CHAPTER 1

INTRODUCTION

1.1 Project Context

An institutional scholarship program plays an essential role in helping students continue their education by avoiding the financial pressure of tuition and school expenses. It is a hopeful and generous gift, especially for students who might not have much money, which can help them concentrate on their studies and learning in the future. However, despite its importance, many scholars are managed using an antiquated system that relies on a manual process. From applications to qualifications reviews and approvals, most methods are manual, leading to time delays, human error, and inefficiency for administrators and students alike. As a result, errors may occur during the ranking of the qualifiers, leading deserving students to lose their eligible places. In contrast, others who may not fully meet the standards are mistakenly placed first.

Global studies highlight the effectiveness of digitalization in the scholarship application process. According to Vaidya et al. [1], the traditional manual scholarship process remains ineffective, error-prone, and difficult to manage, especially as the number of applicants grows each academic year. The researchers developed a web-based scholarship management system to address the challenges of the traditional scholarship application process. However, gaps remain in extending these solutions to other specific contexts, including a lack of intelligent recommendation functionality and automated evaluation for scholars' retention and ranking, especially in interdepartmental evaluation.

In the local Context, Bagaporo and Espinosa [2] pointed out that paper-based systems are prone to typographical errors, insufficient information, or incorrect documents, which inadvertently disqualify eligible applicants. They also consume a lot of resources and time. For Camarines Sur

Polytechnic Colleges, researchers have developed an online scholarship management system to overcome the challenges posed by the paper-based process. As in the global context, these solutions should be enhanced for other private institutions with specific needs, such as Saint Michael College of Caraga, which provides many institutional scholarship grants in addition to monitoring the semester for awards.

Over the years, the institutional scholarship department has dealt with traditional paper-based applications, especially with the Saint Michael College of Caraga Admission and Scholarship Office. It is in this context that Saint Michael College of Caraga's scholarship program became one of the institution's essential tools for helping poor but deserving students gain access to quality education. However, its management process greatly relies on manual operations. Lack of performance-based, prospective maintenance automation often leads to lag, inconsistencies, and opacity in decision-making. As the number of scholars increases, administrators are facing greater difficulty in monitoring compliance and accurately and precisely evaluating academic performance. Therefore, a reliable digital solution is essential to ensure that the institution can promote an efficient and equitable scholarship program.

To solve this problem, the researchers propose developing a web-based management system using PHP, JavaScript, and MySQL. This system will create a faster and more organized process for handling scholarship applications through a digital platform. It also aims to improve the accuracy and security of confidential data, reducing errors and risks with manual handling [2]. In addition, in the study of a web-based scholarship information system by Prijayanti, Artha, and Arumi, the researchers created an online system to replace the manual and paper-based process used in universities for scholarship applications. Before this system, students had to submit printed forms, grades, and approval papers, which were stored in folders. This process often resulted in lost documents, delays,

and problems in evaluating scholars' performance. The new web-based system makes it possible for students to submit their requirements online, and for staff to review, verify, and approve applications using a central database [3].

This study is important to many stakeholders. For scholars, it promotes a fair, merit-based evaluation process that motivates them to maintain high academic performance and comply with institutional requirements. For administrators and evaluators, the system provides an easy-to-use tool for monitoring, reporting, and evaluating. This helps reduce their workload and reduces the chances of bias or error. For the institution, the system strengthens the scholarship program by ensuring that deserving students meet the criteria and receive the resources they need. Finally, for future researchers and other educational institutions, this project can serve as a model or guide for creating similar systems that improve scholarly management, promote transparency, and support performance-based maintenance processes.

1.2 Review of Related Literature

This section presents a collection of related literature that helps researchers understand and address the problems identified in the study. It examines the concept of digitalization and its effects on processes across different systems, especially in scholarly management. The discussion is organized around three main themes —efficiency, transparency, and fairness —that are essential to any digital transformation effort. These themes explain how technology can ease administrative work, promote accountability, and ensure that decisions are made objectively. Besides highlighting the positive effects of digitalization, this section also includes studies that present critical perspectives. Some researchers warn that overreliance on digital platforms may create new challenges, including system errors, privacy risks, and unequal access among users. By considering both supportive and critical perspectives, this review provides a balanced discussion that situates the

current study within a broader academic context. This allows researchers to build on existing knowledge, identify gaps in previous studies, and justify the need for a more reliable, performance-based scholarly management system.

Digital Process

Bagaporo and Espinosa [1] developed an online scholarship management system for Camarines Sur Polytechnic Colleges that simplified the application, verification, and tracking of scholarship records. Their study highlighted how digitization improved transparency, reduced errors, and increased administrative efficiency. Similarly, Al-Ayyubi and Maulana [2] developed a web-based information system that consolidated records and reduced data redundancy. Both studies align with the theme of leveraging technology to optimize access and efficiency, but they also note gaps such as limited integration and scalability in existing systems. Synthesizing these studies, both works relate to the theme that seizure technology improves access, accuracy, and efficiency in scholarly management, providing a strong case for digitization as a means of modernizing administrative processes.

However, not all scholarship supports the wholesale digitization of processes. Gkrimpizi et al. [4] identified multiple barriers to digital transformation in higher education, including resistance to change, insufficient digital literacy, and poor infrastructure. Robertsone and Lapina [5] also cautioned that digital systems are not a universal solution, as they can exacerbate inequities and inefficiencies when implemented without proper planning. Together, these studies highlight that digitization, while potentially beneficial, carries significant risks if introduced without sufficient institutional readiness. Synthesizing these findings, both studies emphasize that digitization must be strategically planned, adequately resourced, and inclusive to avoid unintended consequences that could undermine its intended benefits.

Email Notification

Using email notifications in scholarship systems helps make communication between students and the office faster and easier. In the study of a comprehensive scholarship and management management system (SCHOGMS) by RSI International [6], the system includes an email feature that automatically sends messages to applicants about their application status, approval, or renewal. The study found that this feature reduced staff workload and helped applicants make updates quickly and correctly. It also made the process more transparent as students could easily track what was happening with their scholarship. Another study, the paperless scholarship disbursement system of IJirset [7], showed the same results. The system used both email and SMS notifications to tell applicants when their application was received, approved, or released. The researchers explained that this saved time for both students and staff and made communication smoother. The scholars became more satisfied as they did not have to visit the office just to ask for updates. In summary, studies show that automated email notifications make scholarly communication faster, clearer, and more reliable. They also reduce errors and help build trust between students and school offices because updates are sent immediately.

In contrast, some scholarship programs still use manual communication methods instead of email notifications. In a review of TESDA scholarship programs targeting the poor [8], it was found that many local offices still use phone calls, printed notices, or face-to-face announcements to inform applicants about their scholarship status. The traditional way of updating students often leads to delays and confusion, especially for those who live far from the office. The study also noted that without email notifications, it becomes more difficult for students to stay informed about deadlines and results.

In another report by the Japan International Cooperation Agency (JICA) titled review of evaluation methods for scholarship programs [9], the same issue is observed. Many schools and agencies still send messages manually using personal or office emails instead of automated systems. Although it keeps communication more personal, it also takes longer and can cause mistakes like sending messages to the wrong person or forgetting to attach documents. Jica explained that the lack of a strong internet connection, limited technology, and privacy policies are some of the reasons why full automation is still not used in many institutions. In summary, these studies show that manual or traditional methods of sending notifications are still common. While they preserve personal communication, it is slower and less efficient, proving that automatic email notifications are better for faster and more organized communication.

1.3 Project Objectives

The main objective of this study is to design, develop, and implement a Web-Based Institutional Scholarship Management System for Saint Michael College of Caraga's Admission and Scholarship Office.

Specifically, it aims to:

1. Allow applicants to submit scholarship applications and requirements online, eliminating the need for walk-in submissions.
2. Automate the ranking of qualifiers based on the exam result, grades, and interview scores.
3. Provide an automated evaluation and reporting module that will facilitate the timely submission of evaluations from heads of offices and generate accurate reports efficiently.

4. Evaluate the system using ISO 25010 Standards to ensure its functionality, efficiency, and usability.

1.4 Scope and Limitations

This study focuses on the creation of the Institutional Scholarship Management System For Saint Michael College of Caraga. The system aims to make the scholarship process easier and faster by allowing students to submit applications online and by automatically ranking qualified applicants based on their test results, grades, and interview scores. It also includes a module where department heads can evaluate the performance of scholars and submit their assessments online. To keep data safe, all user passwords are encrypted before being saved, and the Role-Based Access Control (RBAC) feature ensures that only authorized users—administrators, reviewers, and scholars—can access and perform tasks according to their assigned roles.

The system will only be used for SMCC's Institutional Scholarship Program. It will not include scholarships funded by the government or private organizations. The system will also not have features for handling financial transactions, mobile app access, or other functions outside of scholarship review and maintenance. The pilot test will be conducted only among selected administrators and scholars from SMCC. Because of this limited testing, results may vary if the system is used in larger or different programs.

1.5. Definition of Terms

Automation - This means using technology or a computer system to do tasks automatically instead of doing them manually. In this study, automation helps speed up scholarship processes such as application submission, review, and report generation. This reduces human errors and saves time for both students and staff.

Encryption - This is the process of converting data into a secret or unreadable form to keep it safe from unauthorized access. In this study, encryption is used to protect important information such as student records, login details, and scholarly data from being viewed or stolen by others.

Hash Password – This is a security process that changes or "scrambles" plain-text passwords into a special code before saving them in the database. Once a password is hashed, it cannot be changed back to its original form, making it a one-way and irreversible process. This means that even if someone gains access to the database, they cannot easily read or steal the actual passwords. In the scholarship system, password hashing helps keep the accounts of scholars, administrators, and authorized personnel secure.

ISO 25010 - This is a quality standard used to measure how efficient and effective a system is. It lists important features such as usability, functionality, and efficiency. In this study, ISO 25010 is used to evaluate the Institutional Scholarship Management System of Saint Michael College of Caraga to evaluate how easy it is to use, how well it works, and how quickly it performs.

JavaScript – This is a programming language used to make the system more interactive and dynamic. It allows web pages to quickly respond to user actions without reloading the entire page. In the scholarly system, JavaScript helps create a smoother and more engaging user experience by handling real-time form validation, interactive dashboards, and easy navigation.

MySQL – This is an open-source database management system used to store, organize, and manage all information in the scholarly system. It serves as the main storage area for securely maintaining records, including applicant details, academic performance, examination results, and retention decisions. MySQL enables the system to handle large amounts of data efficiently while keeping everything safe and well-organized. In the scholarship system, MySQL enables users to easily save, update, and retrieve data as needed.

PHP (Hypertext Preprocessor) – It is a server-side scripting language used to develop and manage the back-end functions of the system. It works behind the scenes to ensure that all processes run smoothly. PHP acts as the main foundation or "backbone" of the system's logic, handling important tasks such as processing form submissions, checking user inputs, and communicating with the database to save, update, or retrieve data. In the scholar system, PHP connects the user interface to the database, allowing scholars, administrators, and authorized personnel to perform their tasks smoothly.

RBAC (Role-Based Access Control) – is a security model that grants users access to specific features or information based on their assigned roles. Instead of allowing everyone to use all parts of the system, RBAC limits access based on each user's role. This makes the system more efficient and secure. In the scholar system, RBAC helps to manage the actions of different users. Students can simply submit their scholarship applications and check the status of their submissions.

SMCC (Saint Michael College of Caraga) – Saint Michael College of Caraga, or SMCC, is a private Catholic educational institution located in Nasipit, Agusan del Norte. It is known for its commitment to academic excellence, values development, and community service. In this study, SMCC serves as the primary responder and primary setting where the proposed scholarship system is developed and implemented.

Web-Based System – This refers to an application that can be accessed through a web browser using the Internet, without having to install any software on a computer. It allows users to connect to the system anytime and anywhere, as long as they have an internet connection. A web-based system is convenient and efficient because it can be easily updated, ensures data consistency, and provides secure access for all users.

CHAPTER 2

METHODOLOGY

2.1 Research Design

This study will employ a Design and Development Research Research (DDR) approach, which emphasizes both the systematic creation and evaluation of innovative solutions. Specifically, the DDR approach will guide the development of the Institutional Scholarship Management System For Saint Michael College of Caraga. Through this method, the research aims not only to design and build the system but also to assess its effectiveness in enhancing the operation of the SMCC Admission and Scholarship Office, particularly in monitoring scholars and supporting performance-based retention decisions.

Software Development Life Cycle

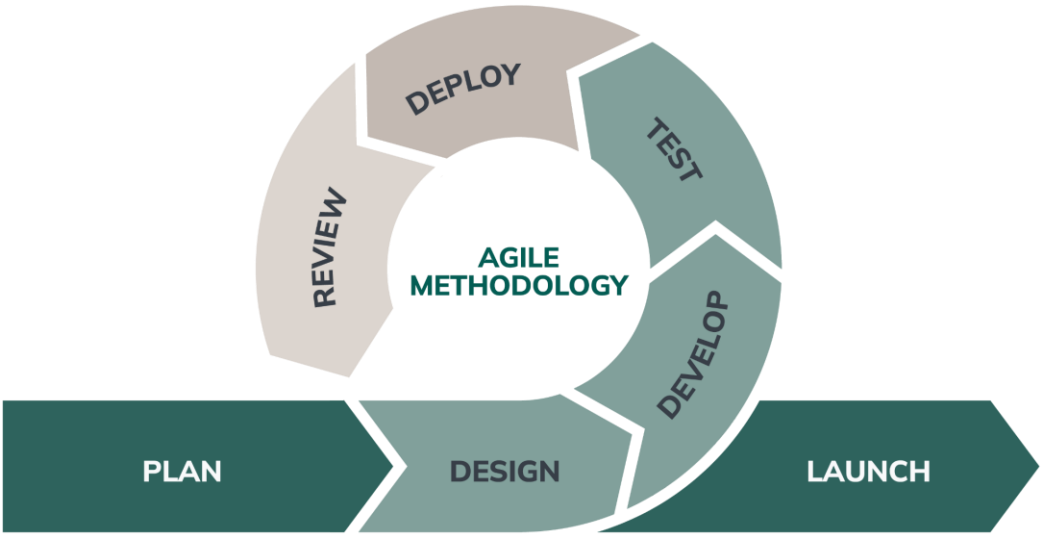

Figure 1. Agile Methodology

Figure 1 illustrates the development of the Institutional Scholarship Management System For Saint Michael College of Caraga that follows the Agile Software Development Life Cycle (SDLC), Agile focuses on flexibility, teamwork, and continuous improvement, making it ideal for systems that must

adapt to user needs. The process is divided into short cycles called Sprints, where features are planned, designed, developed, and tested step by step. It begins with gathering requirements from administrators, panel members, and scholars to identify key functions such as user login, application processing, and report generation. Each sprint produces a working part of the system for testing and feedback, ensuring improvements based on real user experience. Through repeated tests and updates, the system evolves until it is fully deployed and maintained for continuous improvement.

2.2 System Architecture

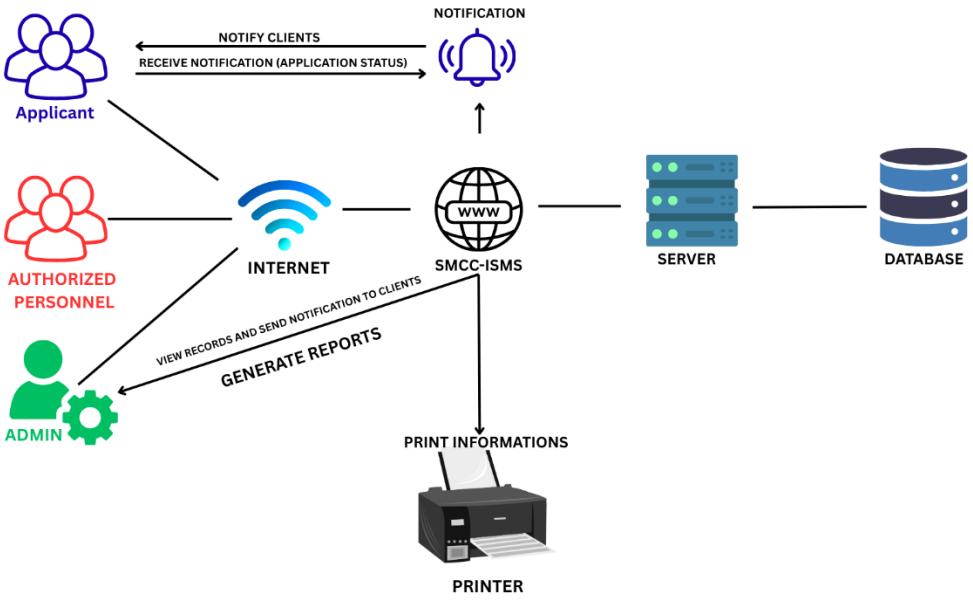

Figure 2. System Architecture

Figure 2 shows the system architecture of the Institutional Scholarship Management System For Saint Michael College of Caraga. It relates to three leading user roles: clients, authorized personnel, and admin. All users interact with the system through the internet, where their requests are handled by the application server and stored in the database server. The system sends notifications to keep users updated, while admin and authorized personnel can manage, verify, and

track records. It also supports printing reports or documents through a connected printer and displaying information on a screen, ensuring smooth data flow and coordination among all users.

2.3 Conceptual Diagram

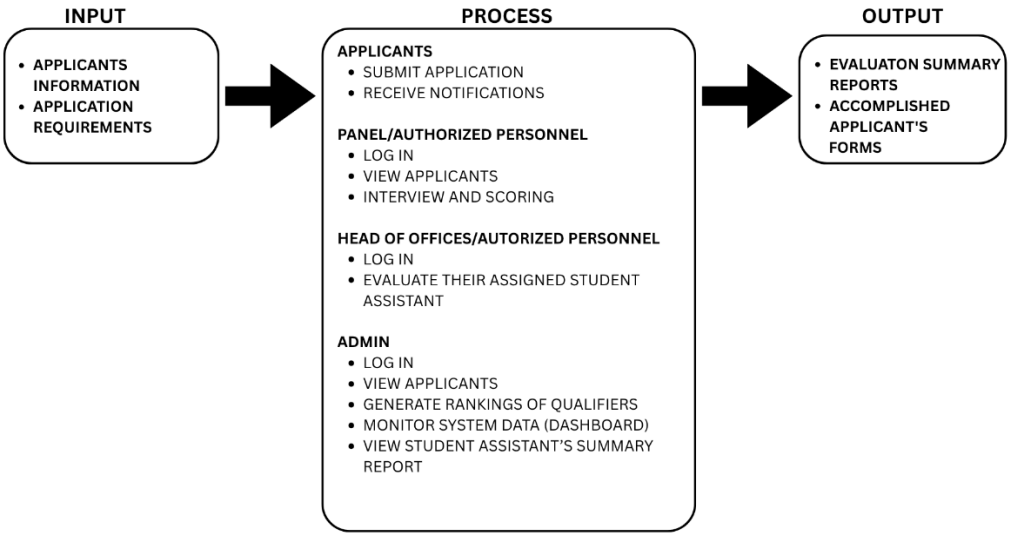

Figure 3. Conceptual Diagram

Figure 3 shows the Institutional Scholarship Management System For Saint Michael College of Caraga, where each user has specific roles and tasks. Applicants fill out application forms, upload required documents, and receive notifications about their status. Panel members or authorized personnel log into the system, review applicants, and conduct scoring interviews. Heads of offices review their assigned student assistants, while admins have full access to manage the system. Admins can log in, view applicants, generate rankings of qualified scholars, print information, create reports, and track data through the dashboard. All these actions work together to produce the system's main results - evaluation and maintenance decisions.

2.4 Use Case Diagram

Figure 4. Use Case Diagram

Figure 4 shows how the four main users of the system—applications, panelists, heads of offices, and admins—interact with it. Applicants can fill out application forms, upload required documents, and receive notifications. Panelists log in, view applicant information, and assign interview scores. Heads of offices log in to review their designated applicants. Admins have the most access; they can log in, view, and review applicants and qualifying rankings, generate reports, and send notifications. Overall, the diagram shows how all users work together to manage applications, reviews, and decisions effectively.

2.5 Activity Diagram

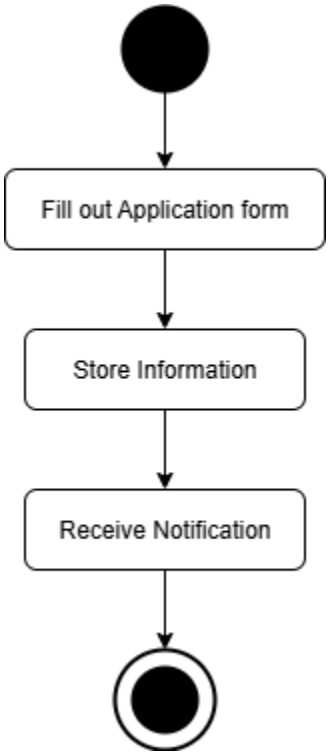

Figure 5. Activity Diagram - Applicant

Figure 5 illustrates the simple and user-friendly process an applicant follows when applying through the system. It begins with the applicant filling out the application form, where they provide their personal and required details. Once completed, the system stores all submitted information securely in the database to ensure proper recordkeeping and easy access for review. After the information is successfully stored, the system automatically processes and updates the applicant's status. Finally, the applicant receives a notification confirming that their application has been received and is under evaluation. This straightforward flow ensures efficiency, reduces manual errors, and keeps the applicant informed every step of the way.

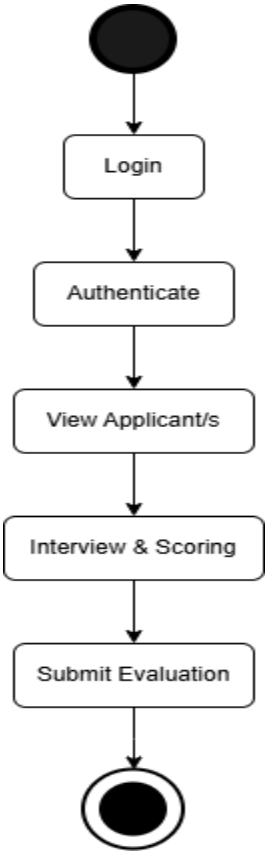

Figure 6 Activity Diagram - Panel

Figure 6 shows the steps a panel member follows when using the system. The process starts with the panel logging in and being verified through authentication. After successfully logging in, the panel can view the list of applicants to be interviewed. The panel then conducts the interview and gives scores based on the applicant's performance. Once the evaluation is complete, the panel submits the scores and feedback through the system. This organized process helps make the evaluation faster, more accurate, and ensures that all applicants data is properly recorded.

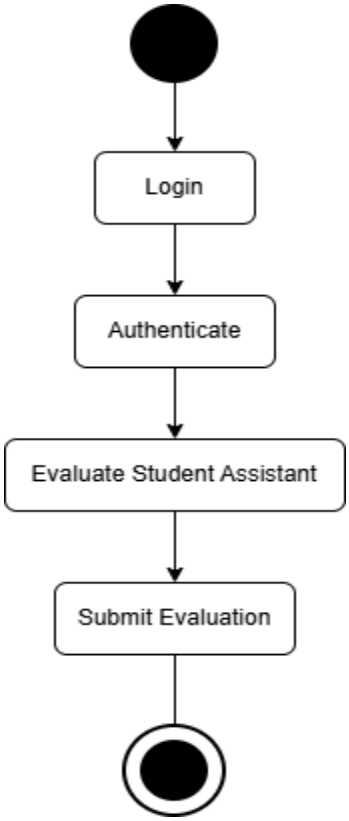

Figure 7. Activity Diagram - Head of Office

Figure 7 shows the simple process that a head of office follows when using the system. It starts when the head of office logs into their account and the system checks their credentials for authentication. Once verified, the head of office can evaluate the performance of a student assistant based on their assigned tasks or duties. After completing the evaluation, the head of office submits the results through the system. This flow ensures that evaluations are done efficiently, securely, and in a consistent way that helps support fair assessment of student assistants.

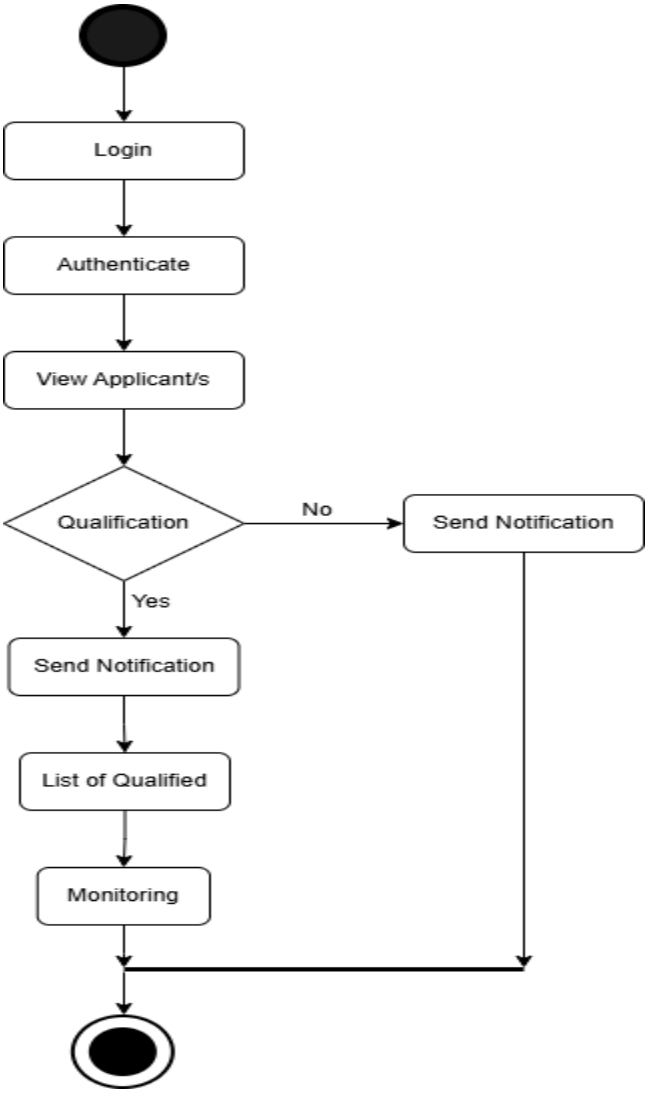

Figure 8. Activity Diagram - Admin

Figure 8 shows how the admin manages applicants in the system. It starts with the admin logging in and being authenticated to ensure secure access. Once logged in, the admin can view the list of applicants and check their qualifications. If an applicant meets the requirements, the admin sends a notification confirming their qualification and adds them to the list of qualified applicants. If not, the admin also sends notification informing them of the result. Afterward, the admin continues monitoring the list and updates as needed. This process helps the admin maintain fairness, transparency, and efficiency in handling application results.

2.6 Sequence Diagram

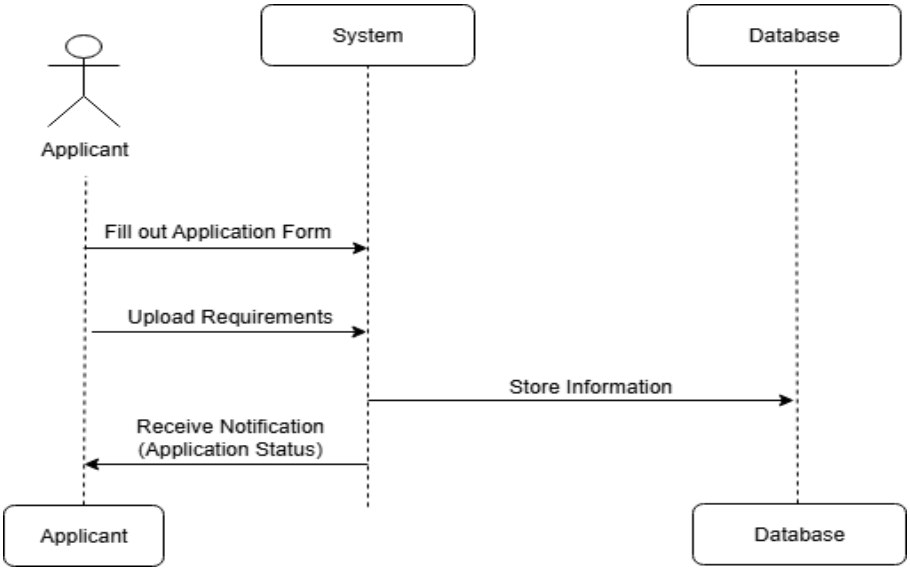

Figure 9. Sequence Diagram - Applicants

Figure 9. shows how an applicant uses the system through a web page and gets updates through a notification or text message. The process begins when the applicant fills the online form and uploads the required documents. After sending the application, the system checks and processes the submission. There are two possible outcomes. If the application is accepted, the system sends a message to tell the applicant about the approval. If it is rejected, a message is also sent to inform the applicant. The applicant can log into the system to see the status of the application at any time. This process ensures that communication is clear, prompt, and fair for each applicant.

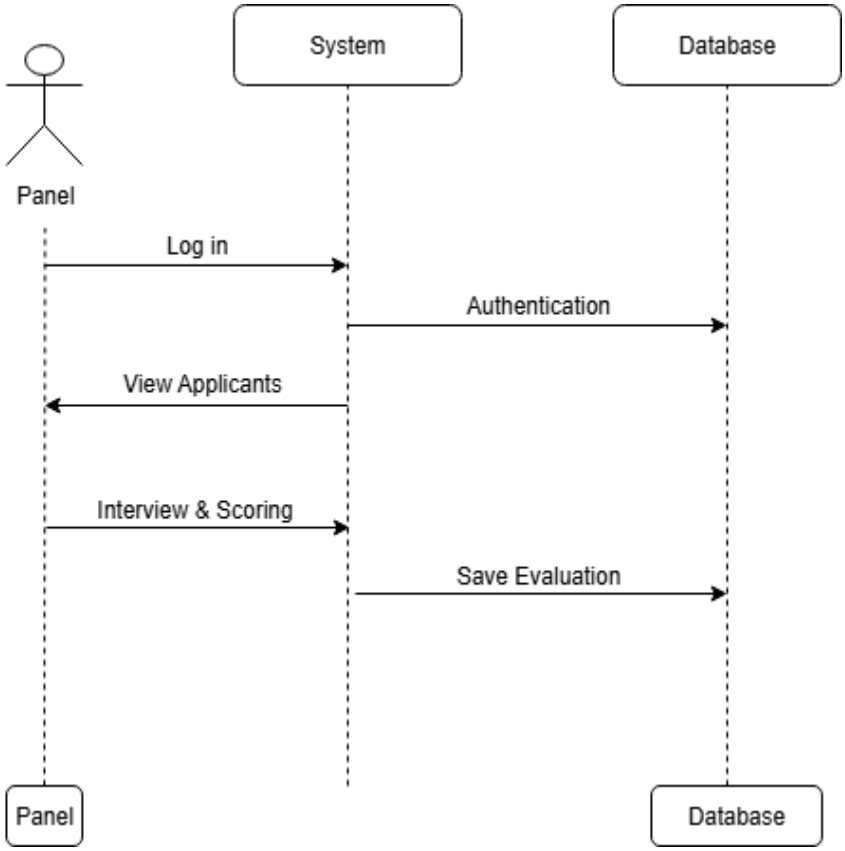

Figure 10. Sequence Diagram - Panel

Figure 10 illustrates how the panel members interact with the system and database during the applicant review process. The process begins when a panel member logs into the system, and their credentials are verified for security. After successfully logging in, the panel member can view applicant information, conduct interviews, and record their evaluation scores. All recorded assessment data is automatically stored in the database to ensure that each interview result is properly saved and accessed when needed. This process helps maintain accuracy, consistency, and transparency in the evaluation of applicants. It also supports data-driven decision making by allowing administrators to review reliable and organized interview records during the selection process.

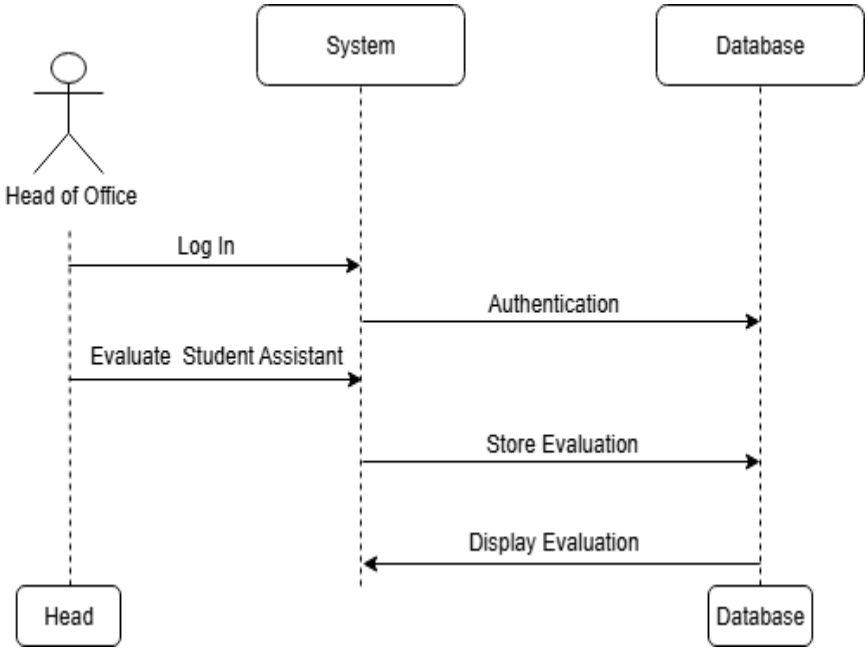

Figure 11. Sequence Diagram - Head Of Office

Figure 11 shows how the head of office or authorized personnel use the system to evaluate their assigned student assistants. The process begins when the head logs are in the system and the analysis begins. After completing the analysis, the system automatically saves the results to the database to keep the information safe and organized. Later, the system retrieves and displays the saved data for the head to check and confirm the results. This process helps ensure that all evaluations are recorded correctly and supports accurate tracking and fair decision making.

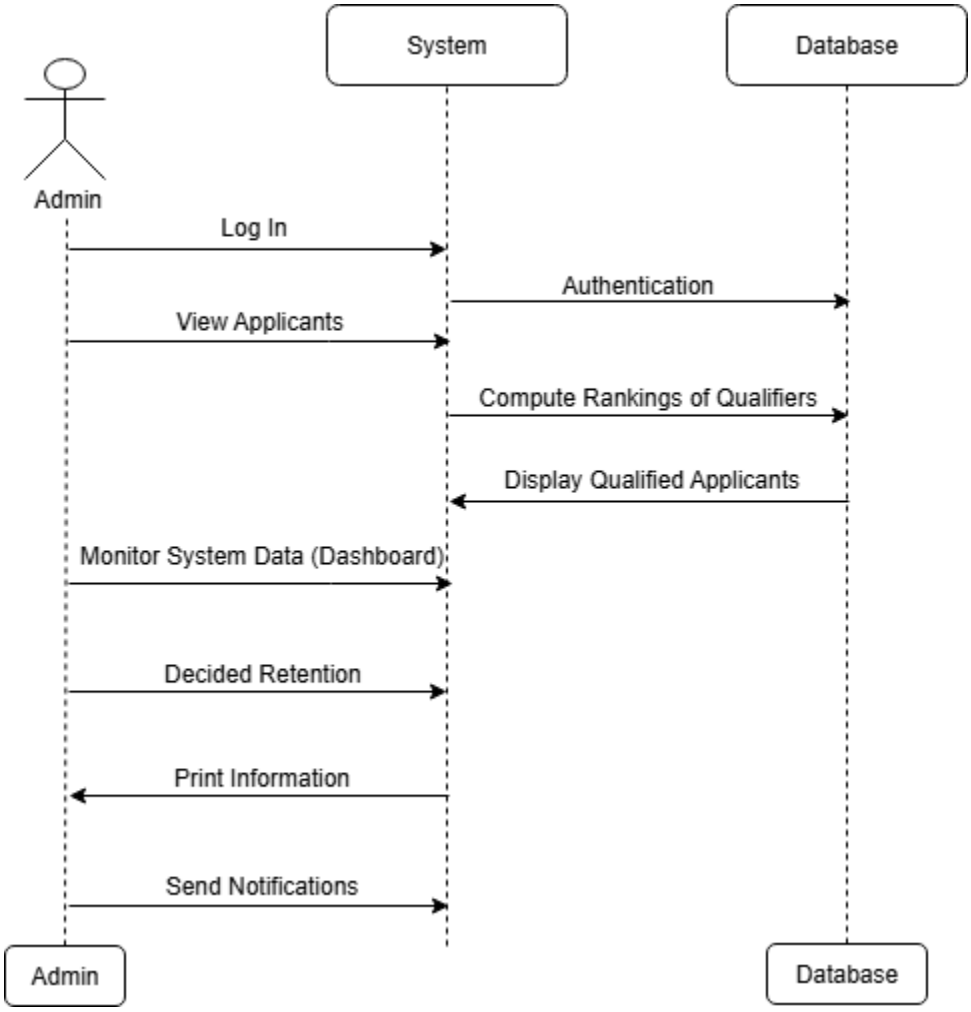

Figure 12. Sequence Diagram - Admin

Figure 12 illustrates the main tasks that an admin can perform in the system. The process starts when the admin logs into their account. After logging in, the admin can view applicant profiles, rank qualified scholars, print applicant information, check system data on the dashboard, and send notifications to users. All these actions follow the maintenance decision process and are saved in the database. This ensures that every review and final decision is properly recorded and can be reviewed as needed. The process helps keep the system organized, secure, and manageable for administrators.

2.7 ERD (Database Design)

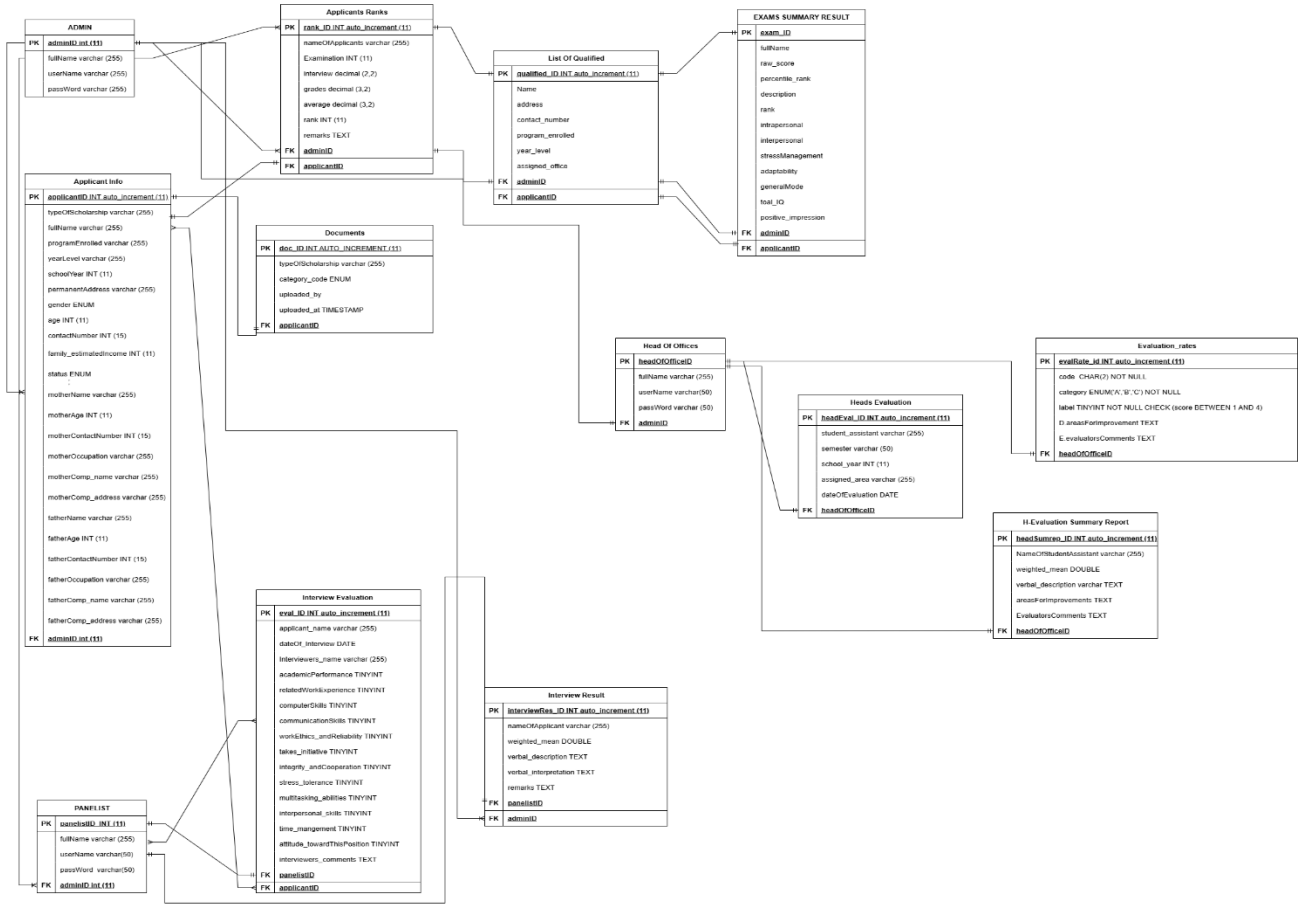

Figure 13. Entity Relationship Diagram

Figure 13 shows the design of the SMCC Institutional Scholarship Management System database, including a performance-based maintenance decision mechanism. It includes several connected entities that manage information about applicants, evaluations, and retention results. The main components of the system are applicant information, applicant ranking, interview evaluation, interview results, documents, and a list of qualifiers, which are linked by primary and foreign keys. Other entities, such as admin, panelists, and heads of offices, support the process by managing evaluations and results. Additional evaluation tables, such as head evaluation, functional skills, criterion, and H-evaluation summary report record, detailed scores, performance data, and comments. The relationships among these entities ensure that all applicant information—academic

performance, interview results, and evaluation decisions—is organized and connected. This structure provides a strong and transparent foundation for scholar selection, ranking, and retention decisions.

2.8 User Interface Design (Prototype)

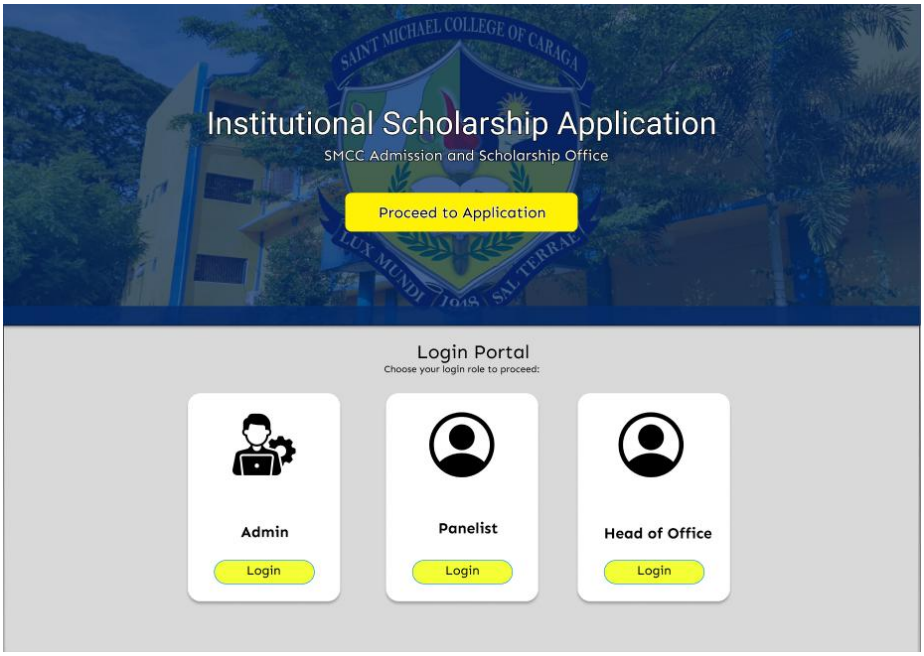

Figure 14. Landing Page

Figure 14 illustrates the official entry point for all users of the platform. It was designed to be simple, intuitive, and accessible to ensure that both administrators and scholarship participants can easily navigate the system. A prominent “Proceed to application” button immediately directs aspiring scholars to the online application form. Below the banner, the login portal provides secure access for different user roles and has a dedicated login button that leads to their respective dashboards, allowing users to perform functions related to their roles and responsibilities.

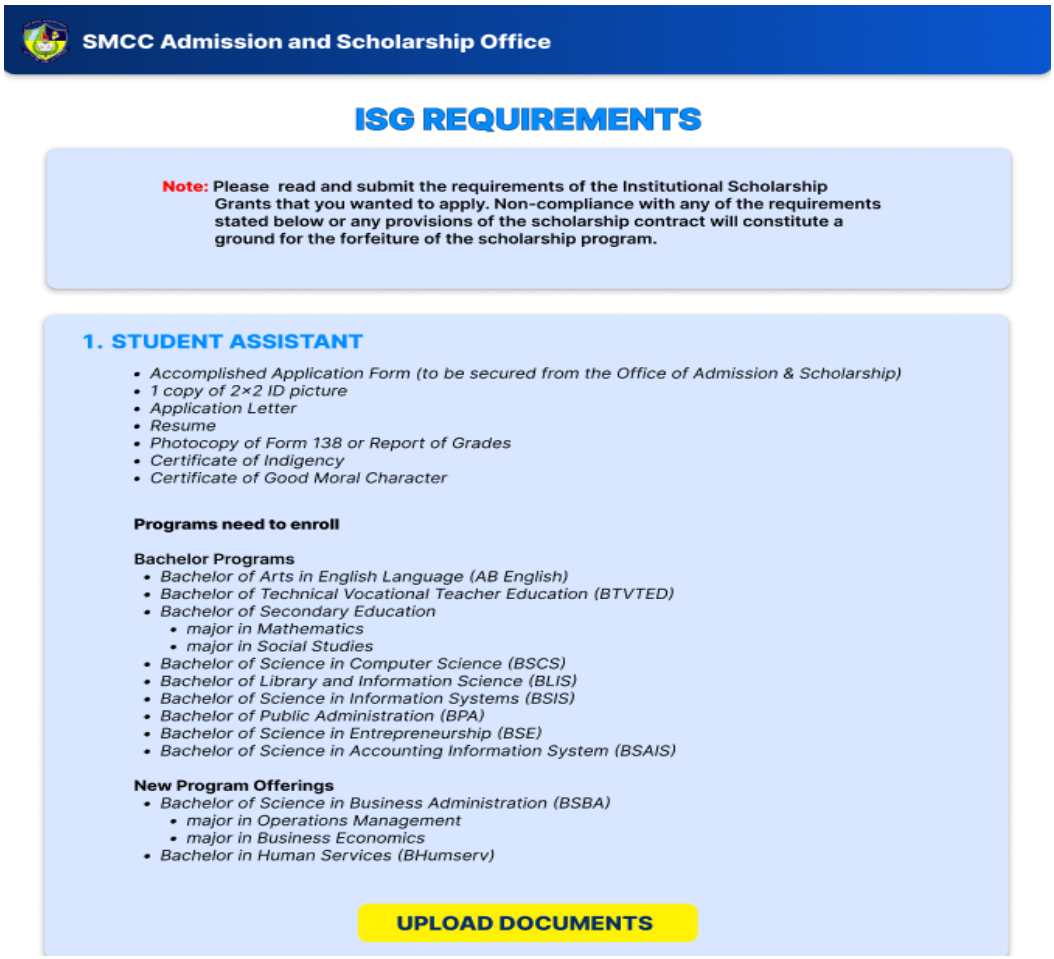

Figure 15. Applicant Side (Viewing and Uploading Requirements)

Figure 15 shows the first step for applicants who wish to apply for the Institutional Scholarship grant at Saint Michael College of Caraga. Upon accessing the page, applicants will be guided through the complete list of requirements they must prepare before submitting their Scholarship application. The interface is designed to be clear, friendly, and easy to follow, helping applicants to understand exactly what documents they need to submit. This section allows the applicants to view what kind of Institutional Scholarship grant they want to apply. Once all the required files are ready, applicants can conveniently upload their documents directly through the upload documents button provided on the page. This upload feature aims to make the process

paperless, faster, and removing the need for physical submission and reducing the risk of misplaced or incomplete application.

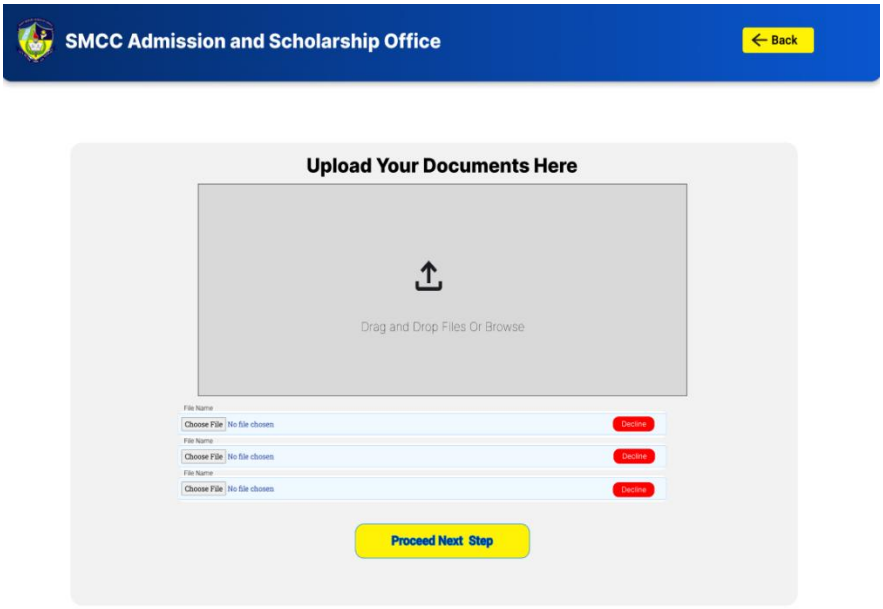

Figure 16. Applicant Side (Upload Requirements)

Figure 16 illustrate applicants to upload their scholarship requirements online. Instead of submitting paperwork in person, students can easily upload their digital files, such as grade reports, letters of recommendation, and other required documents. The upload area accepts via drag-and-drop or by clicking the "Choose File" button. Each uploaded file can be reviewed or rejected if the applicant wishes to change it. Once all the documents are uploaded, the applicant can click "Proceed to Next Step" to proceed to the next part of the scholarship application process. This feature helps the SMCC Admission and Scholarship Office manage and organize requirements more efficiently, reduce paperwork, and make the application process faster and more convenient for both students and staff.

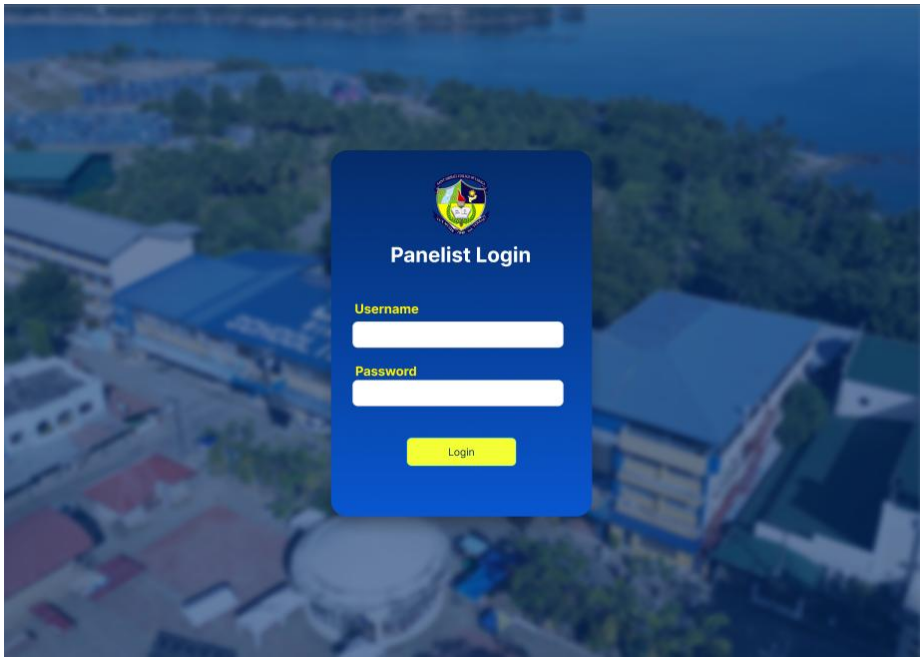

Figure 17. Panel Side (Login Page)

Figure 17 illustrates the secure entry point for authorized evaluators of the scholarship program. Each panelist will be provided with a unique username and password to ensure that only verified users can access applicant data. Upon entering their credentials, panelists will be authenticated through the system before gaining access to their dashboard. This login process will protect the integrity of applicant information and prevent unauthorized access, aligning with the institution's data privacy and confidentiality standards. The page will be designed with a clean and professional interface, reflecting the identity of Saint Michael College of Caraga while ensuring that users can log in easily and securely.

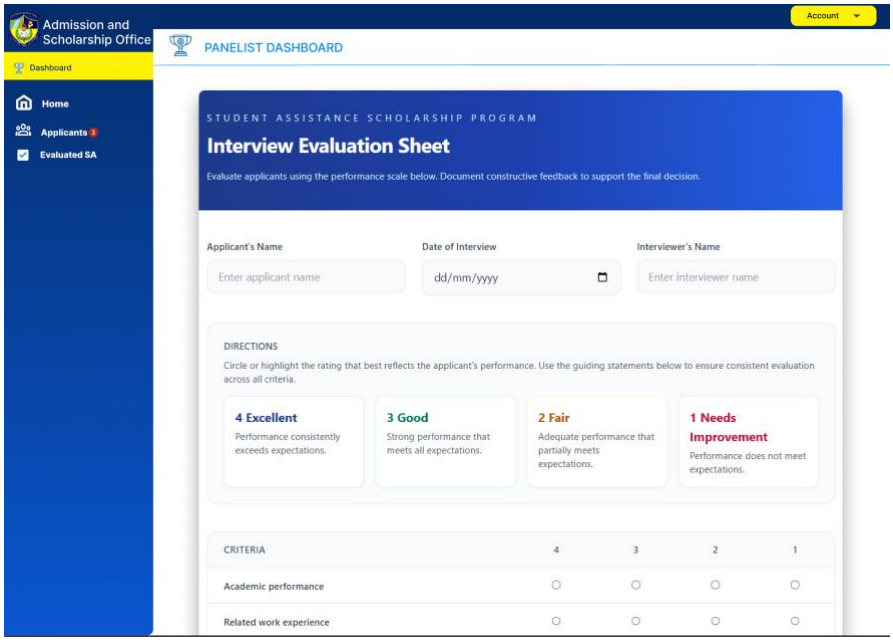

Figure 18. Panel Side (Interview Evaluation Sheet)

Figure 18 shows the Interview Evaluation Sheet, they will be able to record their observations and rate each applicant based on specific performance criteria. The evaluation form will include rating scales from 1(Need Improvement) to 4(Excellent), covering factors such as academic performance, communication skills, related work experience, and overall suitability for the scholarship. This digital form will ensure consistency and fairness in scoring, as all panelists will follow the same structured evaluation process. Once the assessment is completed, the data will be securely stored in the database and automatically linked to the applicant's record. This feature will not only make evaluations faster and more organized but will also provide a reliable foundation for generating reports and making informed retention or qualification decisions.

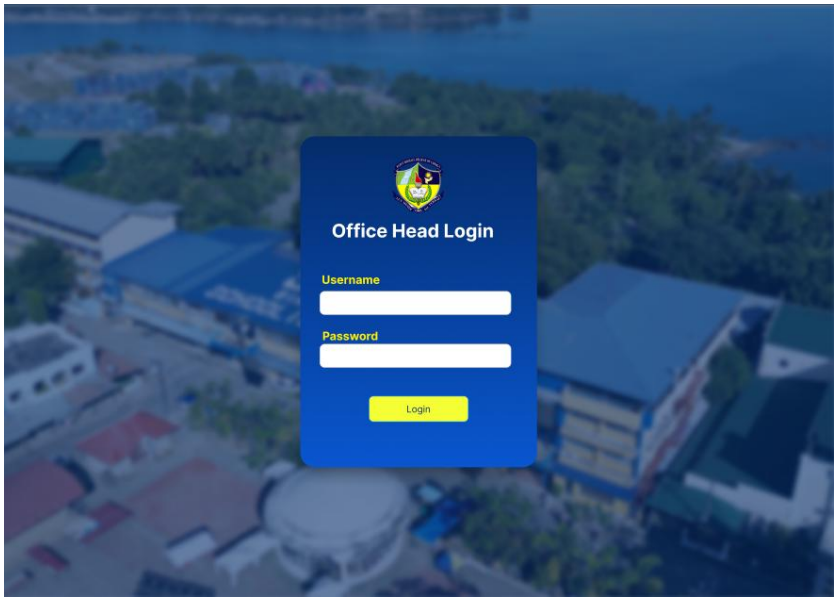

Figure 19. Head of Offices Side (Login Page)

Figure 19 illustrates a secure and user-friendly entry point for department heads or supervisors who are responsible for evaluating the performance of student assistants under their office. Each office head will be provided with a unique username and password to ensure that only authorized users can access the system, protecting sensitive data and maintaining confidentiality in line with institutional policies. The page will feature a simple and professional interface that reflects the identity of Saint Michael College of Caraga, allowing office heads to log in easily and proceed directly to their personalized dashboard. Through this access point, they will later be able to view assigned student assistants, conduct evaluations, and submit performance reports efficiently. Overall, this login page will ensure both security and accessibility, enabling office heads to perform their supervisory tasks smoothly and confidently within the digital platform.

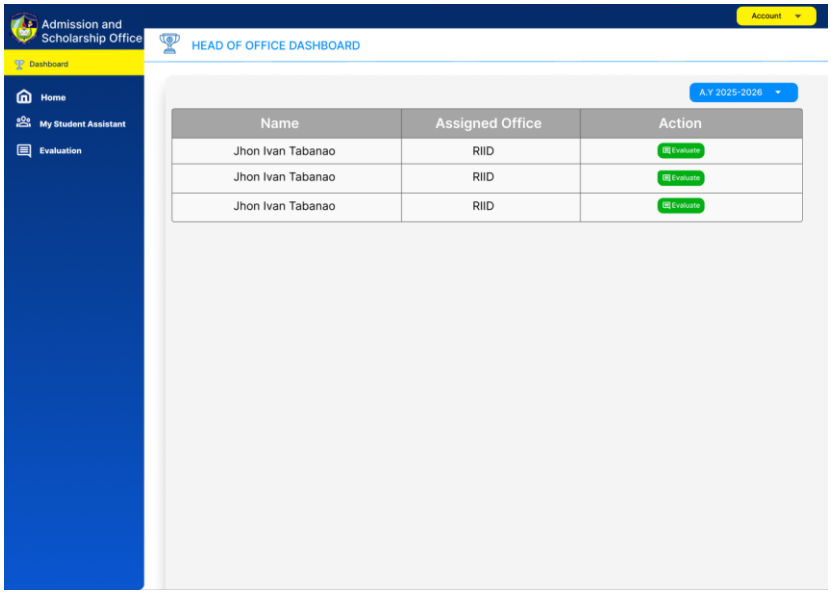

Figure 20. Head of Offices Side (Dashboard)

Figure 20 shows the main interface for department heads or supervisors once they log into the system. Through this dashboard, office heads will be able to view a complete list of their assigned student assistants, including the students' names and designated offices. The interface will provide a clear and organized table format that makes monitoring easier and more efficient. Beside each record is an "Evaluate" button, allowing office heads to proceed directly to the evaluation form for each student assistant. This setup will simplify the process of tracking and assessing performance, ensuring that evaluations are conducted promptly and accurately. The design of the dashboard will focus on clarity, usability, and professionalism, helping office heads carry out their supervisory tasks without confusion or delay. Overall, this page will provide a convenient and secure workspace where evaluations can be managed digitally, promoting fairness, accountability, and consistency in the scholarship supervision process.

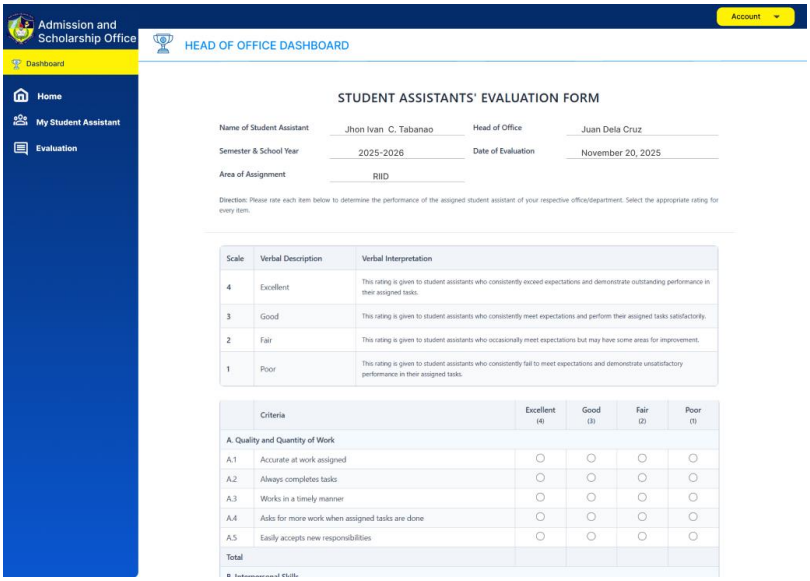

Figure 21. Head of Offices Side (Student Assistants' Evaluation Form)

Figure 21 illustrates the digital workspace for department heads or supervisors once they click the "Evaluate" button from their dashboard. This form will allow the Head of Office to assess each assigned student assistant based on their actual work performance, attendance, and overall behavior in the workplace. It will display the student's basic information such as name, area of assignment, semester, and evaluation date for proper documentation. The form will use a standardized rating scale ranging from 4(Excellent) to 1(Poor), ensuring that all student assistants are evaluated fairly and consistently. Each criterion such as accuracy of work, timeliness, task completion, and acceptance of responsibilities will reflect the student's work ethics and productivity. By using this system, office heads will be able to provide clear, objective, and data-driven evaluations without relying on paper forms. The automated process will promote transparency, efficiency, and accountability in performance assessment, allowing the institution to maintain high standards in its student assistantship program while recognizing students who demonstrate dedication and excellence in their assigned duties.

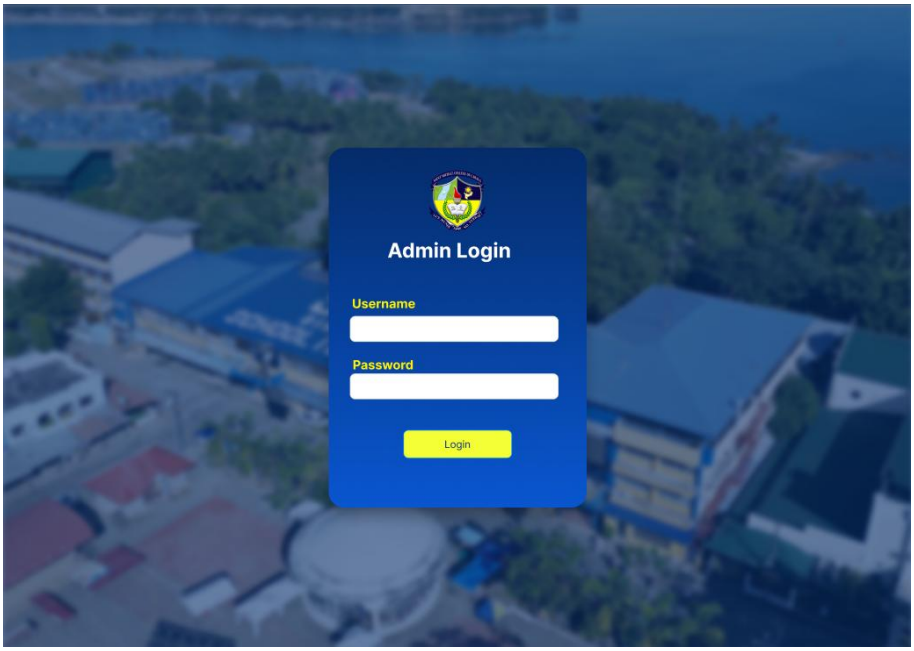

Figure 22. Admin Side (Login Page)

Figure 22 shows the secure entry point for the system administrator, who will be responsible for managing and overseeing the entire scholarship supervisory system. Each admin will have a unique username and password to ensure that only authorized personnel can access and modify sensitive data within the platform. This page will be designed with a clean and professional interface that reflects the institutional identity of Saint Michael College Caraga, providing a sense of trust and formality. Through this login page, administrators will be able to safely access the system's back-end functions, such as managing user accounts, viewing applicant records, monitoring evaluations, and generating reports. The security of the login process will be prioritized to protect confidential scholarship data and ensure that all administrative activities remain well-documented and traceable. Overall, this page will provide a simple yet vital gateway for administrators to perform their duties efficiently while upholding the principles of data privacy, security, and transparency within the scholarship management process.

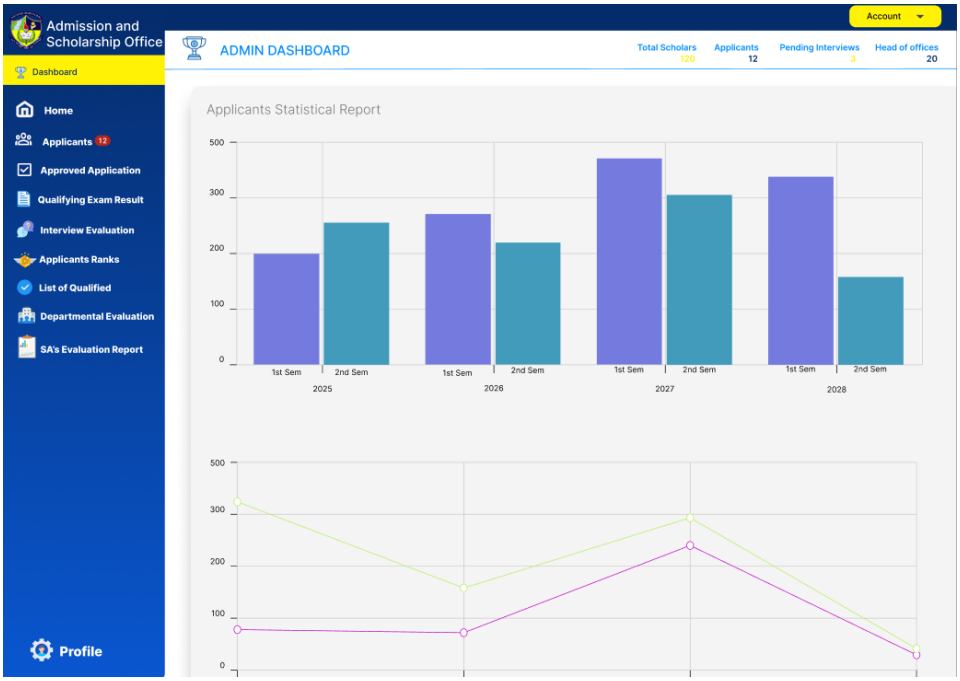

Figure 23. Admin Side (Applicants Statistical Report)

Figure 23 illustrates the central control panel for the scholarship administrator, providing a clear and visual overview of all scholarship-related data and activities. One of its key features will be the Applicant Statistical Reports, which will display graphical summaries of the number of applicants, qualified scholars, and evaluation trends across different semesters and school years. Through bar and line charts, the administrators will be able to easily track fluctuations in scholarship applications and performance over time, helping identity patterns and make data-driven decisions. This visual report will enhance monitoring efficiency by presenting complex information in a simple and understandable format. It will also allow administrators to evaluate the effectiveness of the scholarship program and determine areas that may require improvement or policy adjustment. Overall, the Admin Dashboard will function as an intelligent monitoring hub helping the scholarship office maintain transparency, accuracy, and efficiency in managing institutional scholarship operations.

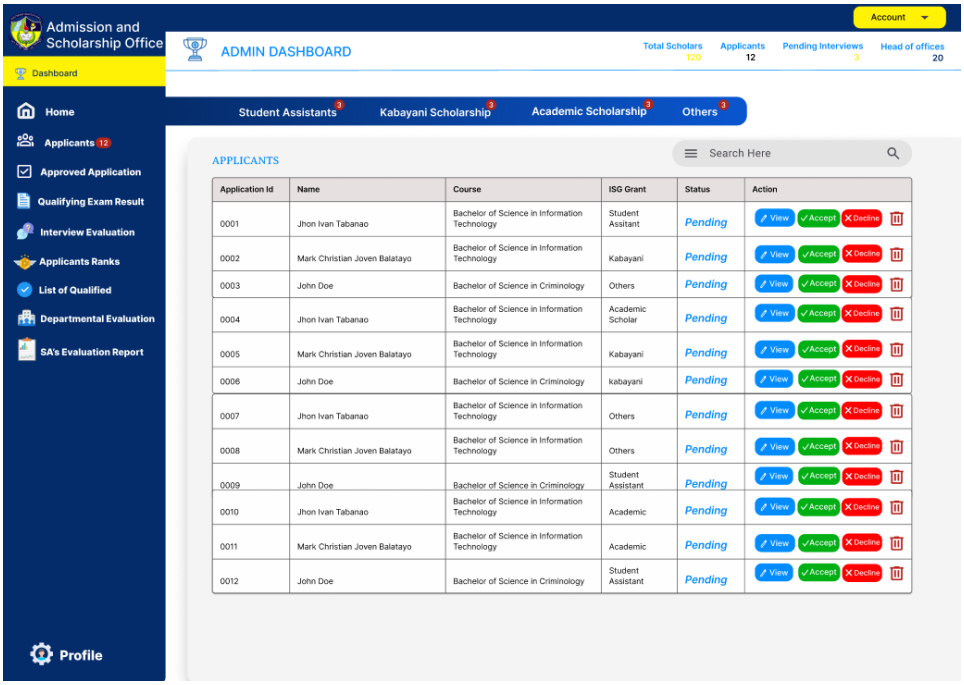

Figure 24. Admin Side (Applicant Management Page)

Figure 24 shows the core features of the system, designed to help the administrator efficiently monitor, verify, and manage all scholarship applications. This page will display a complete list of applicants with important details such as their application ID, full name, course, type of scholarship grant, and current application status. The administrator will also be provided with quick action buttons View, Accept, and Decline to review an applicant's profile, approve qualified applicants, or reject incomplete or ineligible submissions. A built-in search bar category tabs, such as Student Assistant, Kabayanihan Scholarship, Academic Scholarship, Others, will make navigation easier, allowing the admin to filter and locate applications quickly. The interface will be designed to be intuitive and organized, reducing administrative workload and minimizing the chance of oversight or error. Through this feature, the scholarship office will be able to maintain a fair, transparent and systematic approach to screening applicants, ensuring that every decision made is properly documented and based on accurate and verified information.

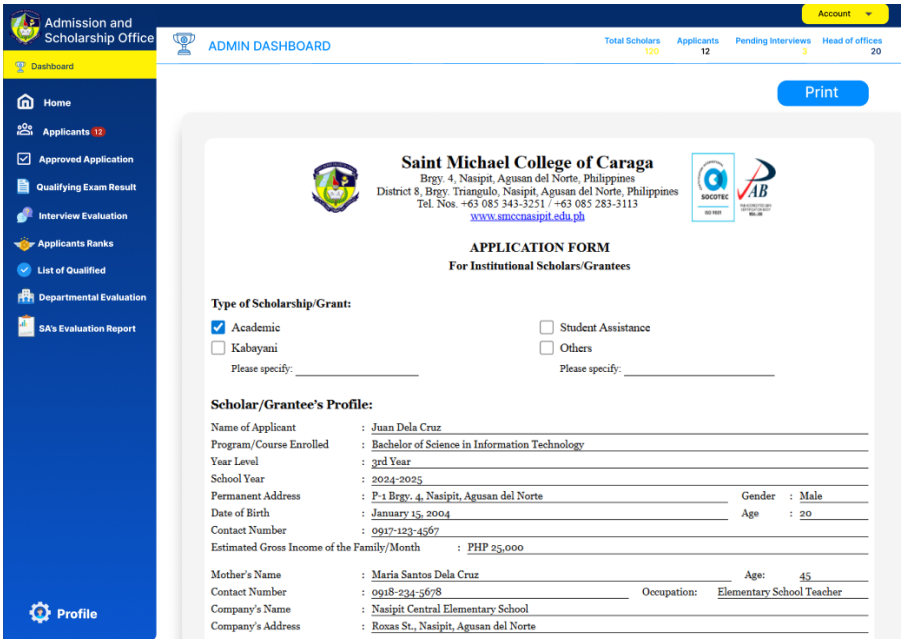

Figure 25. Admin Side (Applicant Profile and Application Form Page)

Figure 25 shows the applicant's chosen type of scholarship grant, whether Academic, Kabayanihan, Student Assistant, or Others, along with their personal and family background, educational program, and financial details. By having access to this digital form, administrators will be able to easily verify the accuracy of the applicant's submitted data and supporting documents before making approval decisions. This page will also include a Print button, enabling the admin to generate a hard copy of the application form when needed for documentation or filling purposes. Designed to reflect the official format of Saint Michael College of Caraga, this page will ensure that all records are consistent, complete, and securely stored within the system. Overall, this feature will simplify the verification process and promote efficiency, transparency, and data integrity in managing applications.

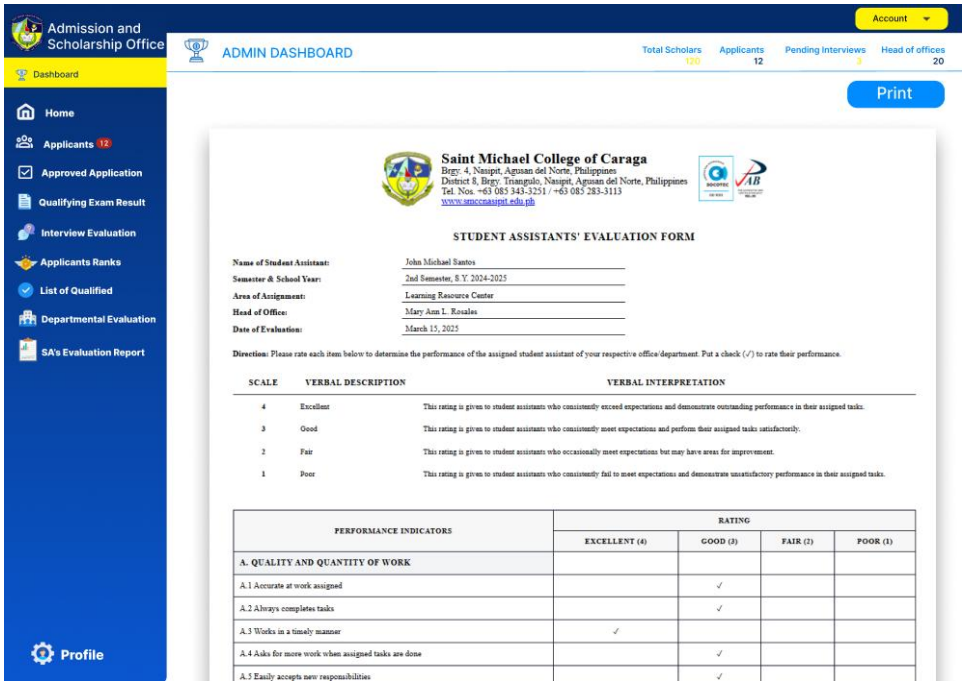

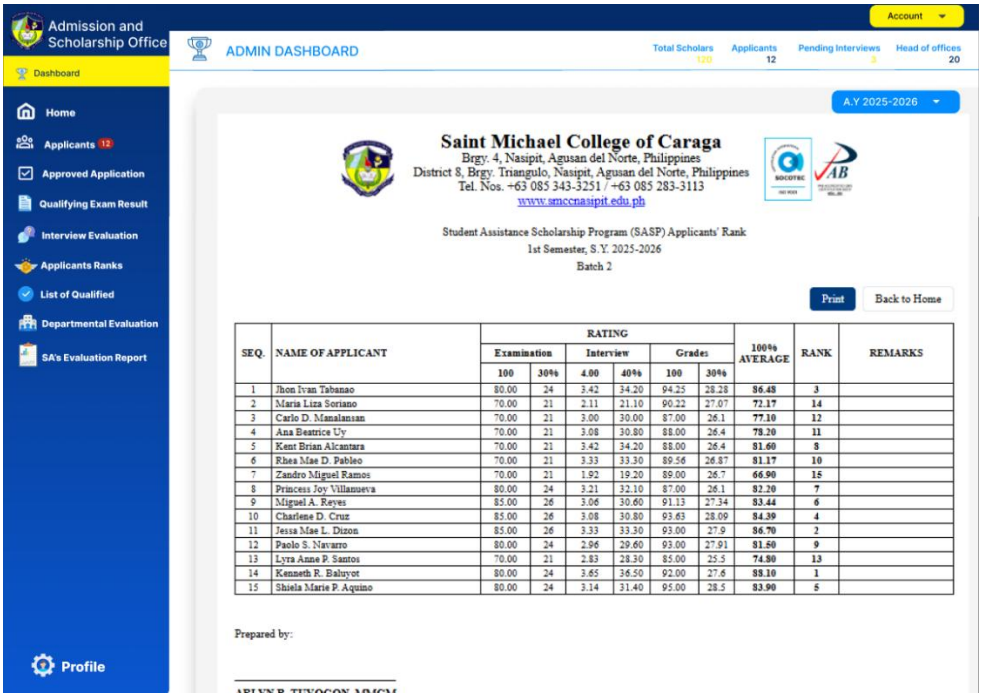

Figure 26. Admin Side (Student Assistant's Evaluation Form Page)

Figure 26 illustrate the key feature within the Admin Dashboard, allowing administrators to view and monitor the performance evaluations submitted by the Heads of Offices. This page will display the official evaluation form of Saint Michael College of Caraga, containing the student assistant's details such as name, semester, area of assignment, head of office, and date of evaluation. It will also present the performance indicators and rating scale ranging from 4(Excellent) to 1(Poor), along with the verbal interpretation of each score. Through this feature, administrators will be able to review the accuracy and completeness of the evaluation, ensuring that assessments are properly aligned with institutional standards. The Print option will enable the admin to generate hard copies for documentation and reporting purposes when needed. Designed with simplicity and clarity, this page will promote transparency and accountability in evaluating student assistants, ensuring that performance records are systematically stored and easily accessible for retention decisions and future reference.

SEQ.	NAME OF APPLICANT	RATING						100% AVERAGE	RANK	REMARKS
		Examination		Interview		Grades				
		100	30%	4.00	40%	100	30%			
1	Jhon Ivan Tabanao	80.00	24	3.42	34.20	94.25	28.28	86.48	3	
2	Maria Liza Soriano	70.00	21	2.11	21.10	90.22	27.07	72.17	14	
3	Carlo D. Manalansan	70.00	21	3.00	30.00	87.00	26.1	77.10	12	
4	Ana Beatrice Uy	70.00	21	3.08	30.80	88.00	26.4	78.20	11	
5	Kent Brian Alcantara	70.00	21	3.42	34.20	88.00	26.4	81.60	8	
6	Rhea Mae D. Pableo	70.00	21	3.33	33.30	89.56	26.87	81.17	10	
7	Zandro Miguel Ramos	70.00	21	1.92	19.20	89.00	26.7	66.90	15	
8	Princess Joy Villanueva	80.00	24	3.21	32.10	87.00	26.1	82.20	7	
9	Miguel A. Reyes	85.00	26	3.06	30.60	91.13	27.34	83.44	6	
10	Charlene D. Cruz	85.00	26	3.08	30.80	93.63	28.09	84.39	4	
11	Jessa Mae L. Dizon	85.00	26	3.33	33.30	93.00	27.9	86.70	2	
12	Paolo S. Navarro	80.00	24	2.96	29.60	93.00	27.91	81.50	9	
13	Lyra Anne P. Santos	70.00	21	2.83	28.30	85.00	25.5	74.80	13	
14	Kenneth R. Baluyot	80.00	24	3.65	36.50	92.00	27.6	88.10	1	
15	Shiela Marie P. Aquino	80.00	24	3.14	31.40	95.00	28.5	83.90	5	

Figure 27. Admin Side (Student Assistants rankings)

Figure 27 shows the generated list of scholarship applicants ranked based on their total evaluation scores in the institutional scholarship management system of Saint Michael College of Caraga. The table shows each applicant's test result, interview score, and academic scores, automatically calculated by the system according to their assigned percentage weight. This feature helps administrators easily identify top performing applicants who qualify for the scholarship program. It also allows for transparent and consistent evaluation, as all scores and feedback are recorded and displayed digitally within the admin dashboard.

Figure 28. Admin Side (List of Qualified)

Figure 28 presents the automatically generated list of qualified applicants for the Saint Michael College of Caraga Student Scholarship Program. This list is displayed through the admin dashboard of the Institutional Scholarship Management System, which shows the important details of the applicant such as name, address, contact number, course enrolled, year level, and their designated office for extension. This feature helps the admissions and scholarship office manage eligible scholars more efficiently. Instead of preparing manual lists, the system organizes and presents data immediately after analysis.

2.9 Software Platforms, Development Environment and Tools

Components	Specification	Usage
Internet Browser	Any	A web browser enables users to easily access and display content from the internet. It is responsible for loading the SMCC Institutional Scholars Supervisory System interface allowing users access to the system's features after a successful login.

Front-end	HTML	HTML defines the structural layout of the SMCC Institutional Scholars Supervisory System's interface, arranging elements like forms, texts, and other important elements.
	CSS	CSS is used for improving the aesthetics and designs of the HTML structure providing a more engaging and responsive website.
	JavaScript	JavaScript has the ability to make the website interactive and provide more functionality for the users, JavaScript is used to handle all client-side functionalities.
	Tailwind	Tailwind is a framework that allows developers to easily design responsive and mobile-first web pages by providing a collection of pre-designed components, grids, and styles to provide a more responsive website regardless of the screen size and device.
	JQuery	jQuery is a quick and efficient JavaScript library that simplifies HTML document manipulation, event handling, animations, and Ajax interactions. It enables developers to write less code for common web tasks and ensures cross-browser compatibility.

Back-end	XXAMP PHP	XXAMP is preferred in back-end development that bundles Apache and PHP, allowing the developers to easily set up a local server environment without complicated installation or configuration. It provides a user-friendly interface and ready-to-use tools that make testing, debugging, and database management more efficient. On the other hand, PHP is a widely used server-side scripting language that is valued for its simplicity, flexibility, and compatibility with various databases and web servers. Its large community support, extensive libraries, and ability to create dynamic, data-driven web applications make it a reliable choice for building the logic and functionalities of a system's back-end.
Server	Apache	Utilizing the XAMPP control panel, developers can manage the behavioral state of its components ensuring smooth and easy access to local host servers like Apache and Database.

3.8 Hardware Requirements

Components	Specification	Usage
Device	RAM (8 GB) Processor (Intel Core i5) SSD (128 GB) Flash Storage (8 GB)	RAM facilitates fast and temporary data storage. It is used to enhance the speed and performance of devices in accessing information. The processor or the CPU, acts as the central component of the computer, handling the execution of instructions sent from the website. It also facilitates the processing of data. Devices employ SSD for storing large amounts of audit files, system software, and reports, while flash storage is commonly used in mobile devices for lightweight data storage. These storage solutions ensure quick retrieval and secure long-term data handling.
Printer	Any Ink Jet Printer Units	Inkjet printers are utilized for printing audit reports, data summaries, and compliance documents, producing clear and high-quality output. These printers are versatile and affordable, making them suitable for regular printing tasks related to audit management, such as generating official documents for internal use or distribution to stakeholders.

System Evaluation

This section describes the different evaluation procedures done to the system to assess its functional suitability, performance efficiency, and usability. The survey instrument is adapted from ISO 25010 Software Product Quality Standards; the test scale gives four options to the respondents and will rate the system based on the question with 4 as the highest and 1 as the lowest.

Data were analyzed and interpreted based on the following parameters:

Table 3

Functional Suitability

Adjectival Rating	Scale Range (Mean)	Verbal Interpretation
4	3.50 – 4.0	Very Functional
3	2.50 – 3.49	Functional
2	1.50 – 2.49	Moderately Functional
1	1.0 – 1.49	Poor Functional

Table 3 presents the criteria used to evaluate a product or system's functional suitability according to the ISO survey.

Table 4

Performance Efficiency

Adjectival Rating	Scale Range (Mean)	Verbal Interpretation
4	3.50 – 4.0	Very Efficient
3	2.50 – 3.49	Efficient
2	1.50 – 2.49	Moderately Efficient
1	1.0 – 1.49	Poor Efficient

Table 4 outlines the scoring parameters used to assess the system's overall performance efficiency in executing its functions and tasks.

Table 5

Usability

Adjectival Rating	Scale Range (Mean)	Verbal Interpretation
4	3.50 – 4.0	Very Usable
3	2.50 – 3.49	Usable
2	1.50 – 2.49	Moderately Usable
1	1.0 – 1.49	Poor Usable

Table 5 presents the scoring parameters used to the usability of the system.

Table 6

Respondent's Distribution

SMCC INSTITUTIONAL SCHOLARS SUPERVISORY SYSTEM WITH PERFORMANCE-BASED RETENTION DECISION MECHANISM

Position	N (Population)	Percentage (%)
Admission Staff	1	12.5%
Panel	1	12.5%
Personnel	2	25%
Student	4	50%
Total	**8**	**100**

Table 6 presents the distribution of respondents who participated in the system review within the SMCC Admission and Scholarship Office. Respondents were grouped according to their positions, with 12.5% admissions staff, 12.5% panel members, 25% staff, and 50% students. The results show that most of the feedback comes from students, who serve as the main users of the system. Their insights are particularly important because they interact directly with the platform, providing practical insights into functionality, efficiency, and user-friendliness in real-world scenarios.

Research Ethical Standards

The researchers affirm their full commitment to upholding the ethical standards of Saint Michael College of Caraga throughout the conduct of this study entitled "SMCC Institutional Scholars Supervisory System with Performance-Based Retention Decision Mechanism". This study

will be carried out with deep respect for human dignity, data privacy, and intellectual honesty. The principles of integrity, transparency, beneficence, justice, and respect for persons will guide all stages of the research process.

A. Protection of Intellectual Property Rights (IPR)

The system to be developed represents the original and creative work of the researchers. It will not infringe on any existing intellectual property or copyrighted material. All outputs-including codes, documentation, and evaluation instruments-will be created by the research team and duly acknowledged under institutional ownership. If certain components require copyright, patent, or open-source compliance, the researchers will ensure that proper documentation, acknowledgement, and permissions are secured in accordance with institutional and legal standards. There is no logo, unique symbols, or brand will be created, so trademark registration is not necessary.

B. Informed Consent

In data collection, all participants will be fully informed of the study's purpose, process, benefits, and potential risks-however minimal these may be. A written informed consent form will be obtained from administrators, evaluators, and scholars who participate in the system testing. The form will explicitly state that participation is voluntary, withdrawal is allowed at any time, and that there will be no negative consequences or discrimination for those who choose not to continue. Ethical clearance from the SMCC Ethics Review Committee will be secured before data processing begins.

C. Data Privacy and Confidentiality

This study strictly followed the Data Privacy Act of 2012 (RA 10173) and the SMCC Data Privacy Policy. All personnel and sensitive information will be stored securely in a password-protected database accessible only to the researchers. All digital data will be encrypted, backed up

responsibly, and disposed of properly after the retention period, protecting every participant's right to privacy and dignity.

D. Voluntary Participation and Freedom to Withdraw

Participation in this study is completely voluntary. All invited participants-SMCC scholars, administrators, and staff-will be given the freedom to decide whether to take part or not. They will be informed that they may withdraw at any time without penalty, prejudice, or loss of any institutional privilege. No under pressure will be exerted; participation will always be based on free will and informed decision-making.

E. Minimization of Harm and Risk Management

The researchers will ensure that no participant will experience physical, psychological, or emotional harm. Activities will be limited to surveys, interviews, and system testing related to user experience and evaluation. There will be no form of discomfort or stress arise, participants will be debriefed compassionately and offered appropriate assistance. Guided by the ethical principle of non-maleficience ("do no harm"), the study will prioritize the well-being of all individuals involved. The researchers will provide a fail safe protocol or instruction should the participants request to do so in times of distress.

F. Beneficence and Contribution to Knowledge

This study seeks to bring meaningful benefit to the Michaelinian academic administrative community. The developed system is intended to promote fairness, transparency, and efficiency in scholarship supervision. Participants and the institution will benefit from an improved technological process that supports informed and performance-based decision-making. The study also aims to contribute to the body of knowledge on educational management and digital governance, embodying the institution's goals.

G. Justice and Fair Participant Selection

Participants will be chosen fairly and solely based on their relevance to the study-administrators, scholarship officers, evaluators, and student scholars. There will be no discrimination on the basis of gender, age, religion, socio-economic background, or academic standing. The selection process will reflect SMCC's commitment to inclusivity, equality, and respect for all individuals.

H. Data Integrity and Accuracy

The researchers commit to reporting findings truthfully, without manipulation, omission, or distortion of results. All external sources, copyrighted materials, and third-party data will be properly cited in accordance with institutional and academic standards. The final manuscript will reflect the genuine outcomes of the research, allowing transparency and accountability to the institution and future researchers.

I. Transparency and Honesty in Reporting

The researchers commit to reporting findings truthfully, without manipulation, omission, or distortion of results. All external sources, copyrighted materials, and third-party data will be properly cited in accordance with institutional and academic standards. The final manuscript will reflect the genuine outcomes of the research, allowing transparency and accountability to the institution and future researchers.

J. Use of Patented and Copyrighted Materials

In the use of academic frameworks, software, or literature, the researchers will comply with relevant copyright and open-source licenses. Any borrowed or adapted material will be properly acknowledged and cited, ensuring respect for the intellectual property of others.

K. Ethical Considerations for Animals and Human Trials

This study involves human participants only; no animal testing or trials will be conducted. Ethical clearance will be obtained from the institution's Research Ethics Committee, ensuring that

all procedures align with institutional ethical guidelines for human subject research. The researchers commit to upholding the dignity, rights, and welfare of every participant in accordance with ethical principles.

L. Responsible Use of AI and Other Related Technologies

The proposed system integrates an AI-driven recommendation mechanism, and the researchers ensured that all applications of Artificial Intelligence (AI) were conducted ethically, transparently, and accountably. During the preliminary phase, ChatGPT was utilized solely to organize ideas, refine conceptual frameworks, and generate recommendations for improving the paper's structure and clarity. SciSpace was used to extract and synthesize essential information from credible and cited scholarly references for the literature matrix, while Grammarly assisted in enhancing the language precision, coherence, and readability of the manuscript without altering its meaning or context. Furthermore, the researchers adhered to the principle that AI serves only as a supportive tool, not a substitute for human judgement, analysis, or authorship. Through these measures, the study ensured that the integration of AI technologies contributed to academic enhancement while preserving ethical standards, intellectual rigor, and the overall integrity of the research process.

M. Ethical Clearance and Institutional Approval

The researchers will secure formal ethical approval from the Saint Michael College of Caraga Ethics Review Committee, confirming compliance with the standards set by the institutional ethical codes for research involving human participants. No data collection or system testing will commence until all ethical and administrative requirements have been fulfilled.
