeholders' dissonance among them in relation to their construction of institutional identity. Specifically, it aims to understand how these values are perceived, internalized, and expressed through everyday practices, rituals, and orientations within the educational community. By focusing on this particular context, the research aims to uncover how institutional identity is continuously affirmed, challenged, or reshaped through its members' lived experiences.

The participants in the study are teachers and students institutionally involved in the institution's learning environment and its cultural and moral dimensions. The researchers chose these participants because of their extensive experience, which gives them a unique perspective on how the school's identity has grown and changed over time—both personally and as a group. The research will take place during the 2025–2026 academic year. By including only these groups, we're highlighting the voices of those who have truly helped shape the school's character, while

choosing not to involve alumni, outside organizations, or people with only a distant connection to the school.

This study uses a qualitative approach to deeply explore people's experiences instead of relying on numbers or statistics. Instead of measuring how often values align or conflict, focus on how participants express their attitudes, behaviors, and sense of belonging in daily life. By listening to their stories and understanding their experiences, this study aims to offer a deeper, more meaningful view of how a school's identity develops and changes through its people.

1.6 Definition of Terms

The following terms are operationally defined to determine the exact definitions of the terms as used in this study:

Alignment. In this research, consistency refers to the degree to which staff members' personal values align with the institution, as reflected in their decisions, behavior, and verbal affirmations.

Collective Conscience. In this study, the shared moral values and collective consciousness of stakeholders united by a single institutional framework are referred to.

Commitment. This concept refers to stakeholders' views on the depth of their engagement and loyalty to an organization's values as they practice within the organization's practices and adhere to normative standards.

Character (Personal Values). Personal values are the beliefs and guiding principles that influence an individual's thoughts, behaviors, and decision-making.

Dissonance. Within the scope of this study, the conflict or misalignment between stakeholders' values and institutional values leads to inconsistencies in perceptions, attitudes, or behaviors.

Institutional Culture. In the context of this study, it refers to the climate of norms, customs, and practices with which stakeholders are involved, which directs stakeholders' responses and perpetuates stakeholders'

Institutional Identity. This research examines the unique ethical code, values, and principles that characterize an institution and influence how stakeholders view and act accordingly.

Internalization. The term refers to the manner in which stakeholders internalize institutional values into their own belief systems that guide conduct and decision-making.

Moral Alignment. This study examines the extent to which individuals' ethical values align with their cultural values and how these values impact attitudes/behaviors.

Practices. In the current study, these are considered repeated patterns of institutional practice, which can be either formal or informal, serving to source or influence a person's value alignment or dissonance.

Institutional Stakeholders. This concept encompasses individuals specifically associated with the institution—students, faculty, staff members, and collaborators or entities participating in projects—who are analyzed for their perceptions, allegiances, and actions.

Value Orientation. For this study, the focus is on stakeholders' perception of their most essential virtues in relation to institutional values.

CHAPTER 2

RESEARCH METHODOLOGY

2.1 Research Design

This study will use a qualitative research design and focus on a single case study. By doing so, the researchers can take a close look at how people form their identities within the school, especially when their personal values either align or clash with the school's VMGO. By examining real experiences and how values manifest in daily life, this approach provides a deeper, more personal view of how identity and values interact within a specific school setting (Creswell & Poth, 2016). It also helps us understand the real-life dynamics of value alignment or conflict, which are key to seeing how identity takes shape.

2.2 Research Methods and Materials

This paper applies a wide range of materials and methods for an in-depth empirical analysis. The primary tool for data collection is a researcher-designed semi-structured interview. It is specifically created to gather detailed information about teachers' and students' experiences through in-depth interviews. Focusing on how these experiences relate to the school's vision statement.

Before collecting any data from the school, the researchers will first ask for the school's permission to conduct the study. After being granted entry, the researchers will seek approval from their own dean to conduct the research in every department. Once approved, they will reach out to the dean of each department and provide a formal request letter asking for permission to identify students who meet the study's criteria. For teacher participants, the researchers will coordinate with the HR office, submitting a formal request to identify teachers who qualify based

on the criteria. After receiving the list of eligible participants, the researchers will use purposive sampling to select individuals who can provide meaningful insights based on their roles and experiences in the institution. This step ensures that those selected—such as long-term students and faculty—can genuinely represent the perspectives needed for the study.

Next, the researchers will clearly define the research goals and identified the type of participants they wanted to include. The main aim was to explore how people see the school's identity, so they needed voices with real, long-term experience at the institution. That's why they included students who were at least 18 years old and had studied at the school from elementary through college, as well as teachers who had taught there for at least ten years and still lived nearby. By setting these guidelines, the researchers made sure that everyone involved could share meaningful and relevant insights, keeping the study focused and fair.

Third, the researchers will identified participants who met the study's criteria and invited them to participate in the interviews via a formal letter. They will also meet with them in person to explain the purpose of the survey, answer any questions, and make sure they understood that participation was entirely voluntary. This process helped establish trust and fostered a cooperative and open relationship with the participants.

Fourth, after participants agreed to take part, the researchers will chose semi-structured interviews as the primary data collection method. This method allows open and flexible conversations while still keeping the focus on the main topics. It was chosen because it helps gather clear and meaningful stories about deeper ideas, such as value alignment and how identity is formed.

Fifth, data collection was carried out with careful planning and strict attention to ethical standards. The researchers will first prepared an interview guide with open-ended questions that encouraged participants to share their thoughts freely, focusing on perceptions of school identity

and the influence of institutional values. Each interview lasted about 45 to 60 minutes and was conducted in a private, comfortable setting, with participants giving prior consent for recording and transcription. To ensure ethical conduct, the researchers will obtain signed informed consent forms that explain the study's purpose, risks, and benefits. Participants' identities were protected using pseudonyms, and any potential power imbalance—such as if the researcher is also an educator—was addressed by assuring participants that they could withdraw from the study at any time without any negative consequences.

After collecting the interviews, the researchers will carefully write everything participants said, word for word, so that they wouldn't miss any of their unique voices or important details. The researchers will then take a close look at these transcripts using qualitative methods, especially thematic analysis. This meant looking for patterns and ideas that kept coming up—like challenges with aligning values or the ways school traditions reinforce identity. To stay organized and ensure a thorough analysis, they will use reliable software tools such as NVivo and ATLAS.ti. By purposely selecting participants, they will ensure that the stories we gather are relevant and useful in answering the main research questions.

After collecting the data, the researchers will use Reflexive Thematic Analysis Braun & Clarke, 2006) to identify key ideas and themes from the interviews and documents. This involves going through the transcripts several times, carefully coding and grouping similar thoughts to find patterns about how people form their identities. Reviewing the materials this way will help us clearly understand how values shape the identities of everyone involved in the case study.

To collect honest thoughts and experiences, a semi-structured interview guide will be use. This method allowed participants to freely share their own stories and opinions, helping the researchers understand what truly matters to them. With this approach, the researchers could ask important questions and also follow up on interesting ideas as the conversations unfolded. As a

result, we collected rich, real-life insights into how people view the school's values and what happens when those values don't always match their own. These conversations helped us really understand the heart of the research questions and encouraged participants to share their true feelings and experiences. Using this method will also make sure our future findings reflect a wide range of voices, giving us a fuller, more trustworthy picture of how identity works within the school community.

2.3 Research Environment, Population, and Sample

This research will be conducted at a private higher education institution closely connected to the community. The school began as a small institution but has grown over the years into a well-respected center of learning in the community. It's well known not just for strong academics, but also for its dedication to serving others and helping students grow as people. Building good character is woven into everything they do. Students learn about values and ethics alongside their regular subjects, preparing them to make a real difference in the world. Today, the school offers a complete set of scholastic levels, from Grade One through college (*Saint Michael College of Caraga*, n.d.), supporting personal growth and encouraging a love of learning that lasts a lifetime.

This study aims to closely examine how school leaders' values align with—or sometimes differ from—the school's identity. The school provides a meaningful backdrop for this research, having operated for many years and welcomed students who have grown up there, from preschool through college.

The participants in this study will be both students and teachers from the higher education institution located in Nasipit. To ensure meaningful results, the study will focus on students who have studied in the same school from elementary up to college, and on teachers who are actively involved in the daily life and activities of the school. Using purposive sampling, 10-15 students who

have experienced the entire journey at this school will be selected, with the registrar confirming that they are at least 18 years old and meet all other requirements. By choosing long-term members of the school community who are residents of Nasipit, the study aims to gather honest and insightful perspectives from individuals who have internalized the school's values and opportunities. The rationale of selecting only N with Durkheim's theory, which emphasizes that education is a social fact shaped by the local community and environment, and that schools play a crucial role in transmitting shared values and fostering social solidarity among members of a specific locale. This method fosters reliable and insightful responses during data collection, highlighting the institution's fully embraced value in its identity. Ultimately, the study's criteria enhance validity by focusing on participants with the complete educational experience and maturity necessary for meaningful reflection, grounded in the unique social context of Nasipit.

To gather the most complete stories, we included only students who had attended the school from elementary to college. This helped us learn from people who experienced the whole journey at the school. We also included only those who were 18 or older, so the conversations would be more mature and thoughtful. Students who joined the school later—such as in senior high or college—or whose backgrounds did not fit our study were not included. This helped us keep our research focused and consistent, and made sure we gathered insights from people who truly grew and learned within the same school community.

The teacher participants will include at least five educators from the HEI who have been teaching for ten years or more and have long been residents of the local community. This helps make sure they have a deep understanding of how the school works. These teachers were also chosen because they have helped shape the institution's VMGO and have taken part in building the school's role in the community. Their experiences are valuable and important for this study. Moreover, their insights will offer valuable, authentic views on how value alignment or conflict

occurs in the school setting, strengthening the research with reliable, context-specific input from long-term, community-based professionals.

On the other hand, educators with less than 10 years of service and those who were not residents were excluded, as this experience is necessary to understand the institution's growth and impact. Institutions' supporters not connected to the specific higher education institution or who did not meet the service requirement were excluded, to include only those with long-term involvement.

The researchers wanted everyone who will take part in this study to feel comfortable and respected, so they made it clear from the start that joining must be completely voluntary—and leaving is always an option. If someone needed to step away, whether because they got busy, lost interest, or something unexpected happened, we will support their choice right away, always putting their needs first. To keep our future findings meaningful, we will include only the experiences of participants who completed the study from start to finish. Setting these guidelines will help them keep everything fair and ethical, and ensure that the voices shared were from people who were truly involved.

The students and teachers in this study aren't just names on a list—they're at the very heart of the school's story. By really listening to those who have spent so much of their lives shaping and experiencing the school's culture, the researchers hope to share genuine stories about what it's like to belong, to feel accepted, or sometimes, to feel a bit out of place. Their voices bring to life the everyday reality of the school's identity, capturing both the moments of deep connection and the challenges that come along the way.

2.4 Data Analysis Plan

The data collected from in-depth interviews with the selected students and teachers will be analyzed using thematic analysis, a qualitative method well-suited for identifying, analyzing, and reporting patterns within the data (Braun & Clarke, 2006). This approach entails stakeholders' epistemic examination of their opinions regarding the value of the school and dissonance with the school's identity.

Initially, all interviews will be transcribed verbatim to ensure accuracy and completeness. In transcribing, the researchers will remain faithful to the linguistic use of the participants; hence, English, Filipino, or Cebuano shall be incorporated into the transcripts. Afterward, the original transcriptions shall be translated into English.

After transcription, they will follow the steps as indicated by Braun & Clarke (2006). First, they will read multiple times to achieve data immersion and familiarize the researcher with the content. Next, they will carefully read through all the interview transcripts, picking out important words and ideas shared by participants—sometimes using their exact words, and other times interpreting the deeper meaning behind what they say. The researchers will use software like Atlas.ti to help them keep everything organized. After that, they will group similar codes into bigger themes that really capture what people are experiencing and feeling. They will go back and forth, reviewing and adjusting these themes to ensure they truly reflect what participants shared and answer the key questions of the study.

As they analyze the data, the researchers will keep comparing what students and teachers share—looking for where their views on school identity match up and where they differ. To make sure they get things right, they will also do "member checking," which means sharing the early findings with some participants and asking whether our interpretations reflect their real experiences. They will keep careful notes along the way, documenting how they grouped and

understood the stories people told them. In the end, this process will help them truly appreciate how feeling connected to the school's values shapes the identities of everyone involved, especially in a place where those values really matter.

2.5 Ethical Consideration

A. Protection of Intellectual Property Rights (IPR)

This study does not involve the creation of any new technology, product, or process that would require patent protection. The research explores how students and teachers at HEIs align their personal values with the school identity. It is purely qualitative in nature and does not produce any patentable invention or innovation. However, unlike studies that result in technological outputs, this research will produce original written materials, including the interview guide, consent form, transcripts, and analyses. The researchers created the materials and are automatically protected under Philippine copyright law. The team also ensured that all sources and ideas from other authors were properly cited to uphold intellectual property rights. On the other hand, the study did not involve creating or using any brand, logo, or symbol that would

require trademark registration. In contrast to commercial or marketing-focused projects, this research is purely academic, examining students' perspectives of students and teachers regarding the school's identity.

B. Informed Consent

Before conducting the interviews, all participants, including students and teachers from HEI, will be given a clear explanation of the study's purpose, procedures, potential risks, and expected benefits. The researchers will discuss how the study aims to understand how students and teachers align their values with school identity. They will be informed that participation will involve a one-on-one interview lasting around 45 to 60 minutes. The participants will also be told that the study will pose minimal risks, limited only to mild emotional reflection, and that the results may help strengthen the school's value formation programs. The explanation will be delivered respectfully to ensure that participants fully understand the scope of their environment.

Additionally, written consent will be obtained from all participants before the commencement of any interviews. Each will sign an informed consent form after being briefed on their rights, including the right to refuse to participate or withdraw at any time without consequence. As the study involves only human participants, separate ethical approval for animal research is not required. Nonetheless, the researchers will adhere to institutional ethical standards to protect each participant's dignity, privacy, and voluntary participation throughout the study.

C. Data Privacy and Confidentiality

The data for this study will be collected through one-on-one interviews with selected students and teachers of HEI. Each interview will be conducted in a private discussion room to

ensure a comfortable and confidential environment where participants can freely share their thought. Before each interview, participants will be clearly informed that all personal information they provide will be kept private and used solely for research purposes. The researchers will avoid asking unnecessary personal questions and gather only information relevant to the study's objectives. Furthermore, all responses will be handled with the utmost respect and confidentiality to protect the identity and privacy of every participant. Additionally, all participants' data will be anonymized to ensure their privacy. Real names will not be disclosed in the interview transcripts or in the final report. Instead, pseudonyms or assigned codes will be used to identify participants. This approach ensures that individual identities cannot be traced back to specific responses. Moreover, the researchers will take all necessary steps to ensure that no personal information is disclosed at any point in the study. To further maintain confidentiality, all recorded interviews, transcripts, and consent forms will be securely stored in password-protected digital files. Any printed materials will be kept in a locked folder accessible only to the researchers and their thesis adviser. Once the study is completed, all electronic files and printed copies will be deleted appropriately or shredded to ensure the permanent protection of participant information. Finally, the anonymized data will not be shared with any third parties outside the research team. The information gathered will be used exclusively for academic purposes related to this study. However, if data sharing becomes necessary for future scholarly work, explicit written consent from the participants will first be obtained to ensure complete transparency and ethical compliance.

D. Voluntary Participation and Freedom to Withdraw

Participation in the study will be completely voluntary. The students and teachers who will take part will be invited based on their willingness and availability. They will be informed that their

participation will be voluntary and that they will have the right to decide whether or not to join. Furthermore, all participants will be clearly informed of their right to withdraw from the study at any time without facing any negative consequences. Before each interview, the researchers will explain that choosing to cancel or refuse to answer any question will not affect their grades, position, or relationship with the school. This will also be stated in the written consent form to ensure that participants fully understand their rights and freedom throughout the research process.

Additionally, the study did not involve animals or any animal testing. Since the research focused solely on human participants—specifically students and teachers—the consideration of animal alternatives was not applicable. However, the researchers still adhered to general ethical principles such as respect, confidentiality, and voluntary participation to uphold the integrity of the study.

E. Minimization of Harm and Risk Management

The researchers will ensure that no physical, psychological, or emotional harm will occur to any participant. All interview questions will be respectful and will focus solely on experiences related to the school identity. Participants will be free to skip uncomfortable questions or withdraw at any time, while a calm and supportive environment will be maintained throughout the interviews. Furthermore, the study will not involve any animal participants. Since it will focus solely on students and teachers as human respondents, the principles of Replacement, Reduction, and Refinement will not be applicable. Additionally, participants will be able to talk freely to their adviser, guidance counselor, or the researchers if they feel uncomfortable during or after the interview. The researchers will also remain considerate and responsive throughout the process to ensure participants' emotional well-being.

F. Beneficence and Contribution to Knowledge

This research contributes to a deeper understanding of how students and teachers embody and interpret the school identity. The findings aim to help the school strengthen its value formation programs and foster unity within the academic community. Moreover, the study adds to the growing body of literature on character education and institutional values in HEI. In line with this, a summary of the results will be made available to participants who wish to review the findings. The researchers also intend to share the final paper with the school administration and respondents as a gesture of appreciation and to promote transparency in the research process.

G. Justice and Fair Participant Selection

The participants will be chosen using fair and transparent criteria. The researchers will write a formal letter to the school registrar's office to help identify possible participants who will meet the set requirements. The study will include fifteen (15) students who have studied at Saint Michael College of Caraga (SMCC) from elementary up to college, and five (5) teachers who have been teaching at the school for at least ten (10) years. Only those who will meet these qualifications and will willingly agree to participate will be included to ensure a fair and suitable selection for the study. Moreover, the participants will be selected fairly, regardless of gender, age, or social background. The researchers will ensure that everyone who volunteers will have an equal chance to participate and that no one will be discriminated against or mistreated. Lastly, the study will not involve any animal testing or trials, as it will focus only on human participants.

H. Data Integrity and Accuracy

The researchers will follow a systematic process in conducting the interviews and analyzing the participants' responses using Reflexive Thematic Analysis. This approach will ensure that all information will be handled carefully and interpreted truthfully based on the participants' actual statements. In addition, the researchers will acknowledge potential biases and limitations, including the small sample size and the subjective nature of qualitative research. To address these, personal opinions will be kept separate from the participants' views to maintain honesty, objectivity, and accuracy throughout the study.

I. Transparency and Honesty in Reporting

The findings will be presented clearly and truthfully, showing only the participants' genuine responses. The researchers will not alter or exaggerate any information to match personal expectations. Furthermore, all sources, journals, and literature used in the study were cited correctly in accordance with APA guidelines. The researchers also ensured that full credit was given to all authors and that intellectual property rights were respected throughout the research process.

J. Use of Patented or Copyrighted Materials

The researchers will not use any patented technologies or tools that will require special permission for this study. Instead, they will rely on credible academic sources, including books, journals, and online references. Whenever they use published studies or other copyrighted materials, they will give proper credit and will strictly follow all copyright rules. Nothing will be copied or shared without proper acknowledgment or, when needed, permission—making sure they respect the work of others throughout the research.

K. Considerations for Human Subjects

The researchers will make sure that every participant fully understands what to expect in the study. Before starting the interviews, they will explain the research details and will give each participant a consent form to read. They will talk about the possible risks—like feeling uncomfortable talking about specific topics—and also the positive side, such as helping to make school programs better for everyone. Everything will be explained clearly and openly, so people can decide if they want to join. Since this study will only involve people, not animals, they will not need any animal-related approvals.

L. Responsible Use of AI and Other Technologies

They will use AI tools like Grammarly primarily to correct grammar, improve clarity, and fix spelling errors, ensuring the paper will be clear and professional. However, all the ideas, interpretations, and conclusions will be owned by the researchers. They will take care to double-check every suggestion from these tools before deciding to use them. No data, results, or participant responses will be created or changed by AI in any way. Throughout the process, they will maintain full control of the content to protect the study's accuracy and integrity.

M. Ethical Clearance and Institutional Approval

Before starting this research, they will make sure to do things the right way. The study will be carefully reviewed by the Saint Michael College of Caraga Research Ethics Committee (SMCC-REC), which will check that we follow all the proper ethical guidelines and school rules. Only after they submit all the needed documents and receive their official approval will they move forward. The researchers will wait for the committee's green light before beginning any interviews, making sure everything is in place to respect the rights and well-being of everyone involved.

Appendix A: Research Objectives and Interview Questions

This appendix presents the research objectives and corresponding interview questions used in the study. Each objective is accompanied by its corresponding questions, offered in both English and Cebuano.

Research Guide Question (Teacher Participants)

1. **How do the institution's stakeholders perceive the institution's identity (values)?**

   Unsaon pagtan-aw sa mga stakeholder sa institusyon ang identidad (mga hiyas o values) sa institusyon?

   a. Before you entered SMCC to work, how did you characterize the institutional identity of SMCC?

      Sa wala pa ka misulod o nagtuon sa SMCC, giunsa nimo paghulagway ang identidad sa institusyon sa SMCC?

   b. When you entered or studied at SMCC, how did you characterize the institutional identity of SMCC?

      Pagkahuman nimo misulod o misugod og pagtuon sa SMCC, giunsa nimo paghulagway ang identidad sa institusyon sa SMCC?

2. **How does the perception of institutional identity influence the character (personal values) of stakeholders?**

   Unsaon pag-impluwensya sa pagtan-aw sa identidad sa institusyon sa kinaiya (personal nga mga hiyas o values) sa mga stakeholder?

2.1) Before entering SMCC, how would you characterize your character (personal values)?

Sa wala pa ka misulod sa SMCC, giunsa nimo paghulagway ang imong kaugalingong kinaiya (personal nga mga hiyas o values)?

Socially Responsible

a. How did you treat animals in your daily life? Did you show kindness and respect toward them?

Giunsa nimo pag-atiman ang mga hayop sa imong adlaw-adlaw nga kinabuhi? Nagpakita ba ka og pagka-malalaumon ug pagrespeto nila?

b. What actions did you take to help or support the homeless and poor in your community?

Unsa nga mga lihok ang imong gibuhat aron motabang o mosuporta sa mga walay puy-anan ug kabus sa inyong komunidad?

c. How do you practice responsible civic engagement, such as voting or participating in community decision-making, and how do you model this to your students?

Giunsa nimo pagpraktis ang responsableng pag-apil sa mga kalihokan pangkomunidad, sama sa pagboto o pag-apil sa mga desisyon sa komunidad, ug giunsa nimo kini pagpakita o pagmodelo sa imong mga estudyante?

d. How do you show good citizenship, like following rules and helping your community, as a teacher?

Ingon nga magtutudlo, giunsa nimo pagpamahayag ang maayong pagkacitizen, sama sa pagsunod sa mga lagda ug pagtabang sa imong komunidad?

e. How do you show love and pride for your country, and how do you encourage your students to do the same?

Giunsa nimo pagpakita sa gugma ug garbo para sa imong nasud, ug giunsa nimo pagdasig sa imong mga estudyante nga buhaton usab kini?

Missionaries of Christian Values

a. Did you spend time in personal prayer, reflection, or religious activities before?

Nagahin ka ba ug panahon o oras para sa personal nga pag-ampo, paghunahuna, o mga relihiyosong kalihokan kaniadto?

b. In what ways did you help the less fortunate, such as donating items, volunteering, or participating in community service?

Sa unsang mga paagi ka nakatabang sa mga mas nagkinahanglan, sama sa paghatag og mga butang, pag-volunteer, o pag-apil sa serbisyo sa komunidad?

c. How did you show honesty, patience, and respect in your daily life?

Giunsa nimo pagpakita ang pagkamatinud-anon, pagkamapailubon, ug pagrespeto sa imong adlaw-adlaw nga kinabuhi?

Committed Individuals

a. Can you describe how your faith in the Lord guides you in your daily life?

Mahimo ba nimo isaysay kung giunsa ka paggiya sa imong pagtuo sa Ginoo sa imong adlaw-adlaw nga kinabuhi?

b. How has your faith influenced your values or teaching style?

Giunsa pag-impluwensya sa imong pagtuo ang imong mga hiyas o ang estilo sa pagtudlo?

c. Do you have any leadership experiences that influence you today?

Aduna ba kay mga kasinatian sa pagpangulo nga nakaapekto ug unsa ka karon?

Competent in their Chosen Field of Endeavor

a. Before entering SMCC, would you consider yourself innovative (as in doing research) within your field?

Sa wala pa ka misulod sa SMCC, giisip ba nimo ang imong kaugalingon nga inovative (sama sa pagbuhat og research) sulod sa imong natad?

b. Would you consider yourself participative in external events (seminars, training, workshops)?

Giisip ba nimo ang imong kaugalingon nga aktibo sa pag-apil sa gawas nga kalihokan (seminars, training, workshops)?

2.2) When you entered SMCC, how would you characterize your character (personal values)?

Pagkahuman nimo misulod sa SMCC, giunsa nimo paghulagway ang imong kaugalingong kinaiya (personal nga mga hiyas o values)?

Socially Responsible

a. How did you treat animals in your daily life? Did you show kindness and respect toward them?

Giunsa nimo pag-atiman ang mga hayop sa imong adlaw-adlaw nga kinabuhi? Nagpakita ba ka og pagkamaayo ug pagrespeto kanila?

b. What actions did you take to help or support the homeless and poor in your community?

Unsa nga mga lihok ang imong gibuhat aron motabang o mosuporta sa mga walay puy-anan ug kabus sa inyong komunidad?

c. How do you practice responsible civic engagement, such as voting or participating in community decision-making, and how do you model this to your students?

Giunsa nimo pagpraktis ang responsableng pag-apil sa mga kalihokan sa komunidad, sama sa pagboto o pag-apil sa paghimo og desisyon sa komunidad, ug giunsa nimo kini pagmodelo sa imong mga estudyante?

d. How do you show good citizenship, like following rules and helping your community, as a teacher?

Ingon nga magtutudlo, giunsa nimo pagpakita ang maayong pagkacitizen, sama sa pagsunod sa mga lagda ug pagtabang sa imong komunidad?

e. How do you show love and pride for your country, and how do you encourage your students to do the same?

Giunsa nimo pagpakita ang gugma ug garbo para sa imong nasud, ug giunsa nimo pagdasig ang imong mga estudyante nga buhaton usab kini?

Missionaries of Christian Values

a. Did you spend time in personal prayer, reflection, or religious activities before?

Nagahin ka ba ug panahon o oras para sa personal nga pag-ampo, paghunahuna,o mga relihiyosong kalihokan kaniadto?

b. In what ways did you help the less fortunate, such as donating items, volunteering, or participating in community service?

Sa unsang mga paagi ka nakatabang sa mga mas nagkinahanglan, sama sa paghatag og mga butang, pag-volunteer, o pag-apil sa serbisyo sa komunidad?

c. How did you show honesty, patience, and respect in your daily life?

Giunsa nimo pagpakita ang pagkamatinud-anon, pagkamapailubon, ug pagrespeto sa imong adlaw-adlaw nga kinabuhi?

Committed Individuals

a. Can you describe how your faith in the Lord guides you in your daily life?

   Mahimo ba nimo isaysay kung giunsa ka paggiya sa imong pagtuo sa Ginoo sa imong adlaw-adlaw nga kinabuhi?

b. How has your faith influenced your values or teaching style?

   Giunsa pag-impluwensya sa imong pagtuo ang imong mga hiyas o ang estilo sa pagtudlo?

c. Do you have any leadership experiences that influence you today?

   Aduna ba kay mga kasinatian sa pagpangulo nga nakaapekto ug unsa ka karon?

Competent in their Chosen Field of Endeavor

a. After entering SMCC, would you consider yourself innovative (as in doing research) within your field?

   Pagkahuman nimo misulod sa SMCC, giisip ba nimo ang imong kaugalingon nga inovative (sama sa pagbuhat og research) sulod sa imong natad?

b. Would you consider yourself participative in external events (seminars, training, workshops)?

   Giisip ba nimo ang imong kaugalingon nga aktibo sa pag-apil sa gawas nga kalihokan (seminars, training, workshops)?

3. **How do stakeholders react to institutional practices (consonance or dissonance)?**

Giunsa pag-react sa mga stakeholder ang mga praktis sa institusyon (pagkahiuyon o dili uyon)?

Socially Responsible

a. How do you feel about joining the school's environmental activities?

   Unsaon nimo pagbati bahin sa pag-apil sa mga kalihokan sa eskwelahan alang sa kalikupan?

b. What do you think when the school helps others in the community?

   Unsa ang imong hunahuna kung ang eskwelahan motabang sa uban sa komunidad?

Missionaries of Christian Values

a. How do you feel or react when you attend mass that is required by the school?

   Unsaon nimo pagbati o pag-react kung moapil ka sa misa nga gikinahanglan sa eskwelahan?

b. How do you show respect for the school's scheduled prayer time (12 PM, 3 PM, and 6 PM)?

   Giunsa nimo pagpakita og respeto sa naka-iskedyul nga oras sa pag-ampo sa eskwelahan (12 PM, 3 PM, ug 6 PM)?

Committed Individuals

a. What will you feel when the school sends you to a seminar?

   Unsay imong pagbati kung ipadala ka sa eskwelahan sa usa ka seminar?

b. How do you feel about participating in school activities (Foundation Days, Year-End Party, Acquaintance Party, etc.)?

Unsa ang imong pagbati bahin sa pag-apil sa mga kalihokan sa eskwelahan (Foundation Days, Year-End Party, Acquaintance Party, ug uban pa)?

Competent in their Chosen Field of Endeavor

a. How do you feel or what do you usually do when a deadline is approaching, and you still have a lot of tasks left to finish?

   Unsa ang imong pagbati o unsa kasagaran imong buhaton kung hapit na ang deadline ug daghan pa ka nga mga buluhaton nga kinahanglan tapuson?

b. How do you feel when many of your students are not participating in the school's activity?

   Unsay imong pagbati kung daghan sa imong mga estudyante ang wala moapil sa kalihokan sa eskwelahan?

c. What school activity of the school do you enjoy the most?

   Asa nga kalihokan sa eskwelahan ang imong pinaka-nalingaw nga apilan?

Research Guide Question (Student Participants)

1. **How do the institution's stakeholders perceive the institution's identity (values)?**

   Unsaon pagtan-aw sa mga stakeholder sa institusyon ang identidad (mga hiyas o values) sa institusyon?

   a. Before entering or studying in SMCC, how did you characterize the institutional identity of SMCC?

      Sa wala pa ka misulod o nagtuon sa SMCC, giunsa nimo paghulagway ang identidad sa institusyon sa SMCC?

   b. When you entered or studied at SMCC, how did you characterize the institutional identity of SMCC?

      Pagkahuman nimo misulod o misugod og pagtuon sa SMCC, giunsa nimo paghulagway ang identidad sa institusyon sa SMCC?

2. **How does the perception of institutional identity influence the character (personal values) of stakeholders?**

   Unsaon pag-impluwensya sa pagtan-aw sa identidad sa institusyon sa kinaiya (personal nga mga hiyas o values) sa mga stakeholder?

Socially Responsible

2.1 Before studying in SMCC, how would you characterize your character (personal values)?

Sa wala pa ka magskwela sa SMCC, giunsa nimo paghulagway ang imong kaugalingong kinaiya (personal nga mga hiyas o values?

a. Did you practice segregating trash at home or school?

Naga-praktis ba ka sa pag-segregate sa basura sa balay o eskwelahan?

b. Did you try to reduce or avoid using single-use plastics in your daily life?

Nagsulay ba ka sa pagkunhod o paglikay sa paggamit og single-use plastics sa imong adlaw-adlaw nga kinabuhi?

c. Did you participate in tree planting or other activities that help care for the environment?

Nimo ba nga giapilan ang pagtanum og kahoy o uban pang kalihokan nga makatabang sa pag-atiman sa kalikupan?

d. How did you show compassion and care for the elderly in your family or community?

Giunsa nimo pagpakita ang kalooy ug pag-atiman sa mga tigulang sa imong pamilya o komunidad?

Missionaries of Christian Values

a. Before studying in SMCC, did you attend mass with your family, or even by yourself?

Sa wala pa ka nagskwela sa SMCC, nagaapil ba ka sa misa uban sa imong pamilya, o bisan ikaw ra?

b. Have you participated in any religious activities?

Nakaapil ka ba sa bisan unsang relihiyosong kalihokan?

c. How often do you use any inappropriate language?

Unsa ka kasagaran nimo gamiton ang dili angay nga pinulongan?

d. How do you handle roughhousing with others?

Giunsa nimo pag-atubang o pagdumala ang pagpakig away sa uban?

Committed Individuals

a. Can you describe how your faith in the Lord guides you in your daily life?

Mahimo ba nimo isaysay kung giunsa ka paggiya sa imong pagtuo sa Ginoo sa imong adlaw-adlaw nga kinabuhi?

b. How has your faith influenced your values?

Giunsa pag-impluwensya sa imong pagtuo ang imong mga hiyas o values?

c. Do you have any leadership experiences that influence who you are today?

Aduna ba kay mga kasinatian sa pagpangulo nga nakaapekto ug unsa ka karon?

Competent in their Chosen Field

a. Were you participative in class?

Aktibo ba ka sa pag apil sa klase?

b. Were you active in participating in school or external school events?

Aktibo ba ka sa pag-apil sa mga kalihokan sa eskwelahan o sa gawas nga kalihokan sa eskwelahan?

c. Can you give an example of a school task you did well?

Pwede baka maghatag ug example sa mga buluhaton sa eskwelahan nga mayo nimo nga nabuhat?

2.2 When you entered or studied (students) in SMCC, how would you characterize your character (personal values?

Pagkahuman nimo misulod o nagtuon sa SMCC, giunsa nimo paghulagway ang imong kaugalingong kinaiya (personal nga mga hiyas o values?

Socially Responsible

a. Did you practice segregating trash at home or school?

Naga-praktis ba ka sa pag-segregate sa basura sa balay o eskwelahan?

b. Did you try to reduce or avoid using single-use plastics in your daily life?

Nagsulay ba ka sa pagkunhod o paglikay sa paggamit og single-use plastics sa imong adlaw-adlaw nga kinabuhi?

c. Did you participate in tree planting or other activities that help care for the environment?

Nimo ba nga giapilan ang pagtanum og kahoy o uban pang kalihokan nga makatabang sa pag-atiman sa kalikupan?

d. How did you show compassion and care for the elderly in your family or community?

Giunsa nimo pagpakita ang kalooy ug pag-atiman sa mga tigulang sa imong pamilya o komunidad?

Missionaries of Christian Values

a. Did you attend mass with your family, or even by yourself?

Nagaapil ba ka sa misa uban sa imong pamilya, o bisan ikaw ra?

b. Have you participated in any religious activities?

Nakaapil ka ba sa bisan unsang relihiyosong kalihokan?

c. How often do you use any inappropriate language?

Unsa ka kasagaran nimo gamiton ang dili angay nga pinulongan?

d. How do you handle roughhousing with others?

Giunsa nimo pag-atubang o pagdumala ang pagpakig away sa uban?

Committed Individuals

a. Does your faith affect the choices you make? How?

Nakaapekto ba ang imong pagtuo sa mga desisyon nga imong gihimo? Giunsa?

b. How do you show your faith at school or at home?

Giunsa nimo pagpakita ang imong pagtuo sa eskwelahan o sa balay?

c. Have you held any leadership roles in school or organizations? Can you tell me about them?

Nakaposisyon ka ba sa pagpangulo sa eskwelahan o sa mga organisasyon? Mahimo ba nimo isaysay kini?

d. What did you learn from being a leader?

Unsay imong nakat-unan gikan sa pagka-leader?

Competent in their Chosen Field

a. Were you participative in class?

Aktibo ba ka sa pag apil sa klase?

b. Were you active in participating in school or external school events?

Aktibo ba ka sa pag-apil sa mga kalihokan sa eskwelahan o sa gawas nga kalihokan sa eskwelahan?

c. Can you give an example of a school task you did well?

Mahimo ba nimo ihatag ang usa ka pananglitan sa buluhaton sa eskwelahan nga imong nahimo og maayo?

3. How do stakeholders react to institutional practices (consonance or dissonance)?

Giunsa pag-react sa mga stakeholder ang mga praktis sa institusyon (pagkahiuyon o dili?

Socially Responsible

a. How do you feel about joining the school's environmental activities?

Unsa ang imong pagbati bahin sa pag-apil sa mga kalihokan sa eskwelahan alang sa kalikupan?

b. What do you think when the school helps others in the community?

Unsa ang imong hunahuna kung ang eskwelahan motabang sa uban sa komunidad?

Missionaries of Christian Values

a. How do you feel or react when you attend mass that is required by the school?

Unsa ang imong pagbati o reaksyon kung muapil ka sa misa nga gikinahanglan sa eskwelahan?

b. How do you show respect for the school's scheduled prayer time (12 PM, 3 PM, and 6 PM)?

Giunsa nimo pagpakita og respeto sa naka-iskedyul nga oras sa pag-ampo sa eskwelahan (12 PM, 3 PM, ug 6 PM)?

Committed Individuals

a. Have you attended a seminar organized by the school? What do you think or feel about it?

Nakaapil ka ba sa seminar nga gi-organisar sa eskwelahan? Unsa ang imong hunahuna o pagbati bahin niini?

b. Can you share your thoughts about joining different school activities?

Mahimo ba nimo ipaambit ang imong hunahuna bahin sa pag-apil sa lain-laing kalihokan sa eskwelahan?

c. How do you feel about the programs or activities from the Guidance Center, like symposiums?

Unsa ang imong pagbati bahin sa mga programa o kalihokan gikan sa Guidance Center, sama sa mga symposium?

Competent in their Chosen Field

a. Have there been school activities you didn't agree with or didn't like?

Aduna bay mga kalihokan sa eskwelahan nga wala nimo uyonan o wala nimo ganahi?

b. What makes you join or skip the activity?

Unsa may hinungdan nga moapil ka o dili moapil sa kalihokan?

c. Are you aware of the practices of the School?

Nahibalo ba ka sa mga praktis sa eskwelahan?

CHAPTER 3

RESULTS AND DISCUSSION

3.1 Presentation and Analysis of Data

Research Question 1

Research Question 2

Research Question 3

3.2 Proposed Intervention/ Output

DELETE BOX AFTER READING

Check the guidelines in research writing.

Make sure to integrate Mendeley in the citation.

Use Calibri 11 and double space

Begin Presentation of Data by Research Question. Make it BOLD and the discussion normal letters. Example:

1. **What is the profile of the respondents in terms of:**
   - **1.1 Age**
   - **1.2 Sex**
   - **1.3 Monthly Income**

CHAPTER 4

SUMMARY, CONCLUSION, RECOMMENDATION,

4.1. Summary

4.2. Conclusion

4.3.Recommendation

DELETE BOX AFTER READING

Check the guidelines in research writing.

Make sure to integrate Mendeley in the citation.

Use Calibri 11 and double space
